Virtual Geographies Virtual Geographies

Merrill L. Johnson

Virtual Geographies Virtual Geographies:

Virtual Geographies Mike Crang, Phil Crang, Jon May, 2013-04-15 This book examines the interrelationship between telecommunications and tourism in shaping the nature of space place and the urban at the end of the twentieth century They discuss how these agents are instrumental in the production of homogenous world spaces and how these in turn presuppose new kinds of political and cultural identity Virtual Geographies explores how new communication technologies are being used to produce new geographies and new types of space Leading contributors from a wide range of disciplines including geography sociology philosophy and literature investigate how visions of cyberspace have been constructed offer a critical assessment of the status of virtual environments and geographies explore how virtual environments reshape the way we think and write about the world This book sets recent technological developments in a historical and geographical perspective to offer a clearer view of the new vistas ahead

Virtual Reality in Geography Peter Fisher, David Unwin, 2001-11-22 Virtual Reality in Geography covers through the window VR systems fully immersive VR systems and hybrids of the two types The authors examine the Virtual Reality Modeling Language approach and explore its deficiencies when applied to real geographic environments This is a totally unique book covers all the major uses and methods of virtual reality used by geographers The authors have produced a CDROM that comes with the book of virtual reality images that will be a fascinating companion to the text This book will be of great interest to geographers computer scientists and all those interested in multimedia and computer graphics

Virtual Geographies Sabine Heuser, 2003 Virtual geographies is the first detailed study to offer a working definition of cyberpunk within the postmodern force field Cyberpunk emerges as a new generic cluster within science fiction one that has spawned many offspring in such domains as film music and feminism Its central features are its adherence to a version of virtual space and a deconstructivist punk attitude towards high culture modernity the human body and technology from computers to prosthetics The main proponents of cyberpunk are analyzed in depth along with the virtual landscapes they have created William Gibson's Cyberspace Pat Cadigan's Mindscapes and Neal Stephenson's Metaverse Virtual reality is examined closely in all its aspects from the characteristic narrative constructions employed to the esthetic implications of the virtual sublime and its postmodern potential as a discursive mode

Virtual Geographies Mike Crang, Phil Crang, Jon May, 2013-04-15 This book examines the interrelationship between telecommunications and tourism in shaping the nature of space place and the urban at the end of the twentieth century They discuss how these agents are instrumental in the production of homogenous world spaces and how these in turn presuppose new kinds of political and cultural identity Virtual Geographies explores how new communication technologies are being used to produce new geographies and new types of space Leading contributors from a wide range of disciplines including geography sociology philosophy and literature investigate how visions of cyberspace have been constructed offer a critical assessment of the status of virtual environments and geographies explore how virtual environments reshape the way we

think and write about the world This book sets recent technological developments in a historical and geographical perspective to offer a clearer view of the new vistas ahead

Virtual Geography McKenzie Wark, 1994-11-22 The author's capacity to grasp and interpret these world media events is astounding and her ability to provide insights into a world where unbounded information is circling the earth with the speed of light is startling Choice a wide ranging quirky and dextrous mix of description theory and analysis that documents the perils of the global telecommunications network Times Literary Supplement this is a stimulating even moving book dense with ideas and with many quotable lines The New Statesman Wark is one of the most original and interesting cultural critics writing today Lawrence Grossberg McKenzie Wark writes about the experience of everyday life under the impact of increasingly global media vectors We no longer have roots we have aeriels We no longer have origins we have terminals

Virtual Geographic Environments Hui Lin, Michael Batty, 2012 Virtual Geographic Environments edited by Hui Lin and Michael Batty collects key papers that define the current momentum in GIS and virtual geographies Contributions by leading members of the geospatial community to Virtual Geographic Environments illustrate the cutting edge of GIScience as well as new applications of GIS with the processing and delivery of geographic information through the Web and handheld devices forming two major directions to these developments The four part organization leads from a primer on VGEs to virtual cities and landscapes interface design and public participation and finally mobile and networked VGEs Current topics such as crowd sourcing and related services point to the development of new business models that merge proprietary and nonproprietary systems

Facets of Virtual Environments Fritz Lehmann-Grube, Jan Sablatnig, 2010-02-17 In recent years the popularity of virtual worlds has increased significantly and they have consequently come under closer academic scrutiny Papers about virtual worlds are typically published at conferences or in journals that specialize in something tirely different related to some secondary aspect of the research Thus a paper d cussing legal aspects of virtual worlds may be published in a law journal while a psychologist s analysis of situation awareness may appear at a psychology conference The downside of this is that if you publish a virtual worlds paper at an unrelated conference in this manner you are likely to be one of only a handful of attendees working in the area You will not therefore achieve the most important goal of tending conferences meeting and conversing with like minded colleagues from the academic community of your field of study Virtual worlds touch on many well established themes in other areas of science Researchers from all these fields will therefore be looking at this new interesting and growing field However to do effective research related to these complex constructs researchers need to take into account many of the other facets from other fields that impact virtual worlds Only by being familiar with and paying attention to all these different aspects can virtual worlds be properly understood

