American Poetry Bryan Walpert, 2011-09-26 This book examines types of resistance in contemporary poetry to the authority of scientific knowledge tracing the source of these resistances to both their literary precedents and the scientific zeitgeists that helped to produce them Walpert argues that contemporary poetry offers a palimpsest of resistance using as case studies the poets Alison Hawthorne Deming Pattiann Rogers Albert Goldbarth and Joan Retallack to trace the recapitulation of romantic arguments inherited from Keats Shelly and Coleridge which in turn were produced in part in response to Newtonian physics modernist arguments inherited from Eliot and Pound arguments influenced in part by relativity and quantum theory and postmodernist arguments arguments informed by post structuralist theory e g Barthes Derrida Foucault with affinities to arguments for the limitations of science in the philosophy sociology and rhetoric of science Some of these poems reveal the discursive ideologies of scientific language reveal in other words the performativity of scientific language In doing so these poems themselves can also be read as performative acts and therefore as forms of intervention rather than representation Reading Retallack alongside science studies scholar Karen Barad the book concludes by proposing that viewing knowledge as a form of intervention rather than representation offers a bridge between contemporary poetry and science

Giordano Bruno and the Geometry of Language Arielle Saiber, 2017-03-02 Giordano Bruno and the Geometry of Language brings to the fore a sixteenth century philosopher's role in early modern Europe as a bridge between science and literature or more specifically between the spatial paradigm of geometry and that of language Arielle Saiber examines how to invite what Bruno believed to be an infinite universe its qualities and vicissitudes into the world of language Bruno forged a system of figurative vocabularies number form space and word This verbal and symbolic system in which geometric figures are seen to underlie rhetorical figures is what Saiber calls geometric rhetoric Through analysis of Bruno's writings Saiber shows how Bruno's writing necessitates a crafting of space and is in essence a lexicon of spatial concepts This study constitutes an original contribution both to scholarship on Bruno and to the fields of early modern scientific and literary studies It also addresses the broader question of what role geometry has in the formation of any language and literature of any place and time

The Stars of Earth - new and selected poems Emily Grosholz, 2017-10-16 Emily Grosholz weaves elements of philosophy mathematics and the sciences into her experience of the social and natural world to produce wise and cosmopolitan poetry of high lyricism The Stars of Earth starts with new poems chronicling the months of a year lived and observed followed by selections from Grosholz's previous volumes in chronological order This rare treasury spans four decades of Grosholz's acclaimed poetry PRAISE FOR THE STARS OF EARTH Emily Grosholz is a poet of radiant intelligence patient lyricism and meticulous craft She has a gifted naturalist's regard for the living world and wherever she looks that world for its part offers her its poetry With a philosopher's wit and a mathematician's eye for beauty she can link geometry

and physics to the apricot color of a robin's breast She also writes with great empathy for her subjects The Stars of Earth collects four decades of her elegant and excellent work We are lucky to have it Mark Jarman author of The Heronry Compressed on the page then wafting ever outward on wings of imagination fine poetry and fine theorems are first cousins Or more rarely in poems like Emily Grosholz's twins Timid and fluid rainbows Over the nacreous surfaces Of shells on peacock feathers And soap bubbles appear Whenever incident light Reflects off nether and upper Laminae of films one wave train Tagging after another Like a younger sister Read this book Marjorie Senechal author of Shaping Space I admire Emily Grosholz because of the sounds her poems make She is always experimenting even when the results seem effortless The cunning irregularities are what most compel the reader is never allowed to relax The general readers among us are admitted courteously to the civilizing company The heart not as a hackneyed valentine but as a living muscle is always present as pulse and passion The overwhelming sense these poems give is of affirmation Michael Schmidt author of New and Collected Poems The Stars of Earth is that rarest of books Emily Grosholz chronicles everything from love to loss childhood to marriage to parenthood She explores two continents and the minds of scientists artists friends long lost family And as befits a poet philosopher whose pursuits include the philosophy of mathematics she achieves potent mixes of the daily and the deep Nietzschean thought served up in a deli a toddler's first steps along the frail parabolas of love Melissa Balmain author of Walking in on People
