Opportunities and Challenges for Wild Bee Conservation Kris Braman, Michael D. Ulyshen, 2025-01-06 Conserving pollinators in anthropogenic habitats of all descriptions is critically important Often we consider single system dynamics yet pollinators move readily between land uses

so diverse pollinator communities in urban forest or orchard settings e.g. have the potential to benefit neighboring habitats including crops. Pollination services provided by insects and other animals are critical to the reproductive success of many plants in a diversity of environments. Conserving and maintaining a diverse assemblage of wild bees is essential for healthy and functioning ecosystems. In addition, improving conditions for pollinators in urban areas is likely to improve the quality of life for human inhabitants and will provide opportunities for children to develop a sense of connection with nature. Understanding the biology and ecology of wild bees in diverse settings is the foundation of conservation. Therefore, understanding the biology and ecology of wild bees and the factors influencing their abundance and diversity across multiple systems to inform conservation efforts is the goal. Recent advances find that forests and forest remnants are critically important to global pollinator diversity and can enhance pollinator diversity in adjacent areas including crops. This research topic will address the opportunities and challenges for wild bee conservation across diverse land use types.

Ecological Intensification of Natural Resources for Sustainable Agriculture Manoj Kumar Jhariya, Ram Swaroop Meena, Arnab Banerjee, 2021-03-07. Ecological intensification involves using natural resources such as land, water, soil, nutrients, and other biotic and abiotic variables in a sustainable way to achieve high performance and efficiency in agricultural yield with minimal damage to the agroecosystems. With increasing food demand, there is high pressure on agricultural systems. The concept of ecological intensification presents the mechanisms of ensuring high agricultural productivity by restoring the soil health and landscape ecosystem services. The approach involves the replacement of anthropogenic inputs with eco-friendly and sustainable alternatives. Effective ecological intensification requires an understanding of ecosystem services, ecosystem components, and flow of resources in the agroecosystems. Also, awareness of land use patterns, socio-economic factors, and needs of the farmer community plays a crucial role. It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape. The editors critically examined the status of ecological stress in agroecosystems and address the issue of ecological intensification for natural resources management. Drawing upon research and examples from around the world, the book is offering an up-to-date account and insight into the approaches that can be put in practice for poly-cropping systems and landscape-scale management to increase the stability of agricultural production systems to achieve ecological resilience. It further discusses the role of farmer communities and the importance of their awareness about the issues. This book will be of interest to teachers, researchers, climate change scientists, capacity builders, and policymakers. Also, the book serves as additional reading material for undergraduate and graduate students of agriculture, forestry, ecology, agronomy, soil science, and environmental sciences. National and international agricultural scientists, policymakers, will also find this to be a useful read for green future.

Pot-Pollen in Stingless Bee Melittology Patricia Vit, Silvia R.M. Pedro, David W. Roubik, 2018-03-05. This book covers pot-pollen, the other product besides honey stored in cerumen pots by Meliponini. Critical assessment is given of stingless bee and pot-pollen biodiversity in the Americas, Africa,

