Kaschula, Monwabisi K. Ralarala, Georgina Heydon, 2023-09-08 The research represented in this volume and in the series as a whole is intended to provide critical analyses and findings that can underpin the development of language policies practice guides and other resources that support a fair and accessible legal system However this will also require well developed teaching and research programmes so it is our intention that this volume will continue to support the growth of forensic linguistics in Southern African universities and nurture the next generation of scholars dedicated to forensic and legal linguistics This aim will be supported by the newly formed African Association of Forensic and Legal Linguists AAFL which will help to coordinate the study of forensic linguistics in Africa This book series Studies in Forensic and Legal Linguistics in Africa and Beyond Volumes I II III and IV continues to play an important role in bringing African forensic linguistic scholarship to a wider audience while simultaneously promoting the field amongst academic and legal institutions in Africa **Machine Learning Methods for Stylometry** Jacques Savoy, 2020-09-28 This book presents methods and approaches used to identify the true author of a doubtful document or text excerpt It provides a broad introduction to all text categorization problems like authorship attribution psychological traits of the author detecting fake news etc grounded in stylistic features Specifically machine learning models as valuable tools for verifying hypotheses or revealing significant patterns hidden in datasets are presented in detail Stylometry is a multi disciplinary field combining linguistics with both statistics and computer science The content is divided into three parts The first which consists of the first three chapters offers a general introduction to stylometry its potential applications and limitations Further it introduces

the ongoing example used to illustrate the concepts discussed throughout the remainder of the book. The four chapters of the second part are more devoted to computer science with a focus on machine learning models. Their main aim is to explain machine learning models for solving stylometric problems. Several general strategies used to identify, extract, select, and represent stylistic markers are explained. As deep learning represents an active field of research, information on neural network models and word embeddings applied to stylometry is provided, as well as a general introduction to the deep learning approach to solving stylometric questions. In turn, the third part illustrates the application of the previously discussed approaches in real cases: an authorship attribution problem seeking to discover the secret hand behind the *nom de plume* Elena Ferrante, an Italian writer known worldwide for her *My Brilliant Friend* s saga; author profiling in order to identify whether a set of tweets were generated by a bot or a human being; and in this second case, whether it is a man or a woman; and an exploration of stylistic variations over time using US political speeches covering a period of ca. 230 years. A solutions-based approach is adopted throughout the book, and explanations are supported by examples written in R. To complement the main content and discussions on stylometric models and techniques, examples and datasets are freely available at the author s Github website: [Linguistic Fingerprints](#). Roger Kreuz, 2023-08-01.

How much of ourselves do we disclose when we speak or write? A person s accent may reveal, for example, whether they hail from Australia or Ireland or Mississippi. But it s not just where we were born; we divulge all sorts of information about ourselves and our identity through language. Level of education, gender, age, and even aspects of our personality can all be reliably determined by our vocabulary and grammar. To those who know what to look for, we give ourselves away every time we open our mouths or tap on a keyboard. But how unique is a person s linguistic identity? Can language be used to identify a specific person? To identify or to exonerate a murder suspect? To determine who authored a particular book? The answer to all these questions is yes. Forensic and computational linguists have developed methods that allow linguistic fingerprinting to be used in law enforcement. Similar techniques are used by literary scholars to identify the authors of anonymous or contested works of literature. Many people have heard that linguistic analysis helped to catch the Unabomber or to unmask an anonymous editorialist, but how is it done? **LINGUISTIC FINGERPRINTS** will explain how these methods were developed and how they are used to solve forensic and literary mysteries. But these techniques aren t perfect, and the book will also include some cautionary tales about mistaken linguistic identity. [Teaching and Researching Writing](#). Ken Hyland, 2015-11-19.
