

Understanding DVT

Deep Vein Thrombosis

What is the Venous System?
The venous system is the part of the circulatory system that carries blood from the tissues back to the heart. It is a complex network of veins that branch out from the heart to the rest of the body.

How does it work?

The venous system works by using the pressure of the heart to pump blood through the veins. The veins have valves that prevent blood from flowing back, ensuring it moves towards the heart.

Types and Subtypes of DVT
DVT can be classified into two main types: proximal and distal. Proximal DVT occurs in the upper part of the leg (thighs and pelvis), while distal DVT occurs in the lower part (calf and foot). There are also subtypes like acute and chronic DVT.

How does it affect you?
DVT can cause a variety of symptoms, including pain, swelling, and redness in the affected area. In some cases, it can lead to complications like pulmonary embolism, which is a life-threatening condition where a clot travels to the lungs.

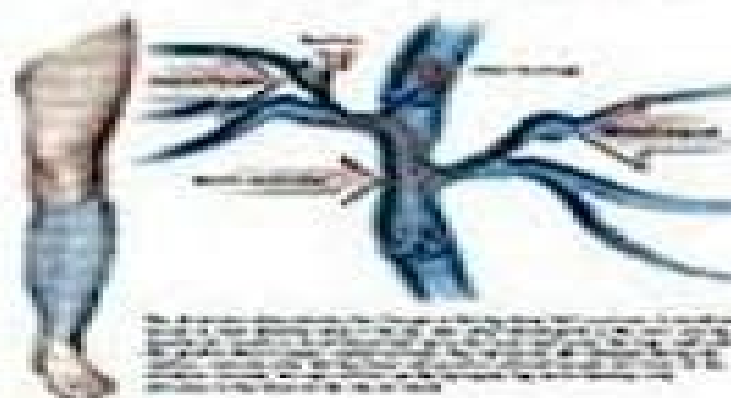

What is DVT?
DVT is a blood clot that forms in a deep vein, usually in the legs. It is a common condition that can be caused by a variety of factors, including surgery, immobility, and certain medical conditions.

What is a Pulmonary Embolism?
A pulmonary embolism is a blockage in one of the pulmonary arteries in the lungs. It is usually caused by a blood clot that has traveled from the legs or other parts of the body.

Chronic Venous Insufficiency

Chronic venous insufficiency is a condition where the veins in the legs are unable to pump blood back to the heart effectively. This can lead to swelling, pain, and other symptoms.

The venous system in the leg is responsible for carrying blood back to the heart. If there is a problem with the veins, it can lead to various complications, including DVT and chronic venous insufficiency.

Warning: Control of your DVT
It is important to control your DVT to prevent complications. This can be done by taking medication, wearing compression stockings, and staying active.

Prevention and Diagnosis of DVT
DVT can be prevented by taking certain precautions, such as staying hydrated, moving regularly, and wearing compression stockings. It can also be diagnosed through various tests, including ultrasound and blood tests.

Post-Translational Modifications (PTMs) in Human Cancer: Pharmacological Insights and Therapeutic Opportunities Lei Huang, Hang Song, Pedro Ayuso Parejo, 2025-08-21

Human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation Post translational modifications PTMs of proteins play a critical role in cancer development and progression PTMs are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell Pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body Pharmacological interventions that target PTMs are a promising area of cancer research and treatment For example PARP Inhibitors Poly ADP ribose polymerase PARP inhibitors are a class of drugs that exploit defects in DNA repair mechanisms particularly in cells with BRCA mutations These inhibitors target the PARP protein which plays a role in DNA repair through PTM processes PARP inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers Ubiquitin Proteasome System UPS Inhibitors The UPS is responsible for the degradation of specific proteins tagged with ubiquitin Some drugs such as bortezomib inhibit the UPS leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells SUMOylation Inhibitors Small ubiquitin like modifier SUMO modification is a PTM that regulates the activity of various proteins Recent research has explored the development of SUMOylation inhibitors to target specific cancer related proteins These are still in the experimental stage The effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics It's important to note that the development and application of these therapies often require a deep understanding of the specific PTMs and their roles in the molecular pathways of different cancer types Additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique PTM profiles

and genetic mutations of individual patients tumors Personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches Personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits This Research Topic will focus on post translational modifications PTMs and their role in human cancer within the field of pharmacology This is a highly relevant and significant area of study as understanding how PTMs contribute to cancer development and progression is critical for the development of targeted pharmacological interventions We welcome contributions in the form of Original Research Articles Reviews and Mini Reviews that cover but are not limited to the following topics a Post Translational Modifications PTMs in Cancer Molecular Mechanisms b Pharmacological Approaches Targeting PTMs in Cancer c Personalized Medicine and PTM Profiles d Emerging Trends and Future Directions Please note that If patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as additional clinical information and assessment of clinical response effects should be included If genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided Studies related to natural compounds herbal extracts or traditional medicine products will not be included in this Research Topic Studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this Research Topic

Cardiopulmonary Physical Therapy W. Darlene Reid, Frank Chung, Kylie Hill, 2024-06-01 *Cardiopulmonary Physical Therapy Management and Case Studies Second Edition* is a unique and succinct textbook for the classroom that blends clinical notes on assessment and management together with case based instructional approaches to cardiopulmonary care for acute and ambulatory care patients This one of a kind text describes current approaches that cover traditional physical therapist management strategies and includes evidence based chapters on early mobilization and exercise training on a wide range of cardiopulmonary patient groups The updated Second Edition presents twenty four cases that were designed to complement each chapter topic and represent the most common pulmonary cardiac and neurological conditions that are typically managed in cardiopulmonary care These cases have been carefully selected and developed over several years to illustrate a spectrum of clinical issues essential for the preparation of the entry level therapist The very interactive nature of the case history approach is engaging and provides the opportunity to work through many of the steps of the clinical decision making process *Cardiopulmonary Physical Therapy Management and Case Studies Second Edition* also includes answer guides for the questions posed in the assessment and management chapters as well as for the twenty four cases New in the Second Edition Twenty four carefully selected evidence based cases designed to go hand in hand with chapter topics An international perspective that is relevant to physical therapy practice in several countries Detailed chapter on noninvasive

ventilation and mechanical ventilation Several chapters describe early mobilization and exercise training for a range of cardiopulmonary patient groups including those admitted to an intensive care unit Faculty will benefit from the Talk Me Through PowerPoint slides which provide a great opportunity for independent learning and complement classroom teaching The two fold evidence and case based learning approach used by Dr W Darlene Reid Frank Chung and Dr Kylie Hill allows for a more engaging experience The inclusion of interactive materials will allow students to learn and develop skills to prepare themselves for their professional transition while clinicians can use the text as a reference tool Brunner and Suddarth's Textbook of Medical-Surgical Nursing Janice L.
