Vanishing Borders of Urban Local Finance Shyam Nath, Yeti Nisha Madhoo, 2022-10-18 This book examines the emerging trends in vanishing borders of urban local government finance due to uncertain local tax and expenditure regimes It analyzes the global developments with illustrations from state budgetary operations of the Indian federation This trend has

gained momentum due to concentration of population in cities and big towns as a consequence of globalization leading to enhanced environmental vulnerability due to climate change Expanding expenditure needs have not been corresponded by revenue regimes and transfers Moreover involving corporate sector in local area preference initiatives through mandatory corporate social responsibility CSR is an interesting development It is expected to work as a local fiscal additionality to supplement locally provided civic and infrastructure services This additionality may also evolve into public private partnerships at the local level Such development however has the potential of displacing local government operations The focus of the book hinges around critically examining setbacks to fiscal decentralization and challenges in improving the status of urban local finances to enhance fiscal autonomy of these governments particularly in Indian scenario The book also explores the possibility of an expanded role of local fiscal policy in the context of globalization and climate change besides addressing the conventional responsibilities with respect to quality of civic services *Infrastructure and the Complexity of Economic Development* David F. Batten, Charlie Karlsson, 2012-12-06 The book examines the complex relationships between infrastructure and the rest of the economy In particular it focuses on the contentious issue of whether infrastructure investments stimulate productivity growth issues of pricing and ownership and also development problems such as environmental damage Methods range from traditional production function models and compensating variation approaches to nonlinear methods of dynamic analysis There is a unique emphasis on the ability of these different methods to allow for the complex interdependencies involved Six of the fifteen papers deal with these methodological aspects whereas the remainder addresses specific cases or examples in a variety of countries Europe USA and developing countries *Appalachian Legacy* James P. Ziliak, 2012-02-24 In 1964 President Lyndon Johnson traveled to Kentucky s Martin County to declare war on poverty The following year he signed the Appalachian Regional Development Act creating a state federal partnership to improve the region s economic prospects through better job opportunities improved human capital and enhanced transportation As the focal point of domestic antipoverty efforts Appalachia took on special symbolic as well as economic importance Nearly half a century later what are the results Appalachian Legacy provides the answers Led by James P Ziliak prominent economists and demographers map out the region s current status They explore important questions including how has Appalachia fared since the signing of ARDA in 1965 How does it now compare to the nation as a whole in key categories such as education employment and health Was ARDA an effective place based policy for ameliorating hardship in a troubled region or is Appalachia still mired in a poverty trap And what lessons can we draw from the Appalachian experience In addition to providing the reports of important research to help analysts policymakers scholars and regional experts discern what works in fighting poverty Appalachian Legacy is an important contribution to the economic history of the eastern United States Agglomeration Economics Edward L. Glaeser, 2010-04-15 When firms and people are located near each other in cities and in industrial clusters they benefit in various ways including by reducing the costs of exchanging

goods and ideas One might assume that these benefits would become less important as transportation and communication costs fall Paradoxically however cities have become increasingly important and even within cities industrial clusters remain vital Agglomeration Economics brings together a group of essays that examine the reasons why economic activity continues to cluster together despite the falling costs of moving goods and transmitting information The studies cover a wide range of topics and approach the economics of agglomeration from different angles Together they advance our understanding of agglomeration and its implications for a globalized world

 nature cohesion and urban rural relationships Decision Support Systems for urban regeneration Policies and practices of

