have been an important source of inspiration for new drug development. However, most of the evidence regarding the anti-osteoporosis effects of natural products comes from in vitro and preclinical in vivo studies, and only a few natural products have been used clinically. All of these above mentioned still require rigorously designed studies and further verification.

*The Potential Effects and Mechanisms of Chinese Traditional Medicine on Bone Homeostasis and Remodeling* Jun Liu, Bo Liu, Xiaoqin Wu, Qi Wang, 2023-09-20. Osteoporosis is a systemic skeletal disease strongly affecting postmenopausal women and characterized by an increased risk of bone fragility and a decrease in bone mass. Bone homeostasis requires a balance between bone-forming osteoblasts and bone-resorbing osteoclasts. When this balance is impaired, normal bone remodelling cannot keep bone mass stable, leading to osteopenia and osteoporosis. About 30-50% of all women in the world suffer from fractures due to osteoporosis throughout their lives. The treatments include improving metabolic abnormalities through complementary and alternative therapies, drug application, and surgical therapy for the management of overweight, obesity, and hormone metabolism disorder. Chinese traditional medicine has been increasingly considered as an effective therapy for osteoporosis. A series of formulae, herbs, and natural products have been indicated for their effects in the prevention and treatment of osteoporosis, such as Liu Wei Di Huang Wan formula, Morinda officinalis Radix herb, Longspur epimedium glycoside natural product. However, the mechanisms of action remain largely unexplored. **Xie's Chinese Veterinary**
