Foundations of Metacognition Michael J. Beran, Johannes Brandl, Josef Perner, Joëlle Proust, 2012-09-06 Metacognition refers to the awareness an individual has of their own mental processes also referred to as thinking about thinking In the past thirty years metacognition research has become a rapidly growing field of interdisciplinary research within the cognitive sciences Just recently there have been major changes in this field stimulated by the controversial issues of metacognition in nonhuman animals and in early infancy Consequently the question what defines a metacognitive process has become a matter of debate how should one distinguish between simple minds that are not yet capable of any metacognitive processing and minds with a more advanced architecture that exhibit such a capacity Do nonhuman animals possess the ability to monitor their own mental actions If metacognition is unique to humans then at what stage in development does it occur and how can we distinguish between cognitive and metacognitive processes The Foundations of Metacognition brings together leading cognitive scientists to consider these questions It explores them from three different perspectives from an evolutionary point of view the authors ask whether there is sufficient evidence that some non human primates or other animals monitor their mental states and

thereby exhibit a form of metacognition From a developmental perspective the authors ask when children start to monitor evaluate and control their own minds And from a philosophical point of view the main issue is how to draw the line between cognitive and metacognitive processes and how to integrate the different functions in which metacognition is involved into a single coherent picture of the mind The foundations of metacognition whatever they will turn out to be have to be as complex as this pattern of connections we discover in its effects Bringing together researchers from across the cognitive sciences the book is valuable for philosophers of mind developmental and comparative psychologists and neuroscientists

Editorial: Best Practice Approaches for Mixed Methods Research in Psychological Science M. Teresa Anguera,Angel Blanco-Villaseñor,Gudberg K. Jonsson,José Luis Losada,Mariona Portell,2021-01-21 **L2 Dynamic Assessment Research in China** Matthew E. Poehner,James P. Lantolf,2025-06-24 Dynamic Assessment is an innovative approach to revealing the full range of learner abilities that has rapidly gained attention from language educators and researchers While much of the research to date has examined Dynamic Assessment in Western countries the research in this book further extends the framework by documenting its uses by Chinese scholars in meeting context specific challenges Dynamic Assessment or DA originated in the writings of Russian psychologist L S Vygotsky concerning the concept of the Zone of Proximal Development While many assessment approaches call for closer integration with teaching DA embeds an instructional component referred to as mediation as part of the assessment procedure Following Vygotsky the picture of a person s abilities is incomplete if focus is restricted to past development as diagnosed by what the person can achieve

independently and without considering those abilities that are emerging as revealed through responsiveness to mediation In this way DA offers insights into learner abilities not easily obtained through other assessments Widely employed in special education and general abilities testing the second language field has witnessed a rapid growth of interest in using DA to better understand the full range of learner language abilities and to determine how instruction can optimally promote the development of all learners This book brings together a collection of original studies conducted by scholars in China that build upon methods and principles from previous DA research and that leverage them to meet local demands In so doing this research collectively illustrates the extension of DA into new cultural contexts while simultaneously yielding findings that are sure to resonate with language educators assessors and researchers around the world This book was originally published as a special issue of Language Assessment Quarterly