 emerged from scientific speculation into an environmental threat of worldwide concern Yet the scientific community remains
 uncertain as to the long term trends and effects of climate change and this uncertainty has been seized on as justification for
 inaction by an international community reluctant to bear the costs of policies to reduce greenhouse gas emissions *Valuing
 Climate Change* presents concrete economic evidence of the need for action Fankhauser assesses the costs of a doubling of
 GHG emissions to be a significant percentage of gross world product a figure which he then compares to the costs of
 reducing emissions In his comparison he looks at regional as well as global estimates of damage and takes account of the non
 climate change benefits of GHG reductions such as a switch in the energy sector to cleaner technologies or renewable fuels
 and the impacts on transport with reduced congestion and improved air quality It is clear that the stakes are high and
 Fankhauser believes that tougher targets may be needed than those set out in the Framework Convention on Climate Change
 He assesses the optimum policy responses to GHG reduction the likely instruments for achieving it and the potential for
 international cooperation in dealing with the problems This is a major contribution to the rapidly changing debate on global
 warming *Modeling Spatial and Economic Impacts of Disasters* Yasuhide Okuyama, Stephanie E. Chang, 2013-06-29 This
 volume is dedicated to the memory of Barclay G Jones Professor of City and Regional Planning and Regional Science at
 Cornell University Over a decade ago Barclay took on a fledgling area of study economic modeling of disasters and nurtured

its early development He served as the social science program director at the National Center for Earthquake Engineering Research NCEER a university consortium sponsored by the National Science Foundation and the Federal Emergency Management Agency of the United States In this capacity Barclay shepherded and attracted a number of regional scientists to the study of disasters He organized a conference held in the ill fated World Trade Center in September 1995 on The Economic Consequences of Earthquakes Preparing for the Unexpected He persistently advocated the importance of social science research in an establishment dominated by less than sympathetic natural scientists and engineers In 1993 Barclay organized the first of a series of sessions on Measuring Regional Economic Effects of Unscheduled Events at the North American Meetings of the Regional Science Association International RSAI This unusual nomenclature brought attention to the challenge that disasters largely unanticipated often sudden and always disorderly pose to the regional science modeling tradition The sessions provided an annual forum for a growing coalition of researchers where previously the literature had been fragmentary scattered and episodic Since Barclay s unexpected passing in 1997 we have continued this effort in his tradition *Asia-Pacific Contemporary Finance and Development* William A. New Principles in Planning Evaluation Abdul Khakee, Angela Hull, 2016-12-05

This book provides recently developed and tested methods for assessing the strengths and weaknesses of planning and policy options. Several contributions focus on new substantive areas of concern in planning evaluation including environmental justice and sustainable urban development. Applications of evaluation in several planning contexts are demonstrated and special problems that these pose are assessed. Several chapters address how to communicate the process and results to several stakeholder groups and how to engage these groups in the evaluation process. Each chapter employs a real world case in practice thus dealing with the complexity of applying planning evaluation and providing practical advice useful in similar situations.

Environmental Amenities and Regional Economic Development Todd L. Cherry, Dan Rickman, 2009-12-04

Economic development and the environment are presumed to be in conflict but the latter part of the twentieth century experienced a series of economic changes that increasingly questioned this view. Economic activity became more footloose and the ability to attract productive labor became a prominent regional development concern. Consequently environmental amenities began to have a larger role in determining the patterns of regional growth and development and subsequently moved to the forefront of current regional economic development thought and practice. Environmental amenities provide non pecuniary benefits to area residents and induce in migration flows to regions that possess high levels of environmental amenities. The attraction is particularly strong for those individuals with higher incomes and wealth. The combined forces of increased demand for environmental amenities and increased spatial flexibility of production has brought environmental amenities to the forefront of current regional economic development thought and practice. Regional economic development policy needs to consider the tradeoffs of attracting firms or people which requires an understanding of the role the environment plays directly or indirectly in attracting firms and households. This book presents key papers that explore the role of the natural environment in regional economic development. The papers contain critical insights and information for both researchers and practitioners interested in the nexus between environmental amenities and regional economic growth and development. The book covers varied dimensions of this issue including the relative importance of amenities in recent variation in regional growth, the role of local infrastructure in promoting amenity led development, socio economic distribution concerns and sustainability of amenity based growth and the effects of local environmentally protected areas on other economic activities. This book will be of most value to practitioners and academics specifically related to the areas of environmental economics, regional economic development, local and regional planning, public administration and public policy.
