### Question 1:

Consider a data set of a binary time series  $\{x_1, x_2, \dots, x_n\}$  with  $x_i \in \{0, 1\}$ . Suppose  $x_i = 1$  if the observation is a success and  $x_i = 0$  if the observation is a failure.

Let  $\theta$  denote the unknown probability that  $x_i = 1$  for any  $i$ . The following questions

are based on the following notation for the unknown parameters:  $\theta$  (unknown),  $\mu$  (sample mean),  $\sigma^2$  (sample variance),  $\sigma$  (sample standard deviation),  $\hat{\theta}$  (MLE),  $\hat{\mu}$  (MLE),  $\hat{\sigma}^2$  (MLE),  $\hat{\sigma}$  (MLE).

**A Companion to Econometric Analysis of Panel Data** Badi H. Baltagi, 2009-06-22 This book is a companion to Baltagi's 2008 leading graduate econometrics textbook on panel data entitled Econometric Analysis of Panel Data 4th Edition The book guides the student of panel data econometrics by solving exercises in a logical and pedagogical manner helping the reader understand learn and apply panel data methods It is also a helpful tool for those who like to learn by solving exercises and running software to replicate empirical studies It works as a complementary study guide to Baltagi 2008 and also as a stand alone book that builds up the reader's confidence in working out difficult exercises in panel data econometrics and applying these methods to empirical work The exercises start by providing some background information on partitioned regressions and the Frisch Waugh Lovell theorem Then it goes through the basic material on fixed and random effects models in a one way and two way error components models basic estimation test of hypotheses and prediction This includes maximum likelihood estimation testing for poolability of the data testing for the significance of individual and time effects as well as Hausman's test for correlated effects It also provides extensions of panel data techniques to serial correlation spatial correlation heteroskedasticity seemingly unrelated regressions simultaneous equations dynamic panel models incomplete panels measurement error count panels rotating panels limited dependent variables and non stationary panels

*Analysis* Christer Thrane, 2019-10-16 This book is an introduction to regression analysis focusing on the practicalities of doing regression analysis on real life data. Contrary to other textbooks on regression, this book is based on the idea that you do not necessarily need to know much about statistics and mathematics to get a firm grip on regression and perform it to perfection. This non-technical point of departure is complemented by practical examples of real life data analysis using statistics software such as Stata, R and SPSS. Parts 1 and 2 of the book cover the basics such as simple linear regression, multiple linear regression, how to interpret the output from statistics programs, significance testing and the key regression assumptions. Part 3 deals with how to practically handle violations of the classical linear regression assumptions, regression modeling for categorical y variables and instrumental variable IV regression. Part 4 puts the various purposes of or motivations for regression into the wider context of writing a scholarly report and points to some extensions to related statistical techniques. This book is written primarily for those who need to do regression analysis in practice and not only to understand how this method works in theory. The book's accessible approach is recommended for students from across the social sciences.

*R for Political Data Science* Francisco Urdinez, Andres Cruz, 2020-11-17 *R for Political Data Science* A Practical Guide is a handbook for political scientists new to R who want to learn the most useful and common ways to interpret and analyze political data. It was written by political scientists thinking about the many real world problems faced in their work. The book has 16 chapters and is organized in three sections. The first on the use of R is for those users who are learning R or are migrating from another software. The second section on econometric models covers OLS, binary and survival models, panel data and causal inference. The third section is a data science toolbox of some of the most useful tools in the discipline: data imputation, fuzzy merge of large datasets, web mining, quantitative text analysis, network analysis, mapping, spatial cluster analysis and principal component analysis. Key features: Each chapter has the most up to date and simple option available for each task assuming minimal prerequisites and no previous experience in R. Makes extensive use of the Tidyverse, the group of packages that has revolutionized the use of R. Provides a step by step guide that you can replicate using your own data. Includes exercises in every chapter for course use or self study. Focuses on practical based approaches to statistical inference rather than mathematical formulae. Supplemented by an R package including all data. As the title suggests, this book is highly applied in nature and is designed as a toolbox for the reader. It can be used in methods and data science courses at both the undergraduate and graduate levels. It will be equally useful for a university student pursuing a PhD, political consultants or a public official, all of whom need to transform their datasets into substantive and easily interpretable conclusions.

**Empirical Development Economics** Måns Söderbom, Francis Teal, Markus Eberhardt, Simon Quinn, Andrew Zeitlin, 2014-10-03 Understanding why so many people across the world are so poor is one of the central intellectual challenges of our time. This book provides the tools and data that will enable students, researchers and professionals to address that issue. *Empirical Development Economics* has been designed as a hands on teaching tool to investigate the

causes of poverty The book begins by introducing the quantitative approach to development economics Each section uses data to illustrate key policy issues Part One focuses on the basics of understanding the role of education technology and institutions in determining why incomes differ so much across individuals and countries In Part Two the focus is on techniques to address a number of topics in development including how firms invest how households decide how much to spend on their children s education whether microcredit helps the poor whether food aid works who gets private schooling and whether property rights enhance investment A distinctive feature of the book is its presentation of a range of approaches to studying development questions Development economics has undergone a major change in focus over the last decade with the rise of experimental methods to address development issues this book shows how these methods relate to more traditional ones Please visit the book s website at [www.empiricalde.com](http://www.empiricalde.com) for online supplements including Stata files and solutions to the exercises *ADVANCED ECONOMETRICS with STATA.
