Methods just as diseases or scientists have their own history It is important for scientists to be aware of the genesis of the methods they use and of the context in which they were developed A History of Epidemiologic Methods and Concepts is based on a collection of contributions which appeared in SPM International Journal of Public Health starting in January 2001 The contributions focus on the historical emergence of current epidemiological methods and their relative importance at different points in time rather than on specific achievements of epidemiology in controlling plagues such as cholera tuberculosis malaria typhoid fever or lung cancer The papers present the design of prospective and retrospective studies and the concepts of bias confounding and interaction The compilation of articles is complemented by an introduction and comments by Prof Alfredo Morabia which puts them in the context of current epidemiological research *Opera omnia* Cornelis Winkler,1918 **Levensverzekering-geneeskunde** Willem Nolen,1916 **Tijdschrift voor vergelijkende geneeskunde** ,1915 **Mededeelingen van den Dienst der volksgezondheid in Nederlandsche-Indië** Dutch East Indies. How liberal democracies in the late twentieth century have sought to resolve public concerns over charged issues in medicine and science Ethics boards have become obligatory passage points in today s medical science and we forget how novel they really are The use of humans in experiments is an age old practice that records show goes back to at least the third century BC and it has been popular as a practice since the early modern period Yet in most countries around the world hardly any formal checks and balances existed to govern the communal oversight of experiments involving human subjects until at least the 1960s Ethics by Committee traces the rise of ethics boards for human experimentation in the second half of the twentieth century Using the Netherlands as a case study historian Noortje Jacobs shows how the authority of physicians to make decisions about clinical research in this period gave way in most developed nations to formal mechanisms of communal decision making that served to regiment the behavior of individual researchers This historically unprecedented change in scientific governance came out of the growing international wariness of medical research in the decades after World War II and was meant to solidify a new way of reasoning together in liberal democracies about medicine and science But what

reasoning together meant and who was invited to participate changed drastically over time In detailing this history Jacobs shows that research ethics committees were originally intended not only to make human experimentation more ethical but also to raise its epistemic quality and intensify the use of new clinical research methods By examining complex negotiations over the appropriate governance of human subjects research Ethics by Committee is an important contribution to our understanding of the randomized controlled trial and the history of research ethics and bioethics more generally
