**Unified Methods for Censored Longitudinal Data and Causality** Mark J. van der Laan, James M Robins, 2012-11-12

During the last decades there has been an explosion in computation and information technology. This development comes with an expansion of complex observational studies and clinical trials in a variety of fields such as medicine, biology, epidemiology, sociology, and economics among many others which involve collection of large amounts of data on subjects or organisms over time. The goal of such studies can be formulated as estimation of a finite dimensional parameter of the population distribution corresponding to the observed time dependent process. Such estimation problems arise in survival analysis, causal inference, and regression analysis. This book provides a fundamental statistical framework for the analysis of complex longitudinal data. It provides the first comprehensive description of optimal estimation techniques based on time dependent data structures subject to informative censoring and treatment assignment in so called semiparametric models. Semiparametric models are particularly attractive since they allow the presence of large unmodeled nuisance parameters. These techniques include estimation of regression parameters in the familiar multivariate generalized linear regression and multiplicative intensity models. They go beyond standard statistical approaches by incorporating all the observed data to allow for informative censoring to obtain maximal efficiency and by developing estimators of causal effects. It can be used to teach masters and Ph D students in biostatistics and statistics and is suitable for researchers in statistics with a strong interest in the analysis of complex longitudinal data.

**Unified Methods for Censored Longitudinal Data and Causality** Mark J Van Der Laan, James M Robins, 2003-01-14 *Statistical Models and Methods for Biomedical and Technical Systems*

Filia Vonta, M.S. Nikulin, Nikolaos Limnios, Catherine Huber-Carol, 2008-03-05 This book deals with the mathematical aspects of survival analysis and reliability as well as other topics reflecting recent developments in the following areas: applications in epidemiology, probabilistic and statistical models and methods in reliability models and methods in survival analysis, longevity, aging and degradation, accelerated life models, quality of life, new statistical challenges in genomics. The work will be useful to a broad interdisciplinary readership of researchers and practitioners in applied probability and statistics, industrial statistics, biomedicine, biostatistics, and engineering.

Bayesian Nonparametrics for Causal Inference and Missing Data Michael J. Daniels, Antonio Linero, Jason Roy, 2023-08-23 Bayesian Nonparametrics for Causal Inference and Missing Data provides an overview of flexible Bayesian nonparametric BNP methods for modeling joint or conditional distributions and functional relationships and their interplay with causal inference and missing data. This book emphasizes the importance of making testable assumptions to identify estimands of interest such as missing at random assumption for missing data and unconfoundedness for causal inference in observational studies. Unlike parametric methods, the BNP approach can account for possible violations of assumptions and minimize concerns about model misspecification. The overall strategy is to first specify BNP models for observed data and then to specify additional uncheckable assumptions to identify estimands of

interest The book is divided into three parts Part I develops the key concepts in causal inference and missing data and reviews relevant concepts in Bayesian inference Part II introduces the fundamental BNP tools required to address causal inference and missing data problems Part III shows how the BNP approach can be applied in a variety of case studies The datasets in the case studies come from electronic health records data survey data cohort studies and randomized clinical trials Features Thorough discussion of both BNP and its interplay with causal inference and missing data How to use BNP and g computation for causal inference and non ignorable missingness How to derive and calibrate sensitivity parameters to assess sensitivity to deviations from uncheckable causal and or missingness assumptions Detailed case studies illustrating the application of BNP methods to causal inference and missing data R code and or packages to implement BNP in causal inference and missing data problems The book is primarily aimed at researchers and graduate students from statistics and biostatistics It will also serve as a useful practical reference for mathematically sophisticated epidemiologists and medical researchers
