

TOBY DVR5 OIL CONTROL & SAFETY VALVE

TECHNICAL HANDBOOK

Principle of Operation

The Toby DVR5 Oil Control Valve is a multi function unit for maintaining a constant oil level, regulating the oil flow and providing a safety shut off for oil heating appliances. The fuel enters via the filter and the inlet valve into the oil control body. The rising oil level in the oil control lifts the float and when the oil has reached the 'oil level' mark, the inlet valve is closed. Should the inlet valve 'let by' the oil level in the control continues to rise until the safety level is reached at which point the safety shut off system is triggered and the inlet valve is forcibly closed. To reset the valve the reset lever (R – see page 5) must be **lifted**. With the DVR5 control the oil flow must be adjusted manually by turning the control knob clockwise to reduce the rate and anticlockwise to increase the rate. Turn to the 'O' position for turning the oil supply OFF.

DVR OIL CONTROL- Normal Annual Servicing

The Toby DVR5 Oil Control valve requires annual servicing. Additional cleaning may prove necessary if the valve has been used with unclean fuel.

The following sequence should be carried out during the annual service;

- 1) Tap the actuating lever, with the control knob set at the highest position. In this way, any slight accumulation of dirt is and around the metering stem slot will be displaced. (See picture 1)
- 2) Remove any carbon deposit (cracked oil) from the burner feed pipe to ensure unobstructed oil flow from the valve to the burner. (Always refer to appliance manufacturers instructions)
- 3) Remove and clean or replace the filter (see pictures 2 & 3)
- 4) Remove the draining screw (see picture 4) and rinse the valve through with clean fuel oil until clear oil emerges at the point of drainage.
- 5) If water is found inside the oil control, it is advisable to also clean the oil supply pipe between the oil control and the burner.
