Multiobjective Optimization Jürgen Branke,2008-10-15 Multiobjective optimization deals with solving problems having not only one but multiple often conflicting criteria Such problems can arise in practically every field of science engineering and business and the need for efficient and reliable solution methods is increasing The task is challenging due to the fact that instead of a single optimal solution multiobjective optimization results in a number of solutions with different trade offs among criteria also known as Pareto optimal or efficient solutions Hence a decision maker is needed to provide additional preference information and to identify the most satisfactory solution Depending on the paradigm used such information may be introduced before during or after the optimization process Clearly research and application in multiobjective optimization involve expertise in optimization as well as in decision support This state of the art survey originates from the International Seminar on Practical Approaches to Multiobjective Optimization held in Dagstuhl Castle Germany in December 2006 which brought together leading experts from various contemporary multiobjective optimization fields including evolutionary multiobjective optimization EMO multiple criteria decision making MCDM and multiple criteria decision aiding MCDA This book gives a unique and detailed account of the current status of research and applications in the field of multiobjective optimization It contains 16 chapters grouped in the following 5 thematic sections Basics on Multiobjective Optimization Recent Interactive and Preference Based Approaches Visualization of Solutions Modelling Implementation and Applications and Quality Assessment Learning and Future Challenges
