“Virtual River” Data Tables

<http://www.sciencecourseware.org/VirtualRiver>

Record your data as you proceed through “Virtual River” on the charts below. If you do not finish the assignment during class, you will have to start at the beginning of the assignment the next time you go to the web site. So having your previous answers will save a considerable amount of time!

Determining the Average Velocity of a Stream

For each of the four layers use the stop watch to time the movement of particles from one post to the other. The wooden posts are 5.0 meters apart. (Some of the values have been measured and recorded for you.)

Make each measurement twice to the nearest 0.2 seconds. Record your data in the table below. Then record the average of the two times.

Fraction of Depth	Time 1 (sec)	Time 2 (sec)	Average Time (sec)
0.1 D			
0.4 D			
0.6 D	17.2	17.2	17.2
0.8 D	29.8	29.6	29.7

Determining the velocity of a stream from top to bottom.

Converting the time for the particles to move 5.0 meters into the velocity of the stream is easy.

Keep in mind that Velocity is Distance per unit Time ($V = \text{Distance} / \text{Time}$). Record your answer to the nearest 0.01 m/sec.

Fraction of Depth	Distance Traveled	Average Time (sec)	Velocity (= Distance / Time)
0.1 D	5.0 meters	11.9 sec	0.42 m/sec
0.4 D	5.0 m	14.2 sec	m/sec
0.6 D	5.0 m	17.2 sec	m/sec
0.8 D	5.0 m	29.7 sec	0.17 m/sec

Laboratory Exercises for Freshwater Ecology John E. Havel, 2016-03-17 Limnology stream ecology and wetland ecology all share an interdisciplinary perspective of inland aquatic habitats Scientists working in these fields explore the roles of geographic position physical and chemical properties and the other biota on the different kinds of plants and animals living in freshwaters How do these creatures interact with each other and with their physical environment In what ways have humans impacted aquatic habitats By what methods do freshwater ecologists study these environments With this new laboratory manual Havel provides a variety of accessible hands on exercises to illuminate key concepts in freshwater ecology These exercises include a mixture of field trips indoor laboratory exercises and experiments with some portions involving qualitative observations and others more quantitative With the help of this manual students will develop an appreciation for careful techniques used in the laboratory and in the field as well as an understanding of how to collect accurate field notes keep a well organized lab notebook and write clear scientific reports *Selected Water Resources Abstracts*, 1991

Reconstructing Earth's Climate History Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2021-06-25 Reconstructing Earth's Climate History There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science This book addresses these needs by placing you the student at the center of learning In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines making observations developing and testing hypotheses reaching conclusions based on the available data recognizing and acknowledging uncertainty in scientific data and scientific conclusions and communicating your results to others The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice corals speleothems and tree rings These archives have been studied for decades by geoscientists and paleoclimatologists Much like detectives these researchers work to reconstruct what happened in the past as well as when and how it happened based on the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO₂ in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level change in the past and future climate change and life and climate change and

civilization expand the book's examination of the causes and effects of Earth's climate history. In using this book we hope you gain new knowledge, new skills, and greater confidence in making sense of the causes and consequences of climate change. Our goal is that science becomes more accessible to you. Enjoy the challenge and the reward of working with scientific data and results. *Reconstructing Earth's Climate History* Second Edition is an essential purchase for geoscience students at a variety of levels studying paleoclimatology, paleoceanography, oceanography, historical geology, global change, Quaternary science, and Earth system science. Outfalls for Seawater Reverse-Osmosis Desalination Facilities Thomas M. Missimer, Burton Jones, Robert G. Maliva, 2015-04-07. The book assembles the latest research on new design techniques in water supplies using desalinated seawater. The authors examine the diverse issues related to the intakes and outfalls of these facilities. They clarify how and why these key components of the facilities impact the cost of operation and subsequently the cost of water supplied to the consumers. The book consists of contributed articles from a number of experts in the field who presented their findings at the Desalination Intakes and Outfalls workshop held at King Abdullah University of Science and Technology (KAUST) in Saudi Arabia in October 2013. The book integrates coverage relevant to a wide variety of researchers and professionals in the general fields of environmental engineering and sustainable development. **Nuclear Science Abstracts**, 1976

Encyclopedia of Global Change Andrew S. Goudie, 2002. Mapping the relationship between human society and the Earth, the *Encyclopedia of Global Change* is the first general reference guide to the impact of politics, population, economics, and technology on the planet. Containing over 300 original signed articles by distinguished scholars, it is the comprehensive work for this multi-discipline, high-profile field. The *Encyclopedia* synthesizes current knowledge on natural and human-made changes in the Earth's physical, chemical, and biological systems and the effects of these changes on society. Areas such as altered ecosystems, climate change, food supply, water production and consumption, population, and the political impact of global change are covered in detail. And the clearly written articles also include responses to global modification agreements and associations, institutions, policies, biographies, and case studies. Enhanced by 1,500 illustrations, extensive cross-references, bibliographies, and an index, the *Encyclopedia of Global Change* links essential knowledge across many fields: geography, geology, geophysics, atmospheric science, political science, economics, technology, and others in a resource that is both accessible and authoritative. The jargon-free language makes it an excellent work for the professional scholar as well as the interested general reader. **Government Reports Announcements**, 1974-05 **The urban fluvial and hydro-environment system** Jaan H. Fundamentals of Plan Making Edward J. Jepson, Jr., Jerry Weitz, 2015-12-07 Urban and regional planning programs aspire to prepare practitioners to write and implement plans primarily at the local level of government. These programs are very much professional in their aspirations as opposed to research oriented. Yet academic planning programs often place greater emphasis on theory than practice. For decades the planning academy has acknowledged a major disconnect between what the planning academy teaches students and the techniques and skills needed to be a successful professional practitioner. *Fundamentals of Plan Making* will give planning students an understanding of research design as it applies to planning, develop familiarity with various data sources and help them acquire knowledge and the ability to conduct basic planning analyses such as population projections, housing needs assessments, development impact analyses and land use plans. Students will also learn how to implement the various citizen participation methods used by planners and develop an appreciation of the values and roles of practicing planners. In *Fundamentals of Plan Making* Edward Jepson and Jerry Weitz bring their extensive experience as practicing academics and give planning students the practical hands on tools they need to implement the various methods used to create and implement real plans and policies. Its chapters on transportation, housing, environment, economic development and other core development topics also make it a handy reference for planning practitioners.

Energy Research Abstracts, 1992-08 *Time-Series Observations of Ocean Acidification: a Key Tool for Documenting Impacts on a Changing Planet* Abed El Rahman Hassoun, Adrienne J. Sutton, Sam Dupont, Jose Martin Hernandez-Ayon, Xianghui Guo, 2025-04-15 Ocean acidification is a global phenomenon with local effects. Marine ecosystems are facing multiple stressors leading to significant changes. Time series observations are the basis to understand these changes and distinguishing between natural and anthropogenic variability of physical, chemical and biological components of marine environments. Moreover, field monitoring is often neglected as a tool to document the responses of marine organisms and key habitats to ocean acidification. Time series observations of ocean acidification are thus critical to understanding the current threats that the ocean's ecosystems are witnessing and efficiently developing and implementing adaptation and mitigation solutions. Time series dedicated to observing ocean acidification, other stressors as well as biological parameters are the baseline for long term assessment of the ocean's health and for evaluating the efficiency of local and global actions toward achieving climate targets. Therefore the goal of this Research Topic is to highlight the latest research efforts conducted to document ocean acidification patterns and trends and their consequences on marine life. In this issue we will focus on new and old time series stations, efforts to bridge physical, chemical and biological observations and their application for modeling and future projections.
