ASP.NET 2.0: A Developer's Notebook Wei-Meng Lee, 2005-06-07 When ASP.NET hit the street a couple of years ago it was a real eye opener Microsoft's tool for creating dynamic server side web applications introduced Web Forms a feature with the same rapid drag and drop convenience enjoyed by Visual Basic developers along with a method for creating XML based web services ASP.NET was more than an upgrade of Active Server Pages it was a quantum leap ahead Now Microsoft has a new version of ASP.NET as part of its upcoming next generation release of the Visual Studio .NET development platform ASP.NET 2.0 is already available in beta release and web developers are anxious to get a good look at it That's exactly what our new Developer's Notebook allows you to do More than just an introduction to ASP.NET 2.0 this practical guide acquaints you with all of the new features through nearly 50 hands on projects Each one places emphasis on changes in the new release that can increase productivity simplify programming tasks and help you add functionality to your applications For example ASP.NET 2.0 includes master pages themes and skins so you can build applications with a consistent page layout and design Other changes allow for the automatic creation of web pages for use on mobile devices while wizards and controls allow you to perform frequent tasks like data access without having to write a single line of code ASP.NET 2.0 A Developer's Notebook also includes suggestions

for further experimentation links to on line documentation and practical notes and warnings from the author regarding changes to the new version The new Developer s Notebooks series from O Reilly offers an in depth first look at important new tools for software developers Emphasizing example over explanation and practice over theory they focus on learning by doing you ll get the goods straight from the masters in an informal and code intensive style If you want to get up to speed on ASP NET 2 0 before its official release this all lab no lecture book will get you there Autonomous Agricultural Vehicles Ali Roshanianfard,Sina Faizollahzadeh Ardabili,2023-07-19 This comprehensive guide to agricultural robots is the ideal companion for any student or professional engineer looking to understand and develop autonomous vehicles to use on the modern farm With world hunger one of the modern era s most pressing issues autonomous agricultural vehicles are a key tool in tackling this problem Smart farming can increase total factory productivity through designing autonomous vehicles based on specific needs in addition to implementing smart systems into day to day operations This book provides step by step guidance from the theory behind autonomous vehicles through to the design process and manufacture Detailing all components of an autonomous agricultural vehicle from sensors controlling algorithms communication and controlling units the book covers topics such as artificial intelligence and machine learning It also includes case studies and a detailed guide to international policymaking in recent years Suitable for students and professionals alike this book will be a key companion to those interested in agricultural engineering autonomous vehicles robotics and mechatronics in mechanical automotive and electrical engineering *Data Science for Transport* Charles Fox,2018-02-27 The quantity diversity and availability of transport data is increasing rapidly requiring new skills in the management and interrogation of data and databases Recent years have seen a new wave of big data Data Science and smart cities changing the world with the Harvard Business Review describing Data Science as the sexiest job of the 21st century Transportation professionals and researchers need to be able to use data and databases in order to establish quantitative empirical facts and to validate and challenge their mathematical models whose axioms have traditionally often been assumed rather than rigorously tested against data This book takes a highly practical approach to learning about Data Science tools and their application to investigating transport issues The focus is principally on practical professional work with real data and tools including business and ethical issues Transport modeling practice was developed in a data poor world and many of our current techniques and skills are building on that sparsity In a new data rich world the required tools are different and the ethical questions around data and privacy are definitely different I am not sure whether current professionals have these skills and I am certainly not convinced that our current transport modeling tools will survive in a data rich environment This is an exciting time to be a data scientist in the transport field We are trying to get to grips with the opportunities that big data sources offer but at the same time such data skills need to be fused with an understanding of transport and of transport modeling Those with these combined skills can be instrumental at providing better faster cheaper data for transport decision making and ultimately contribute to innovative

efficient data driven modeling techniques of the future It is not surprising that this course this book has been authored by the Institute for Transport Studies To do this well you need a blend of academic rigor and practical pragmatism There are few educational or research establishments better equipped to do that than ITS Leeds Tom van Vuren Divisional Director Mott MacDonald WSP is proud to be a thought leader in the world of transport modelling planning and economics and has a wide range of opportunities for people with skills in these areas The evidence base and forecasts we deliver to effectively implement strategies and schemes are ever more data and technology focused a trend we have helped shape since the 1970 s but with particular disruption and opportunity in recent years As a result of these trends and to suitably skill the next generation of transport modellers we asked the world leading Institute for Transport Studies to boost skills in these areas and they have responded with a new MSc programme which you too can now study via this book Leighton Cardwell Technical Director WSP From processing and analysing large datasets to automation of modelling tasks sometimes requiring different software packages to talk to each other to data visualization SYSTRA employs a range of techniques and tools to provide our clients with deeper insights and effective solutions This book does an excellent job in giving you the skills to manage interrogate and analyse databases and develop powerful presentations Another important publication from ITS Leeds Fitsum Teklu Associate Director Modelling Appraisal SYSTRA Ltd Urban planning has relied for decades on statistical and computational practices that have little to do with mainstream data science Information is still often used as evidence on the impact of new infrastructure even when it hardly contains any valid evidence This book is an extremely welcome effort to provide young professionals with the skills needed to analyse how cities and transport networks actually work The book is also highly relevant to anyone who will later want to build digital solutions to optimise urban travel based on emerging data sources Yaron Hollander author of Transport Modelling for a Complete Beginner
