Unifying Political Methodology Unifying Political Methodology:

Unifying Political Methodology Gary King, 1989 In this book the author demonstrates the utility of the likelihood theory of statistical inference as a basic unifying approach to statistical modelling for political research This approach encourages the tailoring of models to particular phenomena studied

Unifying Political Methodology Gary King, 1998-06-24 Argues that likelihood theory is a unifying approach to statistical modeling in political science Unifying Political Methodology Gary King, 1989

Rediscoveries and Reformulations Hayward R. Alker, 1996-05-30 This book provides a distinctive and rich conception of methodology within international studies From a rereading of the works of leading Western thinkers about international studies Hayward Alker rediscovers a neo Classical conception of international relations which is both humanistic and scientific He draws on the work of classical authors such as Aristotle and Thucydides modern writers like Machiavelli Vico Marx Weber Deutsch and Bull and post modern writers like Havel Connolly and Toulmin The central challenge addressed is how to integrate positivist or falsificationist research styles within humanistic or interpretive ones The author argues that appropriate philosophically informed reformulations of conventional statistical and game theoretic analyses are possible and describes a number of humanistic methodologies for international relations including argumentation analysis narrative modeling computational models of political understanding and reconstructive analysis

A Mathematics Course for Political and Social Research Will H. Moore, David A. Siegel, 2013-08-11 Political science and sociology increasingly rely on mathematical modeling and sophisticated data analysis and many graduate programs in these fields now require students to take a math camp or a semester long or yearlong course to acquire the necessary skills Available textbooks are written for mathematics or economics majors and fail to convey to students of political science and sociology the reasons for learning often abstract mathematical concepts A Mathematics Course for Political and Social Research fills this gap providing both a primer for math novices in the social sciences and a handy reference for seasoned researchers The book begins with the fundamental building blocks of mathematics and basic algebra then goes on to cover essential subjects such as calculus in one and more than one variable including optimization constrained optimization and implicit functions linear algebra including Markov chains and eigenvectors and probability It describes the intermediate steps most other textbooks leave out features numerous exercises throughout and grounds all concepts by illustrating their use and importance in political science and sociology Uniquely designed and ideal for students and researchers in political science and sociology Uses practical examples from political science and sociology Features Why Do I Care sections that explain why concepts are useful Includes numerous exercises Complete online solutions manual available only to professors email david.siegel@duke.edu subject line Solution Set Selected solutions available online to students

Comparative Politics B. Guy Peters, 1998-10 This book examines the issues involved in the attempts to compare political systems and discusses how the methods and results of comparative politics can be improved

Case Study

Research John Gerring, 2006-12-11 Case Study Research Principles and Practices aims to provide a general understanding of the case study method as well as specific tools for its successful implementation These tools can be utilized in all fields where the case study method is prominent including business anthropology communications economics education medicine political science social work and sociology Topics include the definition of a case study the strengths and weaknesses of this distinctive method strategies for choosing cases an experimental template for understanding research design and the role of singular observations in case study research It is argued that a diversity of approaches experimental observational qualitative quantitative ethnographic may be successfully integrated into case study research This book breaks down traditional boundaries between qualitative and quantitative experimental and nonexperimental positivist and interpretivist

A Solution to the Ecological Inference Problem Gary King, 2013-09-20 This book provides a solution to the ecological inference problem which has plagued users of statistical methods for over seventy five years How can researchers reliably infer individual level behavior from aggregate ecological data In political science this question arises when individual level surveys are unavailable for instance local or comparative electoral politics unreliable racial politics insufficient political geography or infeasible political history This ecological inference problem also confronts researchers in numerous areas of major significance in public policy and other academic disciplines ranging from epidemiology and marketing to sociology and quantitative history Although many have attempted to make such cross level inferences scholars agree that all existing methods yield very inaccurate conclusions about the world In this volume Gary King lays out a unique and reliable solution to this venerable problem King begins with a qualitative overview readable even by those without a statistical background He then unifies the apparently diverse findings in the methodological literature so that only one aggregation problem remains to be solved He then presents his solution as well as empirical evaluations of the solution that include over 16 000 comparisons of his estimates from real aggregate data to the known individual level answer The method works in practice King s solution to the ecological inference problem will enable empirical researchers to investigate substantive questions that have heretofore proved unanswerable and move forward fields of inquiry in which progress has been stifled by this problem

Issues and Methods in Comparative Politics Todd Landman, 2003 Explores the importance of comparative politics discusses different comparative methods investigates the big issues of today and looks forward to the key challenges for comparative politics over the next century A New Handbook of Political Science Robert E. Goodin, Hans-Dieter Klingemann, 1998 Aimed at political scientists A New Handbook of Political Science provides the definitive survey of new developments over the last 20 years assessed in the context of historical trends in the field Theory and Methods in Political Science Vivien Lowndes, David Marsh, Gerry Stoker, 2017-09-28 A broad ranging and pluralistic textbook which highlights the rich variety of approaches to studying politics Written by an international team of experts this fully revised fourth edition offers cutting edge coverage from fundamental to contemporary issues Integrating guides to further reading

