Trichloroethylene Tetrachloroethylene Chlorinated Monographs Carcinogenic:

Trichloroethylene, Tetrachloroethylene, and Some Other Chlorinated Agents IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2014 This volume of the IARC monographs provides an assessment of the carcinogenic hazards associated with exposure to seven chlorinated solvents including trichloroethylene tetrachloroethylene and their metabolites dichloroacetic acid trichloroacetic acid and chloral hydrate All these agents were previously assessed by IARC Working Groups more than 10 years ago and new epidemiological and mechanistic evidence has been considered in this reevaluation Trichloroethylene has been used in several industries such as manufacture and repair of aircraft and automobiles and in screw cutting while tetrachloroethylene is widely used in dry cleaning and as a feedstock for the production of chlorinated chemicals The IARC Monographs Working Group relied on epidemiological evidence carcinogenicity bioassays and mechanistic and other relevant data to evaluate the carcinogenic hazards to humans exposed to these agents

Toxicogenomics in Predictive Carcinogenicity Russell S Thomas, Michael D Waters, 2016-06-16 Research over the past decade has demonstrated that TGx methods of various types can be used to discriminate modes of mutagenesis as a function of dose TGx can quickly inform safety evaluation regarding potential mechanisms of conventional outcomes and can provide essential dose response information This can then be used to ascertain the sequence of key events in a putative mode of action as may apply in quantitative cancer risk assessment With the increasing complexity of research in mode of action investigations it is important to gain a better understanding of approaches to data integration and health risk assessment Furthermore it is essential to consider how novel test systems and newer methods and approaches may be used in future to gain a better understanding of mechanisms Toxicogenomics in Predictive Carcinogenicity describes toxicogenomics methods in predictive carcinogenicity testing mode of action and safety evaluation and cancer risk assessment It illustrates these methods using case studies that have yielded significant new information on compounds and classes of compounds that have proven difficult to evaluate using conventional methods alone This book additionally covers current and potential toxicogenomic research using stem cells as well as new bioinformatics methods for drug discovery and environmental toxicology This publication is an indispensable tool for postgraduates academics and industrialists working in biochemistry genomics carcinogenesis pathology pharmaceuticals food technology bioinformatics risk assessment and environmental toxicology

Tragic Failures Carl F. Cranor, 2017 A world awash in little understood chemicals tragically harms adults and children alike Laws keep health agencies in the dark about toxicants slow well motivated research hampers protections and strenuous vested opposition exacerbates the harm How science is used in the tort law can facilitate or frustrate redress of harm This book recommends better approaches

Review of the Department of Labor's Site Exposure Matrix Database Institute of Medicine, Board on the Health of Select Populations, Committee on the Review of the Department of Labor's Site Exposure Matrix (SEM) Database, 2013-04-14 Beginning with the development of the atomic bomb during World War II the United States continued to build nuclear weapons throughout the Cold War Thousands of people mined and milled uranium conducted research on nuclear warfare or worked in nuclear munitions factories around the country from the 1940s through the 1980s Such work continues today albeit to a smaller extent The Department of Energy DOE is now responsible for overseeing those sites and facilities many of which were and continue to be run by government contractors The materials used at those sites were varied and ranged from the benign to the toxic and highly radioactive Workers at DOE facilities often did not know the identity of the materials with which they worked and often were unaware of health risks related to their use In many instances the work was considered top secret and employees were cautioned not to reveal any work related information to family or others Workers could be exposed to both radioactive and nonradioactive toxic substances for weeks or even years Consequently some of the workers have developed health problems and continue to have concerns about potential health effects of their exposures to

occupational hazards during their employment in the nuclear weapons industry In response to the concerns expressed by workers and their representatives DOL asked the Institute of Medicine IOM to review the SEM database and its use of a particular database Haz Map as the source of its toxic substance occupational disease links Accordingly this IOM consensus report reflects careful consideration of its charge by the committee and describes the strengths and shortcomings of both To complete its task IOM formed an ad hoc committee of experts in occupational medicine toxicology epidemiology industrial hygiene public health and biostatistics to conduct an 18 month study to review the scientific rigor of the SEM database The committee held two public meetings at which it heard from DOL Division of Energy Employee Occupational Illness Compensation DEEOIC representatives the DOL contractor that developed the SEM database the developer of the Haz Map database DOE worker advocacy groups and several individual workers The committee also submitted written questions to DOL to seek clarification of specific issues and received written responses from DEEOIC The committee s report considers both the strengths and weaknesses of the SEM and the Haz Map databases recognizing that the latter was developed first and for a different purpose The committee then discusses its findings and recommends improvements that could be made in both databases with a focus on enhancing the usability of SEM for both DOL claims examiners and for former DOE workers and their representatives Review of the Department of Labor s Site Exposure Matrix Database summarizes the committee s findings Potential Industrial Carcinogens and Mutagens L.
