Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) Alin Postecă, Shigeyasu Sakamoto, 2017-03-27 Providing a reasonable level of profitability through productivity is and will remain one of the fundamental tasks of the management teams of any production company Manufacturing Cost Policy Deployment MCPD and Methods Design Concept MDC The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness Manufacturing Cost Policy Deployment MCPD and Methods Design Concept MDC Both MCPD and MDC are the result of long time synthesis and distillation being implemented successfully totally or partially in many companies The MCPD system developed by Alin Postecă is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement MCI for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost The MDC developed by Shigeyasu Sakamoto design the effective manufacturing methods using a tool of engineering steps identifying ideas for increasing

productivity called KAIZENSHIRO improvable value as a target The MDC results on production methods lead to effectiveness of work measurement for performance P and to knowledge and improvement of production control and planning as utilization U in order to achieve labor target costs The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing productivity and profitability to increase the competitive level of their manufacturing company **APICS, the Performance Advantage**, 1995 **Manufacturing Cost Policy**

Deployment (MCPD) Profitability Scenarios Alin Posteuca, 2018-10-09 This book shows how to consistently obtain annual and multiannual manufacturing target profit regardless of the evolution of sales volumes increasing or decreasing using the Manufacturing Cost Policy Deployment MCPD system Managers and practitioners within the manufacturing companies will discover a practical approach within the MCPD system that will help them develop and support their long term medium term and short term profitability and productivity strategy The book presents both the basic concepts of MCPD and the key elements of transforming manufacturing companies through MCPD system as well as supporting the consistent growth of external and internal profit by directing all systematic and systemic improvements based on meeting the annual and multiannual Manufacturing Cost Improvement MCI targets and means for each Product Family Cost PFC This book is unique because it presents two types of systematic and systemic improvement projects for MCI that have been applied over the years in various multinational manufacturing companies operating in highly competitive markets in order to address the consistent reduction of unit manufacturing costs by improving the Cost of Losses and Waste CLW Readers will discover the practical approach of MCI based on a structured approach to MCPD system beyond the traditional approach to manufacturing improvements based mainly on improved time and quality Therefore from the perspective of the MCPD system the multiannual manufacturing target profits are met while the annual and multiannual manufacturing target costs are a predetermined stake and not a result of the improvements already made **Total Quality Management for**

Engineers M Zairi, 1991-10-30 Written for practitioners and students with an engineering background this book bridges the gap between their understanding of the techniques of quality control and the wider definition of TQM which is now accepted as a key part of business philosophy Analyzes the relevance of total quality management TQM to changes in the engineering profession in the light of its increased involvement in company practices It presents a broad picture of TQM and its main aspects and explains why it is considered as the major thrust for future competitiveness **Condition-Based Maintenance**

and Residual Life Prediction Chandan Deep Singh, Davinder Singh, Kanwal Jit Singh, Harleen Kaur, 2025-03-10 Condition Based Maintenance and Residual Life Prediction is essential for those looking to effectively implement condition based maintenance strategies and enhance fault detection through a comprehensive understanding of vibration data analysis and residual life prediction addressing key challenges in the field Issues related to condition based maintenance include its high initial cost new techniques that can be difficult to implement due to resistance older equipment that can be difficult to

retrofit with sensors and monitoring equipment and difficult to access equipment during production that is difficult to spot measure Keeping the above issues in mind a general handbook for condition based maintenance and residual life prediction is required to carry out in fault detection Condition Based Maintenance and Residual Life Prediction aims to develop analyze and model condition based maintenance and residual life prediction through vibration data The analysis of vibration responses will aid in developing a fault detection system The sources of vibration may be due to the presence of different types of defects such as cracks in the shaft a bent shaft or misalignment of shafts This will give designers a diagnostic tool for predicting the trends of vibration conditions leading to early fault detection The devised tool will be capable of quantifying the amplitude of vibration based on the severity of defects With the features available in the devised diagnostic tool the proposed model can be used for design predictive maintenance and condition based maintenance *Industrial Transformation* Om Prakash Jena,Sudhansu Shekhar Patra,Mrutyunjaya Panda,Zdzislaw Polkowski,S.
