Trillions Thriving In The Emerging Information Ecology:

Trillions Peter Lucas, Joe Ballay, Mickey McManus, 2012-08-29 We are facing a future of unbounded complexity Whether that complexity is harnessed to build a world that is safe pleasant humane and profitable or whether it causes us to careen off a cliff into an abyss of mind numbing junk is an open question The challenges and opportunities technical business and human that this technological sea change will bring are without precedent Entire industries will be born and others will be laid to ruin as our society navigates this journey There are already many more computing devices in the world than there are people In a few more years their number will climb into the trillions We put microprocessors into nearly every significant thing that we manufacture and the cost of routine computing and storage is rapidly becoming negligible We have literally permeated our world with computation But more significant than mere numbers is the fact we are quickly figuring out how to make those processors communicate with each other and with us We are about to be faced not with a trillion isolated devices but with a trillion node network a network whose scale and complexity will dwarf that of today s Internet And unlike the Internet this will be a network not of computation that we use but of computation that we live in Written by the leaders of one of America s leading pervasive computing design firms this book gives a no holds barred insiders account of both the promise and the risks of the age of Trillions It is also a cautionary tale of the head in the sand attitude with which many of today s thought leaders are at present approaching these issues Trillions is a field guide to the future designed to help businesses and their customers prepare to prosper in the information

Digital Resilience Ray Rothrock, 2018-04-19 In the Digital Age of the twenty first century the question is not if you will be targeted but when Are you prepared If not where does one begin For an enterprise to be fully prepared for the immanent attack it must be actively monitoring networks taking proactive steps to understand and contain attacks enabling continued operation during an incident and have a full recovery plan already in place Cybersecurity expert Ray Rothrock has provided for businesses large and small a must have resource that highlights the tactics used by today s hackers vulnerabilities lurking in networks and strategies not just for surviving attacks but thriving while under assault Businesses and individuals will understand better the threats they face be able to identify and address weaknesses and respond to exploits swiftly and effectively From data theft to downed servers from malware to human error cyber events can be triggered anytime from anywhere around the globe Digital Resilience provides the resilience building strategies your business needs to prevail no matter what strikes

The Oxford Handbook of the Science of Science Communication Kathleen Hall Jamieson, Dan Kahan, Dietram A. Scheufele, 2017-05-17 The proposal to vaccinate adolescent girls against the human papilloma virus ignited political controversy as did the advent of fracking and a host of other emerging technologies These disputes attest to the persistent gap between expert and public perceptions Complicating the communication of sound science and the debates that surround the societal applications of that science is a changing media environment in which misinformation can elicit belief without corrective context and likeminded individuals

are prone to seek ideologically comforting information within their own self constructed media enclaves Drawing on the expertise of leading science communication scholars from six countries The Oxford Handbook of the Science of Science Communication not only charts the media landscape from news and entertainment to blogs and films but also examines the powers and perils of human biases from the disposition to seek confirming evidence to the inclination to overweight endpoints in a trend line In the process it draws together the best available social science on ways to communicate science while also minimizing the pernicious effects of human bias The Handbook adds case studies exploring instances in which communication undercut or facilitated the access to scientific evidence The range of topics addressed is wide from genetically engineered organisms and nanotechnology to vaccination controversies and climate change Also unique to this book is a focus on the complexities of involving the public in decision making about the uses of science the regulations that should govern its application and the ethical boundaries within which science should operate The Handbook is an invaluable resource for researchers in the communication fields particularly in science and health communication as well as to scholars involved in research on scientific topics susceptible to distortion in partisan debate

The Software Society William Meisel, 2013-01-31 Software is driving most technology today from PCs to mobile phones to thermostats Software can evolve quickly and that factor is driving an accelerating pace of change in technology Software is also becoming more tightly connected to humans through advances in dealing with speech and human language as well as being always available through mobile devices As our connection to technology tightens it drives rapid cultural evolution in effect changing what it means to be human Technological change driven by software also impacts our economy in basic ways as computer technology drives more aspects of production marketing services and sales Software advances allow technology to do more tasks formerly requiring humans creating efficiencies productivity enhancements that can grow the economy On the other hand the rapid changes are affecting the economy at a pace that is overcoming human abilities to adapt to the job opportunities available and companies ability to adapt to rapid market changes We are seeing today the impact of that fundamental economic change in persistent unemployment and in stress on some major companies that have historically been solid performers The Software Society digs into these fundamental trends of softwares impact on our culture and our economy It explains the trend to use computer intelligence to enhance our human intelligence and discusses its potential and limitations The book digs into the economic risk caused by automation moving faster than peoples ability to adapt to the change and suggests solutions to address this danger

Automated Ecologies: Towards an Adaptive Ecology of Mind, Material and Intelligent Machines in Architecture? Augustine Ong Wing, 2014-06-21 Popular notions of sustainability in architecture and urbanism idealizes nature as primary over the mediated complexity that is inevitable in a modern city s functioning More specifically contemporary ecological debates and models have failed to sufficiently account for the convergence of computers automation and machine intelligence with the physical and social environments that is gradually

emerging in the post digital condition The following publication takes an ecological view to interpret critically the micro ecology of Amazon s automated warehouses which rely on adaptive machine intelligence which is further examined critically within the framework of cybernetic systems Paradoxically it also happens to thrive within the logic of the dominant global mode of consumption and production which is capitalism Most importantly this relational ecology lies at the intersection of the mediated complexity where the digital and physical worlds meet *Digital Disciplines* Joe Weinman,2015-07-24

Michelle Dennedy, Jonathan Fox, Tom Finneran, 2014-03-04 It is our thesis that privacy will be an integral part of the next wave in the technology revolution and that innovators who are emphasizing privacy as an integral part of the product life cycle are on the right track. The authors of *The Privacy Engineer's Manifesto: Getting from Policy to Code to QA to Value* is the first book of its kind offering industry-proven solutions that go beyond mere theory and adding lucid perspectives on the challenges and opportunities raised with the emerging personal information economy. The authors, a uniquely skilled team of longtime industry experts, detail how you can build privacy into products, processes, applications, and systems. The book offers insight on translating the guiding light of OECD Privacy Guidelines, the Fair Information Practice Principles (FIPPs), Generally Accepted Privacy Principles (GAPP), and Privacy by Design (PbD) into concrete concepts that organizations, software, hardware engineers, and system administrators/owners can understand and apply throughout the product or process life cycle regardless of development methodology from inception to retirement, including data deletion and destruction. In addition to providing practical methods to applying privacy engineering methodologies, the authors detail how to prepare and organize an enterprise or organization to support and manage products, process systems, and applications that require personal information. The authors also address how to think about and assign value to the personal information assets being protected. Finally, the team of experts offers thoughts about the information revolution that has only just begun and how we can live in a world of sensors and trillions of data points without losing our ethics or values and even have a little fun. *The Privacy Engineer's Manifesto* is designed to serve multiple stakeholders. Anyone who is involved in designing, developing, deploying, and reviewing products, processes, applications, and systems that process personal information, including software, hardware engineers, technical program and product managers, support and sales engineers, system integrators, IT professionals, lawyers, and information privacy and security professionals. This book is a must-read for all practitioners in the personal information economy. Privacy will be an integral part of the next wave in the technology revolution; innovators who emphasize privacy as an integral part of the product life cycle are on the right track. Foreword by Dr. Eric Bonabeau, PhD, Chairman, Icosystem Inc., Dean of Computational Sciences, Minerva Schools at KGI.
