Intergroup Contact Theory
Loris Vezzali, Sofia Stathi, 2016-12-08. Intergroup contact theory has been one of the most influential theories in social psychology since it was first formulated by Gordon Allport in 1954. This volume highlights via a critical lens the most notable recent developments in the field, demonstrating its vitality and its capacity for reinvention and integration with a variety of seemingly distinct research areas. In the last two decades the research focus has been on the variables that explain why contact improves intergroup attitudes and when the contact prejudice relationship is stronger. Current research highlights that contact is not a panacea for prejudice but it can represent a useful tool that can contribute to the improvement of intergroup relations. The book includes coverage of a number of previously under-researched fields which extend the full potential of contact theory within the personality, acculturation, and developmental domains. The chapters also examine the methodological advances in the field and the applied implications. The book offers a rich picture of the state of the field and future directions for research that will be invaluable to students and scholars working in social psychology and related disciplines. It aims to provide fertile ground for the development of new exciting and dynamic research ideas in intergroup relations.