and clear examples of how research methods can be applied it enables readers to feel confident about taking their study of politics forward An ideal foundation for study and research in political science this textbook will be essential to students at any stage of their degree It serves as core reading on undergraduate and postgraduate political analysis theory and methods courses In demonstrating how independent research is undertaken in political science the book allows students and early career researchers to begin thinking about formulating their own research agendas This new edition Leads the way with fresh new ideas and perspectives with the help of new co editor Vivien Lowndes Includes new chapters on post structuralism as a theoretical approach and on big data as a methodological resource Offers an international perspective on political science with discussion of global as well as domestic politics and a range of international cases and examples Why the Humanities Matter Today Lee Trepanier,2017-03-08 The humanities in American higher education is in a state of crisis with declining student enrollment fewer faculty positions and diminishing public prestige Instead of recycling old arguments that have lost their appeal the humanities must discover and articulate new rationales for their value to students faculty administrators and the public *Why the Humanities Matter Today In Defense of Liberal Education* is an attempt to do so by having philosophers literature and foreign language professors historians and political theorists defend the value and explain the worth of their respective disciplines as well as illuminate the importance of liberal education By setting forth new arguments about the significance of their disciplines these scholars show how the humanities can reclaim its place of prominence in American higher education *Making Social Sciences More Scientific* Rein Taagepera,2008-07-24 In his challenging new book Rein Taagepera argues that society needs more from social sciences than they have delivered One reason for falling short is that social sciences have depended excessively on regression and other statistical approaches neglecting logical model building Science is not only about the empirical What is but also very much about the conceptual How should it be on logical grounds Statistical approaches are essentially descriptive while quantitatively formulated logical models are predictive in an explanatory way *Why Social Sciences Are Not Scientific Enough* contrasts the predominance of statistics in today s social sciences and predominance of quantitatively predictive logical models in physics It shows how to construct predictive models and gives social science examples *Why Social Sciences Are Not Scientific Enough* is useful to students who wish to learn the basics of the scientific method and to all those researchers who look for ways to do better social science **Political Complexity** Diana Richards Doyle,2000-05-22 DIVDemonstrates how non linear models help us understand political phenomena div *Ecological Inference* Gary King,Martin A. Tanner,Ori Rosen,2004-09-13 Drawing upon the recent explosion of research in the field a diverse group of scholars surveys the latest strategies for solving ecological inference problems the process of trying to infer individual behavior from aggregate data The uncertainties and information lost in aggregation make ecological inference one of the most difficult areas of statistical inference but these inferences are required in many academic fields as well as by legislatures and the Courts in redistricting marketing research

by business and policy analysis by governments This wide ranging collection of essays offers many fresh and important contributions to the study of ecological inference **Repression and Accommodation in Post-Revolutionary States** M. Krain,2000-07-06 We know very little about political dynamics in states that have just experienced an internal war despite the increasing need to deal with such states in the post Cold War world Matthew Krain examines what prompts leaders in post revolutionary states to employ repression or accommodation Through statistical analysis and case studies of Iran Cuba Nicaragua and Bolivia he also examines the effects of these choices on how the domestic opposition reacts what type of political system develops in the new state and whether or not the leaders who institute these policies survive in power in the long run Krain concludes with a series of policy recommendations The Politics of Judicial Review Christian

Adam,2016-04-20 This book unites scholarship on law and politics with compliance research in the EU to shed light on the political role of a neglected dimension of litigation in the EU the political role of governmental actions for annulment The book does not portray national governments as passive actors within the EU s judicial arena Instead it focuses on cases in which national governments turn to the Court of Justice to litigate against the European Commission and provides several answers to the question of why EU member state governments take this decision Governments hope on the one hand to evade costly domestic adjustments where the Commission uses administrative acts to interfere with domestic policy application On the other hand governments hope to provoke judicial law making to influence the long term development of EU administrative law and sectoral regulation The book will be of particular interest to political scientists and legal scholars

Towards Consensus? Peter Aimer,2013-11-01 Based on a nationwide survey of voters this is a study of the historic 1993 New Zealand general election and referendum It seeks to explain why New Zealanders made the choices they did an extremely narrow majority for the National Party and a decision to shift to MMP representation Integrated Inferences Macartan Humphreys,Alan M. Jacobs,2023-11-30 There is a growing consensus in the social sciences on the virtues of research strategies that combine quantitative with qualitative tools of inference Integrated Inferences develops a framework for using causal models and Bayesian updating for qualitative and mixed methods research By making updating and querying causal models researchers are able to integrate information from different data sources while connecting theory and empirics in a far more systematic and transparent manner than standard qualitative and quantitative approaches allow This book provides an introduction to fundamental principles of causal inference and Bayesian updating and shows how these tools can be used to implement and justify inferences using within case process tracing evidence correlational patterns across many cases or a mix of the two The authors also demonstrate how causal models can guide research design informing choices about which cases observations and mixes of methods will be most useful for addressing any given question

Party Ballots, Reform, and the Transformation of America's Electoral System Erik J. Engstrom,Samuel Kernell,2014-10-27 This book demonstrates that nineteenth century electoral politics were the product of institutions that

prescribed how votes were cast and were converted into political offices
