Management Systems for Process Organizations Thomas Schæl, 1996 As the business environment has become more and more turbulent over the past decade information technology has begun to run into the danger of becoming an impediment rather than a motor of progress In order to deal with the need for rapid continuous change computer science is challenged to develop novel interrelated information and communication technologies and to align them with the social needs of co operating user groups as well as the management requirements of formal organisations Workflow systems are among the most advertised technologies addressing this trend but they mean different things to different people Computer scientists

understand workflows as a way to extract control from application programs thus making them more flexible Bureaucratic organisations and most commercial products perceive them as supporting a linear or branching flow of documents from one workplace to another the next try after the failure of office automation This book takes another perspective that of the modern customer driven and groupwork oriented process organisation Extending the language action perspective from the CSCW field its customer oriented view of workflows enables novel kinds of business process analysis and leads to interesting new combinations of information and co operation technologies Schal's empirical studies show some of the pitfalls resulting from a naive use of these technologies and exemplify ways to get around these pitfalls

Workflow Management Systems and Interoperability Asuman Dogac, Leonid Kalinichenko, Tamer Özsu, Amit Sheth, 2012-12-06 Workflow management systems WFMS are enjoying increasing popularity due to their ability to coordinate and streamline complex organizational processes within organizations of all sizes Organizational processes are descriptions of an organization's activities engineered to fulfill its mission such as completing a business contract or satisfying a specific customer request Gaining control of these processes allows an organization to reengineer and improve each process or adapt them to changing requirements The goal of WFMSs is to manage these organizational processes and coordinate their execution was demonstrated in the first half The high degree of interest in WFMSs of the 1990s by a significant increase in the number of commercial products once estimated to about 250 and the estimated market size in combined 2 billion in 1996 Ensuing maturity product sales and services of about is demonstrated by consolidations during the last year Ranging from mere e mail based calendar tools and flow charting tools to very sophisticated integrated development environments for distributed enterprise wide applications and systems to support programming in the large these products are finding an eager market and opening up important research and development opportunities In spite of their early success in the market place however the current generation of systems can benefit from further research and development especially for increasingly complex and mission critical applications

Business Process Management Mathias Weske, 2012-05-03 Business process management is usually treated from two different perspectives business administration and computer science. While business administration professionals tend to consider information technology as a subordinate aspect in business process management for experts to handle by contrast computer science professionals often consider business goals and organizational regulations as terms that do not deserve much thought but require the appropriate level of abstraction. Matthias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management. To this end he details the complete business process lifecycle from the modeling phase to process enactment and improvement taking into account all different stakeholders involved. After starting with a presentation of general foundations and abstraction models he explains concepts like process orchestrations and choreographies as well as process properties and data dependencies. Finally he presents both traditional and advanced business process management architectures covering for example workflow management systems service oriented architectures and data driven approaches. In addition he shows how standards like WfMC SOAP WSDL and BPEL fit into the picture. This textbook is ideally suited for classes on business process management information systems architecture and workflow management. This 2nd edition contains major updates on BPMN Version 2 process orchestration and process choreographies and the chapter on BPM methodologies has been completely rewritten. The accompanying website www.bpm-book.com contains further information and additional teaching material.

Scholz-Reiter,Eberhard Stickel,2012-12-06 Today information is considered to be a valuable company resource that has to be planned coordinated and documented Business processes need to be treated in the same way Moreover significant potential for improvement may lie in optimizing these processes As a consequence information should be collected and suitably modelled and business processes need to be analyzed and redesigned Business modelling usually deals with different views of a company The data view is concerned with information structures the functional view analyzes tasks and procedures the process view links different functions by analyzing workflows and events triggering them while the organizational view is concerned with the structure of the company under investigation These views should not however be treated in an isolated manner The key to success is to deal with the interaction between them Hence business modelling should provide an integrated view of all relevant informational functional organizational and workflow issues One of the most significant problems results from the complexity of the modelling task Modelling tools are required and are to be used in combination with other close methodologies and applications Suitable generalizations and or new methodologies need to be developed

Tailoring Software Infrastructures Christian Dörner,2010 Today s non tayloristic work environments call for flexible work practices supported by dynamic IT systems Changing and optimising business processes has become an important adaptation mechanism in this context However process models cannot capture every conceivable real life situation and firms software infrastructures often do not provide the flexibility required for supporting design in use through effective tailoring processes The involvement of business users in the continuous redesign of business processes is a beneficial solution for these problems as it enhances decision processes by making specific information available more quickly However involving

business users in these redesign processes requires specific design tools This book presents the development of an environment that enables business users to independently model business processes and workflows The environment reduces the technical skills required for modelling business processes and workflows to enable business users to tailor heterogeneous software infrastructures It also provides improved documentation facilities The facilities add usage related information about Web services to the existing functional metadata which is already included in current Web service standards and workflow modelling tools The environment enables business users to create this usage related information cooperatively which leads to a domain specific documentation of Web services Based on this information it provides an enhanced search system that identifies related services and service functions The evaluation of the environment showed that users had a positive perception of modelling business processes and workflows They considered this to be useful for the visualisation and automation of business processes as well as for the creation of calculations since it could enhance the efficiency and efficacy of their work
