Neuro-detection: Advancements in Pattern Detection and Segmentation Techniques in Neuroscience

Najib Ben Aoun,Ziliang Ren,Sadique Ahmad ,Ridha Ejwali,2025-10-14 Neuroscience is a rapidly advancing field that seeks to understand the complexities of the human mind and brain One avenue of this research focuses on the detection and segmentation of neural patterns which can provide insights into cognitive functions disease states and treatment effects These techniques demand the synthesis of numerous evolving fields including machine learning artificial intelligence and medical imaging Despite considerable progress significant challenges remain requiring innovative solutions leveraging cutting edge technologies This Research Topic aims to address the ongoing challenge of advancing pattern detection and segmentation techniques in neuroscience As the complexity of neuronal data

increases a growing necessity for novel algorithms and machine learning techniques is evident This topic seeks to bring together researchers from various fields to share their groundbreaking methods and innovative results in detecting and segmenting neural patterns The ultimate goal is to refine our understanding of neural patterns enhance modeling capabilities and establish a foundation for future neuroscience research and clinical applications This Research Topic invites contributions addressing but not limited to the following themes

Advances in Detecting Brain Patterns Focuses on new AI algorithms that drive our understanding of brain patterns

Methods of Applying Segmentation Discusses improvement and challenges in data segmentation in neuroimaging

AI s Role in Identifying Neural Patterns Showcases how AI and machine learning contribute to identifying brain patterns

Neuroimaging Tools and Techniques Explores applications of fMRI CT scans DTI and combination methods in studying brain patterns

Insights from Pattern Detection Highlights practical applications of pattern detection aiding in understanding cognitive processes and early detection of neurological diseases

Real life Implications and Applications Details the practical uses of advanced techniques in detecting neurological diseases and personalizing treatment plans

Please be aware that manuscripts emphasizing data synthesis neuroimaging methods and the integration of informatics to analyze and interpret complex neural data must be submitted to *Frontiers in Neuroinformatics* while those focusing on advanced algorithms AI techniques and machine learning applications specifically tailored for pattern detection and segmentation in neuroscience should be directed towards submission to *Frontiers in Computational Neuroscience*

We welcome various manuscripts including original research articles reviews method articles clinical trial papers and perspectives Contributions discussing advancements in brain pattern detection and segmentation techniques their transformative impact across diverse research fields and potential challenges are particularly encouraged Under the overarching umbrella of neuroscience we seek interdisciplinary collaborations to present an innovative snapshot of neuro detection s ongoing progress and its repercussions on neuroscience research
