Mennema, A.J. Quene-Boterbrood, C.L. Plate, 2013-12-11 There is an element of fascination which many people feel about geographical maps because these maps allow fantasies about strange landscapes other peoples travels even adventures Distribution maps depicting the area which a plant or animal species occupies would appear to be less romantic but they are equally able to exercise our imagination or rather to stimulate our

scientific curiosity Some distribution patterns are repeated time and time again although rarely fully identical and with their study comes the inescapable question what is it that determines a plant's area of distribution Almost immediately we find ourselves in the area of ecology for it is the plant's demands of its environment climate soil which determines where it will be able to grow and where not However that is not all there is to it for species as well as landscapes have their history and one needs to be informed about the climate and about the distribution of land and sea in the past for instance before one can understand present distributions This aspect of change in space and time historical plant geography is possibly the most fascinating part of plant geography However this atlas covering a minuscule part of the world is not meant to be primarily a book of historical plant geography It is true that a dynamic aspect is very prominent but this is on the smaller time scale of man made changes which mostly led to impoverishments
