GIS Cartography Gretchen N. Peterson, 2020-11-24 Since the publication of the bestselling second edition 5 years ago vast and new globally relevant geographic datasets have become available to cartography practitioners and with this has come the need for new ways to visualize them in maps as well as new challenges in ethically disseminating the visualizations With new features and significant updates that address these changes this edition remains faithful to the original vision that cartography instruction should be software agnostic Discussing map design theory and technique rather than map design tools this book focuses on digital cartography and its best practices This third edition has completely new sections on how to deal with maps that go viral and the ethics therein new presentation ideas new features such as amenities climate data and hazards the new Equal Earth projection and vector tile design considerations All chapters are thoroughly updated with new illustrations and new sections for datasets that didn't exist when the second edition was published as well as new techniques

and trends in cartography New in the third edition A true textbook written with a friendly style and excellent examples explaining everything from layout design to fonts and colors to specific design considerations for individual feature types to static and dynamic cartography issues Thoroughly updated with new features such as points of interest climate data hazards and buildings new projections such as the Equal Earth projection and the Spilhaus projection and vector tile design considerations such as label placement techniques and tricks for making world class basemaps Includes over 70 new map examples that display the latest techniques in cartography Reflects on new developments in color palettes visualization patterns datums and non static output media such as animation interaction and large format cinematic techniques that weren't available for the second edition Defines and illustrates new terms that have made their way into the profession over the last few years such as story maps flow maps Dorling cartograms spec sheets bivariate choropleths firefly cartography Tanaka contours and value by alpha In this third edition author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation focusing on the elements of good design what makes a good map and how to get there rather than specific software tools She provides a reference that you can thumb through time and again as you create your maps Copiously illustrated the third edition explores novel concepts that kick start your pursuit of map making excellence The book doesn't just teach you how to design and create good maps it teaches you how to design and create superior maps

GIS Cartography Gretchen N. Peterson, 2025-02-03 The new edition of this well established introductory cartography textbook is updated to respond to the demand for critical engagement with new technologies the passion for inclusive design and for preparing students to build competence in fundamental skills Written in a friendly style it is enjoyable to read and includes over 200 figures and maps explaining everything from layout design to dynamic cartography issues A new chapter discusses the role of artificial intelligence AI in cartography and a significant expansion to 3D cartography has been incorporated into existing chapters A new chapter on accessibility provides a thorough understanding of universal design Additional updates include placements and best practices for digital map elements global labeling techniques including language support hybrid map styling multiscale map testing and information on 4D mapping New in the Fourth Edition Exploration of geospatial AI and generative AI in cartography and how they can already make an impact on workflows New material on vision motor and cognitive accessibility techniques in map design Expanded discussion on 3D cartography All chapters are updated with new data and important new developments in cartography including the importance of accessible design to ensure inclusivity for all users Updated study questions and exercises to enhance student engagement and comprehension New discussions of techniques such as aquarium cutaways integrated north arrows joy plots hybrid satellite maps crafted hachuring as well as updated information on resolution and file types This book is written as a go to guide for learning the art and science of mapmaking It is for undergraduate and graduate students taking courses in GIS and cartography and studying fields such as geography geophysics environmental engineering urban planning and so on It is also a valuable resource for professionals

interested in learning techniques and technologies for creating maps and visualizing geospatial datasets **Designed Maps**
 Cynthia A. Brewer, 2008 This sequel to the highly successful *Designing Maps* offers a graphics intensive presentation of published maps providing cartographic examples that GIS users can then adapt for their own needs Each chapter characterizes a common design decision and includes a demonstration map which is annotated with specific information needed to reproduce the design such as text fonts sizes and styles line weights colors and patterns marker symbol fonts sizes and colors and fill colors and patterns Visual hierarchies and the purpose of each map are considered with the audience in mind drawing a clear connection between intent and design The book also includes a valuable task index that explains what ArcGIS 9 tools to use for desired cartographic effects From experienced cartographers to those who make GIS maps only occasionally all GIS users will find this book to be an indispensable resource **GIS Cartography** Gretchen N. Peterson, 2014-05-23 In the five years since the publication of the first edition of *A Guide to Effective Map Design* cartography and software have become further intertwined However the initial motivation for publishing the first edition is still valid many GISers enter the field without so much as one hour of design instruction in their formal education Yet they are then tasked with creating one the most effective easily recognized communication tools a map See What's New in the Second Edition Projection theory Hexagonal binning Big Data point density maps Scale dependent map design 3D building modeling Digital cartography and its best practices Updated graphics and references Study questions and lab exercises at the end of each chapter In this second edition of a bestseller author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation focusing on the elements of good design what makes a good map and how to get there rather than specific software tools She provides a reference that you can thumb through time and again as you create your maps Copiously illustrated the second edition explores novel concepts that kick start your pursuit of map making excellence The book doesn't just teach you how to design and create maps it teaches you how to design and create better maps *The Map Reader* Martin Dodge, Rob Kitchin, Chris Perkins, 2011-05-09 WINNER OF THE CANTEMIR PRIZE 2012 awarded by the Berendel Foundation The *Map Reader* brings together for the first time classic and hard to find articles on mapping This book provides a wide ranging and coherent edited compendium of key scholarly writing about the changing nature of cartography over the last half century The editorial selection of fifty four theoretical and thought provoking texts demonstrates how cartography works as a powerful representational form and explores how different mapping practices have been conceptualised in particular scholarly contexts Themes covered include paradigms politics people aesthetics and technology Original interpretative essays set the literature into intellectual context within these themes Excerpts are drawn from leading scholars and researchers in a range of cognate fields including Cartography Geography Anthropology Architecture Engineering Computer Science and Graphic Design The *Map Reader* provides a new unique single source reference to the essential literature in the cartographic field more than fifty specially edited excerpts from key classic articles