The Impact of Virtual Geographies Graeme Michael Dean, 2010 Success in spatial skills can be an indicator of success in mathematics and sciences Wayfinding the ability to purposefully navigate is one such important spatial skill Spatial skills can be developed in a number of ways one of which may include playing video

games Research gathered from a survey and mapping exercise indicates that though video games may not have a statistically significant impact on wayfinding experience does When properly utilized video games could become part of that important spatial skill training experience

Social Virtual Worlds and Their Places Merrill L. Johnson, 2022-06-11 This book provides a foundational look at social virtual worlds from the geographer's perspective How can the geographer's craft be applied to social virtual worlds This question is addressed through careful analysis of what social virtual worlds are how interest in these worlds has waxed and waned during the twenty first century and the meaning of their concocted spaces Examining one of the key features of the social virtual world the avatar the book focuses on its user's motivations and identity choices The book draws on the geographical understanding of place to examine where avatars live work and roam and describes how virtual world places resemble and diverge from actual world places A mixed methods survey conducted in Second Life adds additional breadth to the discussion whilst a series of vignettes gives extra life to the subject matter This original exploration of the content and meaning of social virtual worlds is an essential resource for geographers and for anyone interested in the virtual world experience

Geographic Interpretations of the Internet Aharon Kellerman, 2016-04-26 This book introduces the Internet through a systematic geographical interpretation thus shedding light on the Internet as a spatial entity The book's approach is to extend basic concepts developed for terrestrial geography to cyberspace most notably those relating to space structure place distance mobility and presence It further considers the Internet by its constitution of information space communications space and screen space By using well known concepts from traditional human geography this book proposes a combination of terrestrial and virtual geographies which may in turn help in coping with Internet structures and contents The book appeals to human and economic geographers especially those interested in information and Internet geographies It may also be of special interest and importance to sociologists and media scholars and students dealing with communication technology and the Internet

Geographies of Media and Communication Paul C. Adams, 2009-03-09 This book systematically analyzes the relationship between geography and communication and shows how geographical approaches open up familiar and unfamiliar aspects of communication for analysis and discussion

Earth Online Michael E. Ritter, 1996 An Internet guide written for the earth sciences This text provides the tool to get your students up and running on the Internet while providing guidance and exercises to immediately apply what they have learned by visiting the Earth Online home page

Philosophy and Geography III Andrew Light, Jonathan M. Smith, 1998-12-23 Places are today subject to contrary tendencies They lose some functions which may scale up to fewer more centralized places or down to numerous more dispersed places and they gain other functions which are scaling up and down from other places This prompts premature prophecies of the abolition of space and the obsolescence of place At the same time a growing literature testifies to the persistence of place as an incorrigible aspect of human experience identity and morality Place is a common ground for thought and action a community of experienced particulars

that avoids solipsism and universalism It draws us into the philosophy of the ordinary into familiarity as a form of knowledge into the wisdom of proximity Each of these essays offers a philosophy of place and reminds us that such philosophies ultimately decide how we make use and understand places whether as accidents instruments or fields of care

Encyclopedia of Networked and Virtual Organizations Goran Putnik, Maria Manuela Cunha, 2008 This book documents the most relevant contributions to the introduction of networked dynamic agile and virtual organizational models definitions taxonomies opportunities and reference models and architectures It creates a repository of the main developments regarding the virtual organization compiling definitions characteristics comparisons advantages practices enabling technologies and best practices Provided by publisher **Geography, Identity, and Embodiment in Virtual Reality** Ken Hillis, 1996

Geography, 2010 *Cartogram Representations of Self-organizing Virtual Geographies* Àngela Martín, 2013 Model interpretability is a problem for multivariate data in general and very specifically for dimensionality reduction techniques as applied to data visualization The problem is even bigger for nonlinear dimensionality reduction NLDR methods to which interpretability limitations are consubstantial Data visualization is a key process for knowledge extraction from data that helps us to gain insights into the observed data structure through graphical representations and metaphors NLDR techniques provide flexible visual insight but the locally varying representation distortion they generate makes interpretation far from intuitive For some NLDR models indirect quantitative measures of this mapping distortion can be calculated explicitly and used as part of an interpretative post processing of the results In this Master Thesis we apply a cartogram method inspired on techniques of geographic representation to the purpose of data visualization using NLDR models In particular we show how this method allows reintroducing the distortion measured in the visual maps of several self organizing clustering methods The main capabilities and limitations of the cartogram visualization of multivariate data using standard and hierarchical self organizing models were investigated in some detail with artificial data as well as with real information stemming from a neuro oncology problem that involves the discrimination of human brain tumor types a problem for which knowledge discovery techniques in general and data visualization in particular should be useful tools Geography and Applied Cartography, 2003 Contributed papers presented at the seminar
