Security Market Imperfections in Worldwide Equity Markets Donald B. Keim, William T. Ziemba, 2000-03-13 The study of security market imperfections namely the predictability of equity stock returns is one of the fundamental research areas in financial modelling These anomalies which are not consistent with existing theories concern the relation between stock returns and variables such as firm size and earnings to price ratios and seasonal effects such as January and turn of the month This book provides the most complete and current account of work in the area Leading academics and investment researchers have combined to produce a comprehensive coverage of the subject including both cross sectional and time series analyses as well as discussing the measurement of risk and prediction models that have been used by institutional investors The studies cover many worldwide markets including the US Japan Asia and Europe The book will be invaluable for courses in financial engineering investment and portfolio management and as a reference for investment professionals seeking an up to date source on return predictability Trading around the clock : global securities markets and information technology.
