Virtual And Augmented Architecture Vaa 01 Virtual And Augmented Architecture Vaa 01:

Virtual and Augmented Architecture (VAA'01) Bob Fisher, Kenneth Dawson-Howe, Carol O'Sullivan, 2011-06-27 This book focuses on the use of computer vision and graphics in architecture. It arose from a convergence of several hot topics: 1 visualization of built environments for engineering historical and other purposes; 2 virtual reconstruction of architecture from visual data of existing structures whether via photogrammetric or range sensing techniques; and 3 augmentation of video data of architecture with useful information. The focus here is on architecture and how to present it, enhance its abilities, make it easier to understand, and make it accessible to a larger public. Collective interest in this topic led to the International Symposium on Virtual and Augmented Architecture whose papers are contained in this book. As editors, we were very pleased about how well the different papers chosen gave a nice focus to the topic and conference. It is clear that there are many different research approaches still active in this area; this makes it an exciting time. We hope that this book captures that excitement and succeeds in bringing it to you.

Communicative Constructions and the Refiguration of Spaces

Gabriela B. Christmann, Hubert Knoblauch, Martina Löw, 2022-02-15 The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license. Through a variety of empirical studies, this volume offers fresh insights into the manner in which different forms of communicative action transform urban space. With attention to the methodological questions that arise from the attempt to study such changes empirically, it offers new theoretical foundations for understanding the social construction and reconstruction of spaces through communicative action. Seeing communicative action as the basic element in the social construction of reality and conceptualizing communication not only in terms of the use of language and texts but as involving any kind of objectification such as technologies, bodies, and non-verbal signs, it considers the roles of both direct and mediated or digitized communication. An examination of the conceptualization of the communicative reconstruction of spaces and the means by which this change might be empirically investigated, this book demonstrates the fruitfulness of the notion of refiguration as a means by which to understand the transformation of contemporary societies. As such, it will appeal to sociologists, social theorists, and geographers with interests in social construction and urban space.

Artificial Intelligence for Mathematics Education. Book of Abstracts (AI4ME 2020) Philippe R. Richard, Steven Van Vaerenbergh, M. Pilar Vélez, 2020-10-29 The digital revolution that we have experienced since the last quarter of the twentieth century has had some influence yet to be analysed and extended on the way mathematics is made, taught, and learned. While the rate of innovation in these technologies is growing exponentially, the potential impact of most information technologies on mathematical education remains to be fully exploited. In particular, several authoritative voices point out that the technology that will most likely transform education in the coming years is artificial intelligence (AI). Interestingly, today AI

is mainly associated with technologies to automate tasks and lower costs thus serving primarily the interests of the political administrative industrial and commercial world In this scenario the world of education and more specifically didactics appears at best as a mere user of AI techniques developed in other fields forgetting that AI should play a much more relevant role here serving the human being who is doing his work as a mathematician or who is learning mathematics The AI4ME symposium at the International Centre for Mathematical Meetings CIEM in Castro Urdiales is a space for research and reflection to better understand the interconnected challenges of instrumental learning of mathematics and instrumental mathematics taking advantage of the achievements and opportunities of Artificial Intelligence for Mathematical Education This book of abstracts gathers the summaries of the talks presented at the symposium as well as the conclusions of each of the four thematic groups
