Treating Psychological Trauma And Ptsd:

Treating Psychological Trauma and PTSD John P. Wilson, Matthew J. Friedman, Jacob D. Lindy, 2012-03-26 This volume presents an innovative psychobiological framework for understanding and treating PTSD. A major emphasis is the need to reformulate diagnostic criteria and treatment goals to reflect emerging knowledge about the complex pathways by which trauma disrupts people's lives. Within a holistic organismic framework, the editors identify 65 PTSD symptoms contained within five rather than the traditional three symptom clusters and spell out 80 target objectives for treatment. Expert contributors then provide detailed presentations of core therapeutic approaches including acute posttraumatic interventions, cognitive behavioral approaches, pharmacotherapy, group psychotherapy, and psychodynamic techniques, as well as approaches to working with specific populations including children, refugees, and the dually diagnosed. The concluding section reviews and synthesizes all case material presented, examining which symptoms are addressed by each of the core approaches, which treatment goals are met, and which clients can most effectively be helped. Combining cutting-edge theoretical exposition with clear-cut recommendations for practice, this is an ideal resource for clinicians, students, and researchers.

Handbook of PTSD Matthew J. Friedman, Paula P. Schnurr, Terence M. Keane, 2023-11 Now in an extensively revised third edition with 65% new material, this is the authoritative reference on posttraumatic stress disorder (PTSD). Contributors examine the breadth of current knowledge on the mechanisms by which stressful events can alter psychological processes, brain function, and individual behavior. Risk and protective factors across development and in specific populations are explored. Reviewing the state of the science of assessment and treatment, the volume covers early intervention and evidence-based individual, couple, family, and group therapies. Conceptual and diagnostic issues are addressed, and key questions for the next generation of researchers are identified. New to This Edition: Thoroughly revised to reflect the accelerating pace of scientific and clinical progress, includes a range of new authors. Chapters on new topics: treatment of PTSD with comorbid disorders and postmortem brain banking. New chapters on previously covered topics including DSM-5 and ICD-11 diagnostic criteria, the psychoneurobiology of resilience, and challenges in implementing clinical best practices. New or updated discussions of such timely issues as treatment of refugees, telemental health, and technology-based interventions.

Treating Trauma Survivors With PTSD Rachel Yehuda, 2008-08-13 In recent years considerable research as well as clinical guidelines based on study findings has been published on the treatment of posttraumatic stress disorder PTSD A gap remains however between the controlled environments and protocols used in intervention research and the more complex and often imperfect settings and situations that clinicians must navigate in daily practice Moreover clinicians routinely see patients whose comorbid substance abuse self destructive behavior or medical illness would likely exclude them from research studies In short although the extensive literature is certainly helpful in articulating the various treatment modalities available to clinicians the strength of the evidence for the efficacy of the treatments and the recommendations and personal preferences of experts the literature does not address the real life dilemmas that clinicians face in attempting to treat trauma survivors What is needed is a way to bridge the gap between research and practice to translate study findings into everyday clinical realities Treating Trauma Survivors With PTSD answers that need Its authors experienced researchers and clinicians who are at the forefront of conceptual discourse on trauma and PTSD are uniquely qualified to offer guidance on these issues Among the specific topics covered are the following Diagnosis and assessment of and treatment planning for trauma survivors with PTSD including clinical presentations related to trauma exposure and PTSD and the implications of comorbid symptoms and disorders Treatment matching in clinical practice how treatment outcome findings can be used to develop profiles for predicting which patients are most likely to respond to which treatments Medications useful in the treatment of PTSD and the strength of the empirical evidence for their efficacy Trauma in children and the efficacy of various treatments including a discussion of how treatment for children differs from that for adults Assessment and treatment of multiply traumatized patients those with both recent trauma and a history of childhood trauma or abuse Treatment of trauma survivors in the acute aftermath of traumatic events including a review of some of the exciting developments in the field regarding risk factors e g normal vs pathological coping responses that influence which individuals are most likely to develop PTSD after such events These topics have never been more relevant than now in the wake of the attacks that shook our country on September 11 2001 It is the authors hope that by reading this book mental health practitioners will gain more confidence in applying the specialized techniques described in empirical studies to their own practices and clinical realities
