Visual Perception in Children and Adolescents with

Visual Impairments Jeff C. Rabin, Corinna M. Bauer, Karen Harpster, Raelyn Ottenbreit, 2025-10-16 Visual perception plays a fundamental role in our understanding of the world around us. However, for children and adolescents with visual impairments, this ability is significantly compromised. Understanding the visual perception processes in this population is crucial for their development and overall well-being. The main goal of this Research Topic is to address the gaps in our understanding of visual perception in children and adolescents with visual impairments. We aim to explore the unique challenges they face, identify the specific visual processing deficits that may be present, and propose innovative approaches to support their visual development. By investigating this domain, we can enhance our knowledge of how the visual system adapts and develops in the absence of visual input, ultimately leading to improved support and intervention strategies for these individuals.

Vision and the Brain Amanda Hall Lueck, Gordon Dutton, 2015-04 Cerebral visual impairment, also known as cortical visual impairment or CVI, has become the most common cause of visual impairment in children in the United States and the developed world. *Vision and the Brain* is a unique and comprehensive sourcebook geared especially to professionals in the field of visual impairment, educators, and families who need to know more about the causes and types of CVI and the best practices for working with affected children. Expert contributors from many countries represent education, occupational therapy, orientation and mobility, ophthalmology, optometry, neuropsychology, psychology, and vision science, and include parents of children with CVI. The book provides an in-depth guide to current knowledge about brain-related vision loss in an accessible form to enable readers to recognize, understand, and assess the behavioral manifestations of damage to the visual brain and develop effective interventions based on identification of the spectrum of individual needs. Chapters are designed to help those working with children with CVI ascertain the nature and degree of visual impairment in each child so that they can see and appreciate the world through the child's eyes and ensure that every child is served appropriately.
