Translational Medicine in CNS Drug Development George G. Nomikos,Douglas E. Feltner,2019-06-18 Translational Medicine in CNS Drug Development Volume 29 is the first book of its kind to offer a comprehensive overview of the latest developments in translational medicine and biomarker techniques With extensive coverage on all aspects of biomarkers and personalized medicine and numerous chapters devoted to the best strategies for developing drugs that target specific disorders this book presents an essential reference for researchers in neuroscience and pharmacology who need the most up to date techniques for the successful development of drugs to treat central nervous system disorders Despite increases in the number of individuals suffering from CNS related disorders the development and approval of drugs for their treatment have been hampered by inefficiencies in advancing compounds from preclinical discovery to the clinic However in the past decades game changing strides have been made in our understanding of the pathophysiology of CNS disorders and the relationship of drug exposure in plasma and CNS to pharmacodynamic measures in both animals and humans Includes comprehensive coverage of biomarker tools and the role of personalized medicine in CNS drug development Discusses strategies for drug development for a full range of CNS indications with particular attention to neuropsychiatric and neurocognitive disorders Includes chapters written by international experts from industry and academia

Translating Molecules into Medicines Shobha N. Bhattachar,John S. Morrison,Daniel R. Mudra,David M. Bender,2017-04-21 Tackling translational medicine with a focus on the drug discovery development interface this book integrates approaches and tactics from multiple disciplines rather than just the pharmaceutical aspect of the field The

authors of each chapter address the paradox between the molecular understanding of diseases drug discovery and drug development Laying out the detailed trends from various fields different chapters are dedicated to target engagement toxicological safety assessments and the compelling relationship of optimizing early clinical studies with design strategies The book also highlights the importance of balancing the three pillars sufficient efficacy acceptable safety and appropriate pharmacokinetics all of which are crucial to successful efforts in discovery and development With discussions regarding the combined approaches of molecular research personalized medicine pre clinical and clinical development as well as targeted therapies this compendium is a flexible fit perfect for professionals in the pharmaceutical industry and related academic fields
