whether traversed in a car or train scanned from far above or as the locus of our food supply or leisure The Rural Landscape provides a deceptively simple method for approaching the often complex and variegated shape of the land Hart divides it into its mineral vegetable and animal components and shows how each are interdependent using examples from across Europe and America Looking at the land forms of southern England for instance he comments on the use of hedgerows to divide fields the mineral or geomorphological features of the land determining where hedgerows will grow in service of the human animal s needs Hart reveals the impact on the land of human culture and the basic imperative of making a living as well as the evolution of technical skills toward that end as seen in the advance of barbed wire as a function of modern transportation Hart describes with equal clarity the erosion of land to form river basins and the workings of a coal mine He charts shifting patterns of crop rotation from the medieval rota of food wheat or rye feed barley or oats and fallow to restore the land to modern two crop cycle of corn and soybeans made possible by fertilizers and pesticides He comments on traditions of land division it is almost impossible to find a straight line on a map of Europe and inventories a variety of farm structures from hop yards and oast houses to the use of dikes for irrigation He identifies the relict features of the landscape from low earthen terraces once used in the southern United States to prevent erosion to old bank buildings that have become taverns and barns turned into human homes Carrying the story of the rural landscape into our frantic era he describes the bow wavewhere city life meets rural agriculture and plots the effect of recreation and its structures on the look of the land