Asia and Oceania Topics addressed include historical biogeography cultural knowledge bee foraging behavior pollination ecological interactions health applications microbiology the natural history of bee nests and chemical bioactive and individual plant components in stored pollen Pot pollen maintains the livelihoods of stingless bees and provides many interesting biological products that are just now beginning to be understood The Meliponini have developed particular nesting biologies uses of building materials and an architecture for pollen storage Environmental windows provide optimal temperature and availability of pollen sources for success in plant pollination and pollen storage Palynological composition and pollen taxonomy are used to assess stingless honey bee pollination services Pollen processing with microorganisms in the nest modifies chemical composition and bioactivity and confers nutraceutical benefits to the honey and pollen widely relished by native people Humans have always used stingless bees Yet sustainable meliponiculture stingless bee keeping projects have so far lacked a treatise on pot pollen which experts provide in this transdisciplinary groundbreaking volume [Make a Home for Wildlife](#) Charles Fergus,2019-01-01 Make a Home for Wildlife helps you see your property in new ways and is the resource you need to take the sometimes daunting steps to improve the quality of your land According to U S Forest Service 250 million acres of woods and forests in the U S are privately held by 10 million individuals families Whether you live on a quarter acre lot in the suburbs own a 20 acre woodland retreat run a farm of 100 acres or belong to an outdoor club with hundreds or thousands of acres you can make changes to the land improvements that will turn your property into a better home for wildlife Habitat projects can be simple or complex short term or spanning decades Cost can be minimal a few hours of your time spent doing pleasant work in the outdoors or can run into the hundreds or thousands of dollars And there is funding to help landowners make wildlife habitat Focusing on the eastern US from Canada to Florida and west to the Great Plains this book describes basic habitat types forest shrublands grasslands and wetlands and highlights over 150 select native and introduced trees shrubs and plants and explains how they are used or not by wildlife The book includes 100 profiles of prominent and interesting species of insects reptiles amphibians birds and mammals with info on animals and their habitat needs Large and small mammals resident and migratory birds and insects are covered Fergus relates stories of landowners who have made habitat in different states and regions in different ways **Managing biodiversity in agricultural landscapes** Emeritus Professor Nick C. H. Reid,Professor Andrew F. Bennett,Professor G. R. Squire,Professor Theodore Alter,Professor David Johnson,Dr Jane Morrison,Dr Ian Montgomery,Dr Ruth Little,Emeritus Professor Gordon Rausser,Dr Dean Ansell,Dr Liz Lewis-Reddy,Professor Ruurd van Diggelen,Professor Thomas A. Jones,Professor David Lindenmayer,Professor Adrian D. Manning,Professor Christopher R. Dickman,2024-11-05 Provides a comprehensive overview of the key concepts in biodiversity management within agricultural landscapes Considers the role of farmers and rural communities in implementing ecological restoration practices Reviews the importance of habitat and animal rewilding in promoting biodiversity and other key ecosystem services [Optimizing the Delivery of Multiple Ecosystem Goods and](#)

Services in Agricultural Systems Maria A. Tsiafouli, Evangelia G. Drakou, Alberto Orgiazzi, Katarina Hedlund, Karl Ritz, 2017-10-18 Agricultural land is subjected to a variety of societal pressures as demands for food animal feed and biomass production increase with an added requirement to simultaneously maintain natural areas and mitigate climatic and environmental impacts The biotic elements of agricultural systems interact with the abiotic environment to generate a number of ecosystem functions that offer services benefiting humans across many scales of time and space The intensification of agriculture generally reduces biodiversity including that within soil and impacts negatively upon a number of regulating and supporting ecosystem services There is a global need toward achieving sustainable agricultural systems as also highlighted in the United Nations Sustainable Development Goals There is hence a need for management regimes that enhance both agricultural production and the associated provision of multiple ecosystem services The articles of this Research Topic enhance our knowledge of how management practices applied to agricultural systems affect the delivery of multiple ecosystem services and how trade offs between provisioning regulating and supporting services can be handled both above and below ground They also show the diversity of topics that need to be considered within the framework of ecosystem services delivered by agricultural systems from knowledge on basic concepts and newly proposed frameworks to a focus on specific ecosystem types such as grasslands and high nature value farmlands pollinator habitats and soil habitats This diversity of topics indicates the need for broader scope research integrated with targeted scientific research to promote sustainable agricultural practices and to ensure food security

North American Wildland Plants James L. Stubbendieck, Neal M. Bryan, Cheryl D. Dunn, Stephan L. Hatch, 2017-05 North American Wildland Plants contains descriptions of the salient characteristics of the most important wildland plants of North America This comprehensive reference assists individuals with limited botanical knowledge as well as natural resource professionals in identifying wildland plants The two hundred species of wildland plants in this book were selected because of their abundance desirability or poisonous properties Each illustration has been enhanced with labels pointing to key characteristics to facilitate the identification of unknown plants Each plant description includes plant characteristics an illustration of the plant with enlarged parts and a general distribution map for North America Each species description includes nomenclature life span origin season of growth inflorescence flower or spikelet or other reproductive parts vegetative parts and growth characteristics Brief notes are included on habitat livestock losses and historic food and medicinal uses This third edition contains additional refinements in the nomenclature distribution illustrations and descriptions of plants
