Transport Revolutions Moving People And Freight Without Oil:

Transport Revolutions Richard Gilbert, Anthony Perl, 2010-05-01 Modern societies now rely almost entirely on oil for moving people and freight. The impacts on transport of scarcer and more expensive oil pose major challenges to humanity. They require revolutions in our thinking about mobility and consequent changes in all forms of transport. Transport Revolutions analyses five episodes of rapid and radical change in the way people and goods have travelled. It examines the worldwide state of transport today especially its energy use and its impacts positive and negative. The authors then show focusing on the United States and China how ample movement of people and freight could be sustained beyond 2025 with much reduced dependence on oil. Preparations for the end of cheap oil include Substantial use of electricity to power land transport. Use of wind to help power water transport. Reduced movement of people and goods by air. New approaches to transport planning finance and management. Written for transport professionals planners policymakers managers and investors. Transport Revolutions will appeal to all who need to keep ahead of mobility changes. **Transport Revolutions** Richard Gilbert, Anthony Pearl, 2012-05-16 Transport Revolutions Moving People and Freight without Oil sets out the challenges to our growing dependence on transport fuelled by low priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. Transport Revolutions synthesizes engineering economics environment organization policy and technology and draws extensively on current data to present important conclusions. The authors argue that land transport in the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid as trains and trolley buses are powered today rather than from on board fuel. They go on to discuss marine transport whose future is less clear and aviation which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport Transport Revolutions is essential reading for professionals and students in transport energy town planning and public policy. **An Introduction to Sustainable Transportation** Preston L. Schiller, Eric Christian Bruun, Jeffrey R. Kenworthy, 2010 Transportation plays a substantial role in the modern world it provides tremendous benefits to society but it also imposes significant economic social and environmental costs. Sustainable transport planning requires integrating environmental social and economic factors in order to develop optimal solutions to our many pressing issues especially carbon emissions and climate change. This essential multi authored work reflects a new sustainable transportation planning paradigm. It explores the concepts of sustainable development and sustainable transportation describes practical techniques for comprehensive evaluation provides tools for multi modal transport planning and presents innovative mobility management solutions to transportation problems. This text reflects a fundamental change in transportation decision making.

It focuses on accessibility rather than mobility emphasizes the need to expand the range of options and impacts considered in analysis and provides practical tools to allow planners policy makers and the general public to determine the best solution to the transportation problems facing a community Featuring extensive international examples and case studies textboxes graphics recommended reading and end of chapter questions the authors draw on considerable teaching and researching experience to present an essential ground breaking and authoritative text on sustainable transport Students of various disciplines planners policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability

Power from the People Greg Pahl, 2012-08-13 Over 90 percent of US power generation comes from large centralized highly polluting nonrenewable sources of energy It is delivered through long brittle transmission lines and then is squandered through inefficiency and waste But it doesn't have to be that way Communities can indeed produce their own local renewable energy *Power from the People* explores how homeowners co ops nonprofit institutions governments and businesses are putting power in the hands of local communities through distributed energy programs and energy efficiency measures Using examples from around the nation and occasionally from around the world Greg Pahl explains how to plan organize finance and launch community scale energy projects that harvest energy from sun wind water and earth He also explains why community power is a necessary step on the path to energy security and community resilience particularly as we face peak oil cope with climate change and address the need to transition to a more sustainable future This book the second in the Chelsea Green Publishing Company and Post Carbon Institute's Community Resilience Series also profiles numerous communitywide initiatives that can be replicated elsewhere

Filmonomics André de Palma, Luc Leruth, 2025-04-08 What could movies as diverse as *The Last Samurai* *Cl o* from 5 to 7 or *Dr Strangelove* have in common *Filmonomics* has a simple yet intriguing answer economics as the main driving force of the plot or as the main motivation of the characters actions This book analyses how movie makers use economic and financial motives in their plots or to build their characters Have they done it in line with economic theory Or are they proposing a new angle a new perspective that economists should take note of The authors here do not discuss wages in the film industry or the economics of movies What interests them is the economic motivations underpinning the behaviour of fictional characters in their favourite films They argue that credible movie characters can behave in irrational ways and movie makers occasionally introduce new ideas that economists should take note of A unique contribution this book will be of interest to readers eager to discover what economists have to say about films and film directors It will be indispensable for students and researchers of economics media studies film studies and cultural studies

Farming and the Fate of Wild Nature Daniel Imhoff, Jo Ann Baumgartner, 2012-07-16 *Farming and the Fate of Wild Nature* addresses an urgent and complex issue facing communities and cultures throughout the world the need for heightened land stewardship and conservation in an era of diminishing

natural resources Agricultural lands in rural areas are being purchased for development Water scarcities are pitting urban and development expansion against agriculture and conservation needs The farming population is ageing and retiring while those who remain struggle against low commodity prices international competition rising production costs and the threat of disappearing subsidies We are living amidst a major extinction crisis much of it driven by agriculture as well as an increasing shift toward a global urban populace The modern diet driven by a grain fed livestock industry is no longer connected with the ecosystems that support it In international circles experts are arguing that further intensification of agriculture through industrialization and genetic modification will be necessary to both feed an exploding human population and to save what is left of wild biodiversity This book takes up where its predecessor the award winning *Farming with the Wild* left off Featuring a wide range of in depth essays articles and other materials by such authors as Aldo Leopold Wendell Berry Michael Pollan Fred Kirschenmann and Daniel Imhoff this book persuasively demonstrates that farm and ranch operations which coexist with wild nature are necessary to sustain biodiversity and beauty on the landscape In fact as this invaluable educational resource demonstrates they are essential in the challenge of building sane healthy and hopeful human societies

Publisher s website *A Smarter, Greener Grid* Kevin B.
