Heterogeneous Catalysts for Clean Technology

Karen Wilson, Adam F. Lee, 2013-09-17 Reactive but not a reactant Heterogeneous catalysts play an unseen role in many of today's processes and products With the increasing emphasis on sustainability in both products and processes this handbook

is the first to combine the hot topics of heterogeneous catalysis and clean technology. It focuses on the development of heterogeneous catalysts for use in clean chemical synthesis dealing with how modern spectroscopic techniques can aid the design of catalysts for use in liquid phase reactions, their application in industrially important chemistries including selective oxidation, hydrogenation, solid acid and base catalyzed processes as well as the role of process intensification and use of renewable resources in improving the sustainability of chemical processes. With its emphasis on applications, this book is of high interest to those working in the industry.

Vibrations at Surfaces R. Caudano, 2012-12-06. This volume contains most of the invited and contributed papers presented at the second international conference devoted to the general topic Vibrations at Surfaces and which took place from 10 to 12 September 1980 at the Facultés Notre Dame de la Paix in Namur, Belgium. The conference was organized to review the large amount of information gathered in this field over the late seventies as a result of the rapid improvements and dissemination of surface spectroscopic techniques such as electron energy loss, infrared and Raman surface spectroscopies. Much time was devoted to Raman spectroscopy of adsorbed molecules. After several years of vivid debate over the causes of the observed large enhancement of Raman cross section, a clearer picture emerges from the papers presented here: the actual value of the enhancement factor does depend in a complicated manner on long range surface roughness, atomic scale roughness and the dielectric properties of the substrate as well as on the electronic structure of the molecule in its adsorbed state. Less controversial are the results obtained with electron energy loss spectroscopy (EELS) and several sessions of the conference were devoted to the approach. As witnessed by the growing number of laboratories using the technique, EELS is now a mature spectroscopic tool for the characterization and analysis of the chemisorption bond.
