Defence Industries in the 21st Century Çağlar Kurç, Richard A. Bitzinger, Stephanie G. Neuman, 2021-05-13 *Defence Industries in the 21st Century* explores the transformation in the global defence industrial production through examining the interaction between international and domestic factors. With the global defence industry and arms market likely continue to expand and mature the ways in which this progression could influence international politics remain obscure. In practice as the contents of this book show the defence industrial bases and arms export policies of emerging states display significant variance. This variance is the result of a unique balance between domestic and international factors that has shaped the defence industrialisation behaviour and policies of the less industrialised states. One of the most important conclusions of the book is that the interplay between domestic and international factors clearly influences the variation in the emerging states defence industrialisation policies as well as their success or failure. While international factors create opportunities they also limit the options available to emerging economies. Domestic factors also play an important role by shaping the policy choices of the states decision makers. Exploring the balance between international and domestic factors and the ways in which they influence defence industrialisation in emerging states *Defence Industries in the 21st Century* will be of great interest to scholars of Defence Industries, Arms Manufacturing and Defence Strategic and Security Studies more generally. The chapters were originally published in *Defence Studies*, *Comparative Strategy* and *All Azimuth* **Supplement to the Official**

Journal of the European Communities ,1996-03-07 *Design of Demining Machines* Dinko Mikulic,2012-10-08 In constant effort to eliminate mine danger international mine action community has been developing safety efficiency and cost effectiveness of clearance methods. Demining machines have become necessary when conducting humanitarian demining where the mechanization of demining provides greater safety and productivity. *Design of Demining Machines* describes the development and testing of modern demining machines in humanitarian demining. Relevant data for design of demining machines are included to explain the machinery implemented and some innovative and inspiring development solutions. Development technologies, companies and projects are discussed to provide a comprehensive estimate of the effects of various design factors and to proper selection of optimal parameters for designing the demining machines. Covering the
