Yasargil Father Of Modern Neurosurgery:

Yasargil M. D. Larry Rogers, 2015-08-22 M Gazi Yasargil Father of Modern Neurosurgery describes Professor Yasargil developing a means of reducing the mortality rates associated with the deadliest of brain pathologies from thirty percent in the mid 1960s to less than two percent It required not only a vastly redesigned microscope but an array of new surgical instruments even a new way of thinking 1967 witnessed neurosurgeons flocking to Zurich from around the world to learn his method Yasargil possessed a truly amazing surgical talent but his brand of microneurosurgery allowed even the lesser skilled to achieve stunning results if the requisite laboratory hours to master the method were observed Yasargil s life and times were as dramatic and challenging as microneurosurgery was important He was born in a cave in rural east Turkey as his parents were held at gunpoint by outlaws determined to challenge the new government in Ankara At eighteen with his family s hearts in their throats he was off to Vienna to study medicine But when Nazi police suspected him of being a Jew he was not allowed to register for classes But instead of returning to Turkey defeated he chose to push into Germany where he bargained enrollment as a first year medical student From 1943 to 1945 he was harassed by Hitler s police as a potential spy Headstrong confident he typically made matters worse The bombs killing some of his classmates were dropped from British and American aircraft Since this story contains as much history and adventure as medical triumph a brief glossary of medical terms make it accessible to anyone reading at the high school level *Principles of Neurosurgery* Forhad H.

Modern Neurosurgical Giants Paul C. Bucy,1986 Henry Cushing , Partial envelope America Harvey Williams Cushing M D April 8 1869 October 7 1939 was an American neurosurgeon and a pioneer of brain surgery and the first to describe Cushing s syndrome He is often called the father of modern neurosurgery Cushing

was born in Cleveland Ohio the son of Bessie Williams and Kirke Cushing a physician whose family came to Hingham Massachusetts as Puritans in the 17th century Harvey Cushing was the youngest of ten children He graduated with an A B degree in 1891 from Yale University where he was a member of Scroll and Key and Delta Kappa Epsilon Phi chapter He studied medicine at Harvard Medical School and earned his medical degree in 1895 Cushing completed his internship at Massachusetts General Hospital and then did a residency in surgery under the guidance of a famous surgeon William Stewart Halsted at the Johns Hopkins Hospital in Baltimore After doing exceptional cerebral surgery abroad under Kocher at Bern and Sherrington at Liverpool he began private practice in Baltimore Here at the age of 32 he was made associate professor of surgery at Johns Hopkins Hospital and at the hospital was placed in full charge of cases of surgery of the central nervous system Yet he found time to write numerous monographs on surgery of the brain and spinal column and to make important contributions to bacteriology He made with Kocher a study of intracerebral pressure and with Sherrington contributed much to the localization of the cerebral centers In Baltimore he developed the method of operating with local anaesthesia and his paper on its use in hernia gave him a European reputation He has also made important contributions to the study of blood pressure in surgery In 1911 he was appointed surgeon in chief at the Peter Bent Brigham Hospital in Boston 3 He became a professor of surgery at the Harvard Medical School starting in 1912 4 In 1913 he was made an honorary F R C S London He was elected a Fellow of the American Academy of Arts and Sciences in 1914 5 In 1915 before the Clinical Congress of Surgeons in Boston he showed the possibility of influencing stature by operating on the pituitary gland During 1917 9 he was director of U S base hospital attached to the British Expeditionary Force in France In 1918 he was made senior consultant in neurological surgery for the American Expeditionary Forces in Europe during World War I He served in the U S Army Medical Corps attaining the rank of Colonel O6 3 In that capacity he treated Lt Edward Revere Osler the son of Sir William Osler who was fatally wounded during the third battle of Ypres From 1933 to 1937 when he retired he worked at Yale University School of Medicine Cushing died on October 7 1939 in New Haven Connecticut from complications of a myocardial infarction He was interred at Lake View Cemetery in Cleveland Interestingly an autopsy performed on Cushing revealed that his brain harbored a colloid cyst of the third ventricle *Memoirs of a Neurosurgeon* James D.

Geissinger,2012-02 In reflecting upon my life as a neurosurgeon perhaps the most salient feature is that period of history involved Trained by men who studied under Harvey Cushing considered the father of neurological surgery we as early third generation neurosurgeons were held to those rigid standards of academic achievement and physical endurance typical of that time The reader first identifies with the young child who dreams of becoming a doctor and then sets out on that long path He then re lives the experiences of the student of medicine and later the rigorous demands placed upon the surgeon in training During the later descriptions of the private practice of brain and spinal surgery the book transitions into an educational experience It presents to the reader a multitude of neurological disorders requiring surgical treatment the relevant surgical

anatomy and the operative techniques involved Often interjected are the intangibles of surgical judgment and philosophy when confronting those in pain or critically ill Of equal importance were the major scientific advancements which occurred during that period of medical history No longer did we have to bore a hole in the skull or inject noxious materials into the head or spinal canal to verify a diagnosis Rather we had been privileged to enjoy the development of such remarkable machines as the ultrasound CAT and MRI Descriptions of these devices among others and their impact on medical practice should prove interesting to the inquisitive reader After 21 years in practice and probably at the height of my career as a surgeon I contracted hepatitis B subsequent to an accidental needle puncture in the operating room Forced to lay down the scalpel I turned to my second childhood dream cattle ranching as an alternative vocation This then becomes a secondary focus of the book A medical colleague after learning of my book expressed an interest in learning the common denominator driving a man to both neurosurgery and ranching One can summarize with the word counterpoise I had always strived to achieve a balance between the in hospital academic precision oriented work of the neurosurgeon and the outdoor physically demanding life of a rancher consummating the total American dream Analogous to surgery I have always enjoyed using my hands in the shop Throughout the book sections have been devoted to various aspects of woodworking and an effort not only to share my enthusiasm but also to expose underlying problems and pitfalls challenges I have encountered in striving to become an artisan of fine furniture The practice of medicine has undergone significant change during my lifetime Not only have I witnessed a burgeoning unsustainable increase in the cost of healthcare but also major changes in the way in which medicine is being practiced in the new millennium Having been a proud product of the Lucky Few generation born between the years 1929 and 1945 I am rightfully able to compare today s practice of medicine with those of the latter half of the 20th century
