

Toilet Systems - Introduction

At Jabsco we are the world's largest manufacturers and suppliers of small craft marine toilets - so we've built a fair degree of experience in heads systems and their design and installation.

Far and away the most widely used marine toilets are manually operated. Our 29099/29120 series have been the most popular type worldwide over the last ten years. We have now improved them even further with stronger materials, new styling and new features that make them even easier to service and maintain. With modern design and materials manual toilets are easy to install and service, simple and clean to use and offer exceptional value for money. Remember there are two bowl sizes to choose from, and normally even the smallest boats have enough space for the comfort of a full sized toilet (29120 series) for just a little extra cost.

Our line-up range of Quiet Flush, Designer Style and Deluxe Flush electric toilets feature low noise levels, so sleeping guests will not be disturbed when the toilet is used! There are options of either flushing with fresh water from the boat's own supply or with salt, river or lake water from outside the boat. DF and DS Series toilets have domestic style bowls with all pump components hidden from view. Quiet Flush toilets have the pump at the rear of a narrow base and can be installed in more narrow spaces. Three wire controls allow water level to be increased or decreased.

We at Jabsco all understand the importance of keeping the environment clean and free from waste. However, it is unfortunate that there is no internationally accepted legislation to guide us on how to deal with waste from our boat systems. For this reason, Jabsco have produced this guide which details the four most common ways of dealing with toilet waste. It is important to note that your choice of system may be governed by your own national and local rules and regulations.

Discharge waste through a Y-valve directly into a non-restricted area or to a holding tank when within the three mile limit, using the toilet's own pump and an anti-siphon loop.

Collect waste in an on-board holding tank so that you can be discharged later when you are in an unrestricted system using an electric or manual pump.

Collect waste in an on-board holding tank for discharge later to a Shore Station using a diode/suction pump or portable utility pump.

A combination of Option 2 and 3 to give you the flexibility of discharging waste whenever most convenient and without
