Triple Challenge Europe Development Governance:

The Triple Challenge for Europe Jan Fagerberg, Staffan Laestadius, Ben R. Martin, 2015-10-15 Europe is confronted by an intimidating triple challenge economic stagnation climate change and a governance crisis This book demonstrates how these three challenges are closely inter related A return to economic growth cannot come at the expense of greater risk of irreversible climate change Instead what is required is a reconceptualization of what is intended by economic development and a fundamental transformation of the economy to a new green trajectory based on rapidly diminishing emission of greenhouse gases This entails a much greater emphasis on innovation in all its forms not just technological Innovation policy must be placed at the very heart of industrial policy and indeed of economic policy more broadly Other parts of the world are also facing varying forms of the triple challenge and while the governance challenge may not be exactly the same as for Europe and the EU Europe is uniquely placed to take the lead in addressing the triple challenge While this may well entail certain costs in the short term it will undoubtedly bring considerable benefits in the longer term It should also encourage countries in other parts of the world to follow Europe's lead in this transformation process thereby ensuring that climate change is kept within manageable bounds Addressing the triple challenge would thus provide Europe and its citizens with a new sense of purpose revitalizing the EU and the European project over the decades to come

The Triple Challenge for Europe, 2016 **Innovation, Economic Development and Policy** Jan Fagerberg, 2018-04-27 This authoritative and enlightening book focuses on fundamental questions such as what is innovation who is it relevant for what are the effects and what is the role of innovation policy in supporting innovation diffusion The first two sections present a comprehensive overview of our current knowledge on the phenomenon and analyse how this knowledge and the scholarly community underpinning it has evolved towards its present state The third part explores the role of innovation for growth and development while section four is concerned with the national innovation system and the role of innovation policy in influencing its dynamics and responding to the important challenges facing contemporary societies

Innovation Systems, Policy and Management Jorge Niosi, 2018-08-02 Describes how institutions and markets can best be structured in order to promote innovation in key economic sectors

Foundations of Economic Change Andreas Pyka, Uwe Cantner, 2017-11-15 The book illustrates the considerable advances in modern evolutionary economics and addresses core questions of economic behaviour interaction of heterogeneous actors in uncertain environments and the possibility of aggregating observations on a macro economic level It presents the foundations of economic change as the major building blocks of an economic approach that focusses on complex processes driven by endogenous innovation as well as crisis The theoretical considerations are complemented by econometric studies to demonstrate the relevance of evolutionary economic thinking to improve our understanding of the most challenging issues related to economic growth and development

Globalisation, New and Emerging Technologies, and Sustainable Development Jesper Lindgaard

Christensen,Birgitte Gregersen,Jacob Rubæk Holm,Edward Lorenz,2021-05-03 This book explores the capacity of the Danish innovation system to respond to key societal challenges including the green imperative of achieving growth with environmental sustainability and the need to adapt to new and possibly disruptive changes in technology often referred to as the Fourth Industrial Revolution The book is divided into four main parts The first describes the evolving characteristics of the Danish system of research and innovation with special attention to the role of policy at the national and regional levels The second part focuses on interorganisational relations including the position of Danish firms in national and global value chains The third part examines changes in labour markets and in the educational and training system and it considers the impact of new technologies including robotics and artificial intelligence on employment and skills The fourth part turns to issues of climate change and environmental sustainability including an assessment of the Danish economy's success in meeting the challenges of the UN Sustainable Development Goals The book will be of particular interest to small countries of which the Danish innovation system is representative but it also appeals more broadly to an audience interested in innovation systems and policies to support economic development

Challenges of European External Energy Governance with Emerging Powers Michèle Knodt,Nadine Piefer,2016-03-03 In a multipolar world with growing demand for energy not least by Emerging Powers such as Brazil India China or South Africa BICS questions of EU external energy governance would at first hand appear to be a high priority Yet reality tells a different story the EU's geographical focus remains on adjacent countries in the European neighbourhood and on issues related to energy security Despite being Strategic Partners and engaging in energy dialogues it seems that the EU is lacking strategic vision and is not perceived as a major actor in energy cooperation with the BICS Thus political momentum for energy cooperation and joint governance of scarce resources is vanishing Resulting from three years of international interdisciplinary research cooperation among academics and practitioners in Europe and the BICS countries within a project funded by the Volkswagen Foundation this volume addresses one of the greatest global challenges Specific focus lies on the bilateral energy dialogues and Strategic Partnerships between the EU and Emerging Powers regarding bilateral inter and transnational energy cooperation Furthermore the analysis provides policy recommendations in order to tap the full potential of energy cooperation between the EU and Brazil India China and South Africa

Bioeconomy for Beginners Joachim Pietzsch, 2020-03-06 This book provides an interdisciplinary and comprehensible introduction to bioeconomy It thus provides basic knowledge for understanding a transformation process that will shape the 21st century and requires the integration of many disciplines and industries that have had little to do with each other up to now We are talking about the gradual and necessary transition from the age of fossil fuels which began around 200 years ago to a global economy based on renewable raw materials and renewable energies The success of this transition is key to coping with the challenge of climate change This book conceives the realization of bioeconomy as a threefold task a scientific an economic and an ecological one Where does the biomass come from that we need primarily for feeding the growing world population but also for future energy and material use How can it be processed in biorefineries and what role does biotechnology play in this regard Which aspects of innovation economics need to be considered which economic aspects of value creation competitiveness and customer acceptance are important What conditions must a bioeconomy fulfil in order to enable a sustainable development of life on earth May it be regarded as a key to further economic growth or shouldn t it rather orient itself towards the ideal of sufficiency By dealing with these questions from the not necessarily consistent perspectives of proven experts this book provides an interdisciplinary overview of a dynamic field of research and practice that raises more questions than answers and thus may nurture the motivation of many more people to seriously engage for the realization of a bioeconomy
