Vertebrate Taphonomy Cambridge Manuals In Archaeology:

Vertebrate Taphonomy R. Lee Lyman, 1994-07-07 Taphonomy studies the transition of organic matter from the biosphere into the geological record. It is particularly relevant to zooarchaeologists and paleobiologists who analyse organic remains in the archaeological record in an attempt to reconstruct hominid subsistence patterns and paleoecological conditions. In this user friendly encyclopedic reference volume for students and professionals R. Lee Lyman, a leading researcher in taphonomy, reviews the wide range of analytical techniques used to solve particular zooarchaeological problems, illustrating these in most cases with appropriate examples. He also covers the history of taphonomic research and its philosophical underpinnings. Logically organised and clearly written, the book is an important update on all previous publications on archaeological faunal remains.

Quantitative Paleozoology R. Lee Lyman, 2008-03-31 Quantitative Paleozoology describes and illustrates how the remains of long dead animals recovered from archaeological and paleontological excavations can be studied and analyzed. The methods range from determining how many animals of each species are represented to determining whether one collection consists of more broken and more burned bones than another. All methods are described and illustrated with data from real collections, while numerous graphs illustrate various quantitative properties.

The Paleoanthropology and Archaeology of Big-Game Hunting John D. Speth, 2010-09-08 Since its inception, paleoanthropology has been closely wedded to the idea that big game hunting by our hominin ancestors arose first and foremost as a means for acquiring energy and vital nutrients. This assumption has rarely been questioned and seems intuitively obvious: meat is a nutrient-rich food with the ideal array of amino acids, and big animals provide meat in large convenient packages. Through new research, the author of this volume provides a strong argument that the primary goals of big game hunting were actually social and political: increasing hunter's prestige and standing, and that the nutritional component was just an added bonus. Through a comprehensive interdisciplinary research approach, the author examines the historical and current perceptions of protein as an important nutrient source, the biological impact of a high protein diet, and the evidence of this in the archaeological record, and provides a compelling reexamination of this long-held conclusion. This volume will be of interest to researchers in Archaeology, Evolutionary Biology, and Paleoanthropology, particularly those studying diet and nutrition.

The Archaeology of Mesoamerican Animals Kitty F. Emery, Christopher M. Gotz, 2013-11-15 Recognition of the role of animals in ancient diet, economy, politics, and ritual is vital to understanding ancient cultures fully, while following the clues available from animal remains in reconstructing environments is vital to understanding the ancient relationship between humans and the world around them. In response to the growing interest in the field of zooarchaeology, this volume presents current research from across the many cultures and regions of Mesoamerica, dealing specifically with the most current issues in zooarchaeological literature. Geographically, the essays collected here index the different aspects of animal use by the indigenous populations of the entire area between the northern borders of

Mexico and the southern borders of lower Central America This includes such diverse cultures as the north Mexican hunter gatherers the Olmec Maya Mixtec Zapotec and Central American Indians The time frame of the volume extends from the earliest human occupation the Preclassic Classic Postclassic and Colonial manifestations to recent times The book s chapters written by experts in the field of Mesoamerican zooarchaeology provide important general background on the domestic and ritual use of animals in early and classic Mesoamerica and Central America but deal also with special aspects of human animal relationships such as early domestication and symbolism of animals and important yet otherwise poorly represented aspects of taphonomy and zooarchaeological methodology Spanish language version also available ISBN 978 1 937040 12 3

