Plant signaling: Understanding the molecular crosstalk Khalid Rehman Hakeem, Reiaz Ul Rehman, Inayatullah Tahir, 2013-10-25. Plant signalling has emerged as an integrated field which has become indispensable in recent times to study any biological process. Over the last decade, an enormous amount of information has been generated in this field, and the advances in information technology gave birth to bioinformatics, which has helped greatly in managing the galaxy of information. It is now possible to view the different information sources in a systems biology approach, which has unravelled the association of new processes and thus helped us enormously in understanding of the biological processes. The present book is an attempt at understanding the plant signalling processes with different perspectives. Even though the plants are sessile, but there exists a tremendous interconnected network of perception at morphological, physiological and molecular levels. The impact of the surrounding environment in terms of abiotic and biotic stresses is significant in terms of its survival, adaptation and productivity for the human welfare. The plants possess a wide array of processes at the organ, tissue and cellular levels, which are governed by a plethora of molecules. The molecules govern individual processes, and there exists a cross talk between them to form a complex network of processes. The book tries to envision how different processes are operating at different points in the life cycle of the plant.

Microbial Endophytes and Plant Growth Manoj Kumar Solanki, Mukesh Kumar Yadav, Bhim Pratap Singh, Vijai Kumar Gupta, 2022-11-19. Microbial Endophytes and Plant Growth: Beneficial Interactions and Applications explains how modern molecular tools can unlock the plant's microbial network, building the bridge between plant and environment. Chapters describe the usefulness of the endophytic microbiome of different crops, including cereals, vegetables and horticulture, and delve into the latest research surrounding the applications of plant-microbe interactions in improving plant growth. Other

topics discussed include root endophytes and their role in plant fitness seed associated endophytes and their functions and microbial endophytes and nanotechnology This is a one stop resource for scientists wanting access to the latest research in plant microbiology The book also provides advanced techniques for using multi omics approaches to study plant microbe interactions providing readers with a practical approach Outlines multi omics approaches to study plant endophytes interactions Describes the efficacy of endophytes to combat biotic and abiotic factors Defines the prominent role of endophytic microbes to improve plant growth *Brassinosteroids* Shamsul Hayat,Aqil Ahmad,2013-06-29 The entire range of the developmental processes in plants is regulated by the shift in the hormonal concentration tissue sensitivity and their interaction with the factors operating around the plants Out of the recognized hormones attention has largely been focused on five Auxins Gibberellins Cytokinin Absciscic acid and Ethylene However in this book the information about the most recent group of phytohormones Brassinosteroids has been compiled by us It is a class of over 40 polyhydroxylated sterol derivatives ubiquitously distributed throughout the plant kingdom A large portion of these steroids is restricted to the reproductive organs pollens and immature seeds Moreover their strong growth inducing capacity recognized as early as prior to their identification in 1979 tempted the scientists to visualize the practical importance of this group of phytohormones The brassin solution from rape pollen was used in a collaborative project by the scientists of Brazil and U S A in a p sowing seed treatment to augment the yield This was followed by large scale scientific programmes in U S Japan China Germany and erstwhile U S S R after the isolation of the brassinosteroids This approach suits best in today s context where plants are targeted only as producers and hormones are employed to get desired results Chapter 1 of this book which embodies a total of 10 chapters gives a comprehensive survey of the hitherto known brassinosteroids isolated from lower and higher plants

Biostimulants in Plant Protection and Performance Azamal Husen,2024-03-16 Biostimulants a diverse class of compounds including substances or microorganisms are helpful in sustainable plants growth and development They accelerate plant growth yield and chemical composition even under unfavorable conditions The main biostimulants are nitrogen containing compounds humic materials some specific compounds released by microbes plants and animals various seaweed extracts bio based nanomaterials phosphite silicon and so on Additionally new generation products and bioproducts are being developed for sustainable plant growth and protection Some research works in the area of biotechnology and nanobiotechnology have shown improved sustainable plant growth and production The protective roles of biostimulants are varied depends on the compound and plant species Exposure of biostimulants have shown accelerated plants growth and developmental processes for instance manage stomatal conductance and rate of transpiration and increase rate of photosynthesis etc They also increased crop plants immune systems against the adverse situation Thus use of innovations of new generation biostimulants also enhance plant production systems through a significant reduction of synthetic chemicals such as pesticides and fertilizers Moreover bioinoculants commercial products obtained from seaweed extract humic acids amino acids fulvic acids

and some microbial inoculants have shown their potential role in adventitious root induction in plants. Microbial inoculants or microbial based biostimulants as a promising and eco friendly technology can be widely used to address environmental concerns and fulfill the need for developing sustainable or modern agriculture practices. They have great potential to elicit plant tolerance to various climate change related stresses and thus enhance plant growth and overall performance related features. However for successful implementation biostimulants based agriculture in the field under changing climate conditions an understanding of plant functions and biostimulants interaction or action mechanisms coping with various abiotic as well as biotic stresses at the physicochemical, metabolic and molecular levels is required. Mycorrhizae are beneficial fungi that form symbiotic associations with plants and aid in plant development, disease resistance and soil health is well established. Similarly phyllospheric microbiome are known to possess different plant growth promotion attributes like nitrogen fixation, phosphate solubilization, biocontrol activity and increase plant resistance towards abiotic stresses. The plant growth promotion traits possessed by these phyllospheric microbiota can be judiciously harbored for phyllospheric and rhizospheric engineering. The engineered phyllospheric and rhizospheric microbiome can increase the plant growth and productivity thereby can act as a driving force for increasing the agricultural production in a sustainable manner. Taken together this book aims to contribute to the recent understanding associated with the various role and application of biostimulants on different plant for their sustainable growth and management. Discusses our current understanding of and advances in biostimulants along with their application in plants growth performance and overall management. Explores new techniques, new generation products and bioproducts. Highlights the role of seaweed extract, humic acids, protein hydrolysates, amino acids, melatonin, paramylon, fulvic acids, microbial inoculants, phyllospheric and rhizospheric and more.
