Visual Psychophysics From Laboratory To Theory:

Visual Psychophysics Zhong-Lin Lu, Barbara Doshier, 2013-10-11 A comprehensive treatment of the skills and techniques needed for visual psychophysics from basic tools to sophisticated data analysis Vision is one of the most active areas in biomedical research and visual psychophysical techniques are a foundational methodology for this research enterprise Visual psychophysics which studies the relationship between the physical world and human behavior is a classical field of study that has widespread applications in modern vision science Bridging the gap between theory and practice this textbook provides a comprehensive treatment of visual psychophysics teaching not only basic techniques but also sophisticated data analysis methodologies and theoretical approaches It begins with practical information about setting up a vision lab and goes on to discuss the creation manipulation and display of visual images timing and integration of displays with measurements of brain activities and other relevant techniques experimental designs estimation of behavioral functions and examples of psychophysics in applied and clinical settings The book's treatment of experimental designs presents the most commonly used psychophysical paradigms theory driven psychophysical experiments and the analysis of these procedures in a signal detection theory framework The book discusses the theoretical underpinnings of data analysis and scientific interpretation presenting data analysis techniques that include model fitting model comparison and a general framework for optimized adaptive testing methods It includes many sample programs in Matlab with functions from Psychtoolbox a free toolbox for real time experimental control Once students and researchers have mastered the material in this book they will have the skills to apply visual psychophysics to cutting edge vision science Perceptual Learning Barbara Doshier, Zhong-Lin Lu, 2020-10-13 A comprehensive and integrated introduction to the phenomena and theories of perceptual learning focusing on the visual domain Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast to learning in the cognitive or motor domains and it has become an active area of research of both theoretical and practical significance This book offers a comprehensive introduction to the phenomena and theories of perceptual learning focusing on the visual domain Perceptual Learning explores the tradeoff between the competing goals of system stability and system adaptability signal and noise retuning and reweighting and top down versus bottom down processes It examines and evaluates existing research and potential future directions including evidence from behavior physiology and brain imaging and existing perceptual learning applications with a focus on important theories and computational models It also compares visual learning to learning in other perceptual domains and considers the application of visual training methods in the development of perceptual expertise and education as well as in remediation for limiting visual conditions It provides an integrated treatment of the subject for students and researchers and for practitioners who want to incorporate perceptual learning into their practice Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called

perceptual learning in contrast with learning in the cognitive or motor domains Perceptual learning has been a very active area of research of both theoretical and practical interest Research on perceptual learning is of theoretical significance in illuminating plasticity in adult perceptual systems and in understanding the limitations of human information processing and how to improve them It is of practical significance as a potential method for the development of perceptual expertise in the normal population for its potential in advancing development and supporting healthy aging and for noninvasive amelioration of deficits in challenged populations by training Perceptual learning has become an increasingly important topic in biomedical research Practitioners in this area include science disciplines such as psychology neuroscience computer sciences and optometry and developers in applied areas of learning game design cognitive development and aging and military and biomedical applications Commercial development of training products protocols and games is a multi billion dollar industry Perceptual learning provides the basis for many of the developments in these areas This book is written for anyone who wants to understand the phenomena and theories of perceptual learning or to apply the technology of perceptual learning to the development of training methods and products Our aim is to provide an introduction to those researchers and students just entering this exciting field to provide a comprehensive and integrated treatment of the phenomena and the theories of perceptual learning for active perceptual learning researchers and to describe and develop the basic techniques and principles for readers who want to successfully incorporate perceptual learning into applied developments The book considers the special challenges of perceptual learning that balance the competing goals of system stability and system adaptability It provides a systematic treatment of the major phenomena and models in perceptual learning the determinants of successful learning and of specificity and transfer The book provides a cohesive consideration of the broad range of perceptual learning through the theoretical framework of incremental learning of reweighting evidence that supports successful task performance It provides a detailed analysis of the mechanisms by which perceptual learning improves perceptual limitations the relationship of perceptual learning and the critical period of development and the semi supervised modes of learning that dominate perceptual learning It considers limitations and constraints on learning multiple tasks and stimuli simultaneously the implications of training at high or low levels of performance accuracy and the importance of feedback to perceptual learning The basis of perceptual learning in physiology is discussed along with the relationship of visual perceptual learning to learning in other sensory domains The book considers the applications of perceptual learning in the development of expertise in education and gaming in training during development and aging and applications to remediation of mental health and vision disorders Finally it applies the phenomena and models of perceptual learning to considerations of optimizing training

Biologically Inspired Computer Vision Gabriel Cristobal, Laurent Perrinet, Matthias S. Keil, 2015-08-20 As the state of the art imaging technologies became more and more advanced yielding scientific data at unprecedented detail and volume the need to process and interpret all the data has made image processing and computer

vision increasingly important Sources of data that have to be routinely dealt with today s applications include video transmission wireless communication automatic fingerprint processing massive databanks non weary and accurate automatic airport screening robust night vision just to name a few Multidisciplinary inputs from other disciplines such as physics computational neuroscience cognitive science mathematics and biology will have a fundamental impact in the progress of imaging and vision sciences One of the advantages of the study of biological organisms is to devise very different type of computational paradigms by implementing a neural network with a high degree of local connectivity This is a comprehensive and rigorous reference in the area of biologically motivated vision sensors The study of biologically visual systems can be considered as a two way avenue On the one hand biological organisms can provide a source of inspiration for new computational efficient and robust vision models and on the other hand machine vision approaches can provide new insights for understanding biological visual systems Along the different chapters this book covers a wide range of topics from fundamental to more specialized topics including visual analysis based on a computational level hardware implementation and the design of new more advanced vision sensors The last two sections of the book provide an overview of a few representative applications and current state of the art of the research in this area This makes it a valuable book for graduate Master PhD students and also researchers in the field