Zooarchaeology in Practice Christina M. Giovas,Michelle J. LeFebvre,2017-11-24 Zooarchaeology in Practice unites depth of treatment with broad topical coverage to advance methodological discussion and development in archaeofaunal analysis Through case studies historical accounts and technical reviews authored by leading figures in the field the volume examines how zooarchaeological data and interpretation are shaped by its methods of practice and explores the impact of these effects at varying levels of investigation Contributing authors draw on geographically and taxonomically diverse datasets providing instructive approaches to problems in traditional and emerging areas of methodological concern Readers from specialists to students will gain an extensive sophisticated look at important disciplinary issues that are sure to provoke critical reflection on the nature and importance of sound methodology With implications for how archaeologists reconstruct human behavior and paleoecology and broader relevance to fields such as paleontology and conservation biology Zooarchaeology in Practice makes an enduring contribution to the methodological advancement of the discipline *The Wide Lens in Archaeology* Allan Gilbert,Justin Lev-Tov,Paula Wapnish,2017-06-01 This book honors the memory of Brian Hesse a scholar of Near Eastern archaeology a writer of alliterative and punned publication titles and an accomplished amateur photographer Hesse specialized in zooarchaeology but he influenced a wider range of excavators and ancient historians with his broad interpretive reach He spent much of his career analyzing faunal materials from different countries in the Middle East including Iran Yemen and Israel and his publications covered themes particular to animal bone studies such as domestication ancient market economics as well as broader themes such as determining ethnicity in archaeology The essays in this volume reflect the breadth of his interests Most chapters share an Old World geographic setting focusing either on Europe or the Middle East The topics are diverse with the majority discussing animal bones as was Hesse s specialization but some take a nonfaunal perspective related to the problems with which Hesse grappled The volume is also broad in temporal scope ranging from Neolithic Iran to early Medieval England and it addresses theoretical matters as well as methodological innovations including taphonomy and the history of computers in zooarchaeology Several of the essays are direct revisits to inspirations from or extensions of Hesse s own research All the contributions reflect his intense interest in social questions about antiquity the theme of social archaeology informed much of Brian Hesse s thinking and it is why his

work made such an impact on those working outside his own disciplinary research

Rockshelter Excavations in the East Hamersley Range, Pilbara Region, Western Australia Dawn Cropper, W. Boone Law, 2018-08-13 This volume offers a detailed study of six exceptional rockshelter sites from the inland Pilbara Region of Western Australia Consisting of 18 chapters it is rich with colour photographs illustrations and figures including high resolution images of the rockshelter sites excavations stratigraphic sections cultural features and artefacts **A View to a Kill** Gerrit Leendert Dusseldorp, 2009 The sophistication of Neanderthal behavioural strategies have been the subject of debate from the moment of their recognition as a separate species of hominin in 1856 This book presents a study on Neanderthal foraging prowess Novel ethnographic and primatological insights suggest that increasing dependence on high quality foods such as meat caused the brain to evolve to a large size and thus led to highly intelligent hominins From this baseline the author studies the Neanderthal archaeological record in order to gain insight into the knowledge intensity of Neanderthal hunting behaviour In this research an optimal foraging perspective is applied to Pleistocene bone assemblages According to this perspective foraging success is an important factor in an individuals evolutionary fitness Therefore foraging is organised as efficiently as possible The prey species that were selected and hunted by Neanderthals are analysed The author investigates economic considerations that influenced Neanderthal prey choice These considerations are based on estimates of the population densities of the available prey species and on estimates of the relative difficulty of hunting those species The results demonstrate that when Neanderthals operated within poor environments their prey choice was constrained they were not able to hunt species living in large herds In these environments solitary species were the preferred prey It is striking that Neanderthals successfully focussed on the largest and most dangerous species in poor environments However in richer environments these constraints were lifted and species living in herds were successfully exploited In order to assess the accuracy of this approach bone assemblages formed by cave hyenas are also analysed The combined results of the Neanderthal and hyena analyses show that an optimal foraging perspective provides a powerful tool to increase our understanding of Pleistocene ecology The niches of two social carnivores of similar size which were seemingly similar are

successfully distinguished This result lends extra credence to the conclusions regarding Neanderthal foraging strategies This book contributes to the debate surrounding Neanderthal competence and ability It combines an up to date review of current knowledge on Neanderthal biology and archaeology with novel approaches to the archaeological record It is thus an important contribution to the current knowledge of this enigmatic species [A Consumer's Guide to Archaeological Science](#) Mary E. Malainey, 2010-09-28 Many archaeologists as primarily social scientists do not have a background in the natural sciences This can pose a problem because they need to obtain chemical and physical analyses on samples to perform their research This manual is an essential source of information for those students without a background in science but also a comprehensive overview that those with some understanding of archaeological science will find useful The manual provides readers with the knowledge to use archaeological science methods to the best advantage It describes and explains the analytical techniques in a manner that the average archaeologist can understand and outlines clearly the requirements benefits and limitations of each possible method of analysis so that the researcher can make informed choices The work includes specific information about a variety of dating techniques provenance studies isotope analysis as well as the analysis of organic lipid and protein residues and ancient DNA Case studies illustrating applications of these approaches to most types of archaeological materials are presented and the instruments used to perform the analyses are described Available destructive and non destructive approaches are presented to help archaeologists select the most effective technique for gaining the target information from the sample Readers will reach for this manual whenever they need to decide how to best analyze a sample and how the analysis is performed
