us from socioeconomic domination by centralized power Independence means that people organize among themselves in order to meet all of their existential needs which include more than preserving corporal survival It means actualizing a better civil and civic organization and adding to that a civic economic organization explained in my other writings in order to afford every child the support needed to grow as individuated people The genius my father contributed is the means of making consensus based decision making processes a structured organization in conjunction with mutual banking and its production based economy which as an organization must expand or perish That inbuilt expansive component is what distinguishes DESO from all other attempts to create a better lifestyle By forcing decentralization to expand as a structural component consequent of consensus based organization and its mutual banking and its production based economy it will compete with mass centrist society for members because living in real sovereign community provides a better quality of life a better culture I am encouraged that there are people really interested in making this project move into its actualization and that eventuality is nearing My blog <http://decentralizationblog.wordpress.com>

Pauwels, 2017-10-31 For big business in Germany and around the world, Hitler and his National Socialist party were good news. Business was bad in the 1930s, and for multinational corporations, Germany was a bright spot in a world suffering from the Great Depression. As Jacques R. Pauwels explains in this book, corporations were delighted with the profits that came from re-arming Germany and then supplying both sides of the Second World War. Recent historical research in Germany has laid bare the links between Hitler's regime and big German firms. Scholars have now also documented the role of American firms: General Motors, IBM, Standard Oil, Ford, and many others, whose German subsidiaries eagerly sold equipment, weapons, and fuel needed for the German war machine. A key roadblock to America's late entry into the Second World War was behind the scenes: pressure from US corporations seeking to protect their profitable business selling to both sides. Basing his work on the recent findings of scholars in many European countries, and the US, Pauwels explains how Hitler gained and held the support of powerful business interests who found the well-liked one-party fascist government ready and willing to protect the property and profits of big business. He documents the role of the many multinationals in business today who supported Hitler and gained from the Nazi government's horrendous measures. *Steel Odyssey* Ohjoon KWON, JOO Choi, Hae-Geon LEE, 2024-07-15 In this wide-ranging interdisciplinary work, the authors draw on history, anthropology, and materials engineering to present a comprehensive and ambitious examination of the multifaceted roles of iron and steel throughout history and the current and future challenges faced by the steel industry. Ohjoon Kwon, JOO Choi, and Hae-Geon Lee provide readers with an in-depth understanding of the history of iron and steel and their impact on human society from a materials engineering perspective. They begin by describing the characteristics of iron and steel and the history of human use of and interaction with these metals, by compiling the fundamental knowledge necessary to understand iron's unique properties and metallurgical phenomena. Following this, they explain the influence of steel on human society and culture, focusing on the Industrial Revolution and warfare. They also give examples that are rarely discussed elsewhere, such as developments in Asia or iron's influence on thought and philosophy using Confucianism and Marxism as examples. Readers will then be able to apply this contextual knowledge to address the profound impact of emerging challenges, such as global environmental issues and the Fourth Industrial Revolution. Despite the technical nature of this book, all terminology is fully explained to facilitate better comprehension for those who may not possess an engineering education or a direct interest in metallurgy. This book is therefore invaluable, not only as a technical book but also as a guide to the development history of human civilization and its future challenges.
