Uneven Growth Tactical Urbanisms For Expanding:

Uneven Growth Pedro Gadanho, 2014 In 2030 the world's population will be a staggering eight billion people. Of these two thirds will live in cities and most will be poor. With limited resources this uneven growth will be one of the greatest challenges faced by societies across the globe. Over the next years city authorities, urban planners and designers, economists and many others will have to join forces to avoid major social and economical catastrophes, working together to ensure these expanding megacities will remain habitable. To engage this international debate The Museum of Modern Art presents *Uneven Growth: Tactical Urbanisms for Expanding Megacities*, its third iteration in the *Issues in Contemporary Architecture* series. Following the same model as the critically acclaimed *Rising Currents: Projects for New York's Waterfront and Foreclosed Rehousing the American Dream*, *Uneven Growth* brings together an international group of scholars, practitioners and experts of architecture and urbanism in a series of workshops, an exhibition and a publication to focus on how emergent forms of tactical urbanism can address the increasing inequality of urban development around the globe. Featuring proposals for six global metropolises: New York, Mumbai, Rio de Janeiro, Istanbul, Hong Kong and Lagos, each developed by a team pairing local practitioners with international researchers, *Uneven Growth* documents the brainstorming sessions and workshops. Interviews with each team and essays by leading scholars on the issue make the publication a rich resource for students and professionals alike and a catalyst for worldwide change.

The Social (Re)Production of Architecture Doina Petrescu, Kim Trogal, 2017-07-14 *The Social Re Production of Architecture* brings the debates of the right to the city into today's context of ecological, economic and social crises. Building on the 1970s discussions about the production of space which French sociologist Henri Lefebvre considered a civic right, the authors question who has the right to make space and explore the kinds of relations that are produced in the process. In the emerging post capitalist era, this book addresses urgent social and ecological imperatives for change and opens up questions around architecture's engagement with new forms of organization and practice. The book asks what new kinds of social can architecture re produce and what kinds of politics, values and actions are needed. The book features 24 interdisciplinary essays written by leading theorists and practitioners including social thinkers, economic theorists, architects, educators, urban curators, feminists, artists and activists from different generations and global contexts. The essays discuss the diverse global locations with work taking different and specific forms in these different contexts. A cutting edge critical text which rethinks both practice and theory in the light of recent crises, making it key reading for students, academics and practitioners.

Extreme Cities Ashley Dawson, 2017-10-17 A cutting exploration of how cities drive climate change while being on the frontlines of the coming climate crisis How will climate change affect

our lives Where will its impacts be most deeply felt Are we doing enough to protect ourselves from the coming chaos In Extreme Cities Ashley Dawson argues that cities are ground zero for climate change contributing the lion's share of carbon to the atmosphere while also lying on the frontlines of rising sea levels Today the majority of the world's megacities are located in coastal zones yet few of them are adequately prepared for the floods that will increasingly menace their shores Instead most continue to develop luxury waterfront condos for the elite and industrial facilities for corporations These not only intensify carbon emissions but also place coastal residents at greater risk when water levels rise In Extreme Cities Dawson offers an alarming portrait of the future of our cities describing the efforts of Staten Island New York and Shishmareff Alaska residents to relocate Holland's models for defending against the seas and the development of New York City before and after Hurricane Sandy Our best hope lies not with fortified sea walls he argues Rather it lies with urban movements already fighting to remake our cities in a more just and equitable way As much a harrowing study as a call to arms Extreme Cities is a necessary read for anyone concerned with the threat of global warming and of the cities of the world
