B. Synge, 2020-05-30 Historian M B Synge narrates how naval power grew in importance from the 1700s onward playing a decisive role in the victories of several nations and their Empires The advancing technology of shipping made their use in warfare evermore plausible Ships could maneuver faster were better armed with decks devoted to cannon while signals between vessels allowed an admiral or commander to better coordinate his fleet In narrating the histories of several countries Synge demonstrates how ships became both emblematic and instrumental of power the Boston tea party whereby ships were emptied of their cargo in protests against British taxation was a pivotal event leading to the establishment of the USA Prior to the late 1700s ships were mainly viewed in the context of exploration harassment or conquest of coastal settlements or piracies with large scale successes for militaries at sea only rarely seen Yet the stunning victories of Admiral Nelson of England placed naval power at the forefront while the establishment of prospering colonies in places as far flung as Australia made the economic importance of navies obvious In describing a series of battles and events M B Synge builds his common theme that navies would drive change in the world like never before *The Struggle for Sea Power* M. Architects of Continental Seapower Jeremy Stocker, 2020-10-01

This book describes and analyses two iconic figures in twentieth century naval history the German Admiral Alfred von Tirpitz and the Russian Admiral Sergei Gorshkov It examines the men what they thought and wrote about seapower the fleets they created and the strategic consequences of what they did More broadly it draws on the respective histories of the post 1897 Imperial German Navy and the post 1956 Soviet Navy to examine the continental bid for large scale seapower The work

argues that both individuals built navies that did not and could not fulfil the objectives for which they were created Drawing on the legacies of both men the book also develops some wider ideas about the creation of large navies by continental states with cautionary lessons for today s emerging powers India and China Both admirals have received book length biographies but this is the first attempt at a comparative study and the first to draw broader strategic lessons from their respective attempts as continental navalists to challenge maritime states This book will be of much interest to students of naval history strategic studies and International Relations

Twenty-First Century Seapower Peter Dutton, Robert Ross, Øystein Tunsjø, 2013-05-02 This book offers an assessment of the naval policies of emerging naval powers and the implications for maritime security relations and the global maritime order. Since the end of the Cold War, China, Japan, India, and Russia have begun to challenge the status quo with the acquisition of advanced naval capabilities. The emergence of rising naval powers is a cause for concern as the potential for great power instability is exacerbated by the multiple maritime territorial disputes among new and established naval powers. This work explores the underlying sources of maritime ambition through an analysis of various historical cases of naval expansionism. It analyses both the sources and dynamics of international naval competition and looks at the ways in which maritime stability and the widespread benefits of international commerce and maritime resource extraction can be sustained through the twenty-first century. This book will be of much interest to students of naval power, Asian security, and politics, strategic studies, security studies, and IR in general.
