The Arbovirus Profiles and Interactions With Hosts - Preparing for Emerging Diseases Shu Shen, Fei Deng, Na Jia, Han Xia, Ali Zohaib, 2022-11-02

History of Arbovirology: Memories from the Field Nikos Vasilakis, Laura D. Kramer, 2023-07-29 These books bring together a panel of expert arbovirologists who recall the history of arbovirology from very personal perspectives In these timely volumes the authors describe seminal moments in their experiences in the field and how they integrated these findings with lab studies to further clarify the ecology and epidemiology of diverse arboviruses Authors identify the most pressing questions that remain to be answered providing a basis for current research and a stimulus to engage those entering the field Over the last 20 years a generational gap has developed between the giants of arbovirus research and discovery and the new generation This gap developed due to an ebbing of training and investment in passing the scepter to the next generation leading to a lack of continuity among the generations that threatens to derail the rich history of virus discovery field epidemiology and understanding of the richness of diversity that surrounds us This lack of continuity may have immediate and disastrous consequences for public health

when yet to be discovered arboviruses emerge The purpose of these books is to bridge this gap by providing a historical context for the work being done today and provide continuity between the generations To this end the books provide a narrative of the thrill of scientific discovery and excitement of field adventures and lab studies of that generation essential reading for every arbovirologist and highly recommended for all virologists and public health officials as well as those students considering future research options Volume I consists of the personal reflections of arbovirologists who played a significant role in the advancement of arbovirology across the globe Volume II transitions to descriptions of region specific and virus family specific perspectives of arbovirology as well as recollections of the early events of molecular advances and pathogenesis studies Leukemia in Animals and Man H. J. Bendixen, 1968-08-19 *A History of Experimental Virology* Alfred Grafe, 2012-12-06 By their powers of reason scientists will be able to extract from nature the answers to their questions From Critique of Pure Reason 1781 Immanuel Kant 1724 1804 German Philosopher History is a composite of stories The history of the biological disciplines has been written by all those who opened the gates of new knowledge by generating ideas and the experiments to support them Previous authors have attempted various approaches to the history of virology as is reflected in the numerous books and book series issuing from the publishing houses This volume is an attempt at a comprehensive yet compact survey of virology which has meant penetrating the rigid limits of the separate disciplines of biology in which virologists have worked Writing this history of experimental virology was really a search for the origins and for vital signposts to portray the wide scope of the knowledge attained thus far This was done in complete awareness of the fact that every presentation depends heavily upon the perspective of the observer and of necessity communicates only a part of the whole The present scientific story hopes to recount the most important knowledge achieved during this past century the first century of the exciting developments in virology Biomedical Index to PHS-supported Research, 1991 The History of Cancer James S. Olson, 1989-06-26 Historian James S Olson has prepared a comprehensive annotated bibliography of the history of cancer The emphasis of this work is not so much on the medical aspects of cancer as it is on the historical documentation of the disease its etiology pathology epidemiology forms and manifestations and the men and women who have distinguished themselves in the study and treatment of the disease The book opens with a section devoted to the historical background of our knowledge of cancer and important medical nonmedical personalities The next section deals with the etiology of cancer its genesis epidemiology pathology and research and control The largest part of the bibliography is devoted to the individual malignant diseases Olson concludes with sections on the diagnosis and treatment of cancer clinical services and cancer institutions The citations include books articles from scholarly and general periodicals medical and government publications and primary and secondary sources The annotations are descriptive An important contribution to the study of medical history Olson's bibliography will be of interest to scholars students and those involved in the medical and scientific study of cancer *Molecular Basis of Host-virus Interaction* Maharani Chakravorty, 1979 Biochemistry
