Dimensionality Reduction with Unsupervised Nearest Neighbors Oliver Kramer, 2013-05-30 This book is devoted to a novel approach for dimensionality reduction based on the famous nearest neighbor method that is a powerful classification and regression approach. It starts with an introduction to machine learning concepts and a real world application from the energy domain. Then unsupervised nearest neighbors UNN is introduced as efficient iterative method for dimensionality reduction. Various UNN models are developed step by step reaching from a simple iterative strategy for discrete latent spaces to a stochastic kernel based algorithm for learning submanifolds with independent parameterizations. Extensions that allow the embedding of incomplete and noisy patterns are introduced. Various optimization approaches are compared from evolutionary to swarm based heuristics. Experimental comparisons to related methodologies taking into account artificial test data sets and also real world data demonstrate the behavior of UNN in practical scenarios. The book contains numerous color figures to illustrate the introduced concepts and to highlight the experimental results.