and monographs critical introductions by experienced experts in the field focused coverage of key mapping practices techniques and ideas a valuable resource suited to a broad spectrum of researchers and students working in cartography and GIScience geography the social sciences media studies and visual arts full page colour illustrations of significant maps as provocative visual think pieces fully indexed clearly structured and accessible ways into a fast changing field of cartographic research

Designing Better Maps Cynthia A. Brewer, 2005 Describing how to build balanced map layouts suited to varied mapping goals this guide focuses on export options that suit different media and can be edited in other applications The wide range of text characteristics needed for expert map design as well as how to improve map readability with type effects such as character spacing leading callouts shadows and halos is detailed Tips are included for using font tools in the Windows operating system such as creating special characters in map text as is information on using text characteristics to indicate feature locations categories and hierarchies on maps How cartographic conventions guide placement of labels for point line and area features are also explained [A Research Guide to Cartographic Resources](#) Eva H.

Dodsworth, 2018-09-22 The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online offering researchers academics and students with information on how to locate and access the large variety of resources new and old Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations A Research Guide to Cartographic Resources consists of 18 chapters two appendices and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides including cartographic categories such as atlases dictionaries gazetteers handbooks maps plans GIS data and other related material Almost all of the resources listed in this guide are categorized by geography down to the county level making efficient work of the type of material required to meet the information needs of those interested in researching place specific cartographic related resources Additionally this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries geospatial centers and their related websites Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level This volume combines the traditional and historical collections of cartography with the modern applications of GIS based maps and geospatial datasets **Springer**

Handbook of Geographic Information Wolfgang Kresse, David Danko, 2022-06-24 This handbook provides an exhaustive one stop reference and a state of the art description of geographic information and its use This new substantially updated edition presents a complete and rigorous overview of the fundamentals methods and applications of the multidisciplinary field of geographic information systems Designed to be a useful and readable desk reference book but also prepared in

various electronic formats this title allows fast yet comprehensive review and easy retrieval of essential reliable key information The Springer Handbook of Geographic Information is divided into three parts Part A Basics and Computer Science provides an overview on the fundamentals including descriptions of databases and encoding of geographic information It also covers the underlying mathematical and statistics methods and modeling A new chapter exemplifies the emerging use and analysis of big data in a geographic context Part B offers rigorous descriptions of gathering processing and coding of geographic information in a standardized way to allow interoperable use in a variety of systems from traditional methods such as geodesy and surveying to state of the art remote sensing and photogrammetry from cartography to geospatial web services Discussions on geosemantic interoperability and security of open distributed geospatial information systems complete the comprehensive coverage The final part describes a wide array of applications in science industry and society at large such as agriculture defense transportation energy and utilities health and human services The part is enhanced by new chapters on smart cities and building information modeling as well as a complete overview of the currently available open source geographic information systems Using standardized international terminology in accordance with ISO TC 211 and INSPIRE this handbook facilitates collaboration between different disciplines and is a must have for practitioners and new comers in industry and academia

Cartography Menno-Jan Kraak, Ferjan Ormeling, 2020-07-28 This Fourth Edition of Cartography Visualization of Geospatial Data serves as an excellent introduction to general cartographic principles It is an examination of the best ways to optimize the visualization and use of spatiotemporal data Fully revised it incorporates all the changes and new developments in the world of maps such as OpenStreetMap and GPS Global Positioning System based crowdsourcing and the use of new web mapping technology and adds new case studies and examples Now printed in colour throughout this edition provides students with the knowledge and skills needed to read and understand maps and mapping changes and offers professional cartographers an updated reference with the latest developments in cartography Written by the leading scholars in cartography this work is a comprehensive resource perfect for senior undergraduate and graduate students taking courses in GIS geographic information system and cartography New in This Edition Provides an excellent introduction to general cartographic visualization principles through full colour figures and images Addresses significant changes in data sources technologies and methodologies including the movement towards more open data sources and systems for mapping Includes new case studies and new examples for illustrating current trends in mapping Provides a societal and institutional framework in which future mapmakers are likely to operate based on UN global development sustainability goals
