They Say Men Do Not Cry, I Cried Louis Ferguson, 2023-06-12 My book is about a man in his seventies who thought he had found lasting love but it was just his thought not a reality and how he dealt with the pain of being rejected things that shape our lives My life is now shaped in my seventies by the difficult changes I wrote about in my book and have made me a better man

History and the Climate Crisis Kate Hawkey, 2023-08-15 History education has a key contribution to make in developing a deeper understanding of the current environmental crisis but its role is too often overlooked When embedded in the school curriculum environmental history adds crucial layers of knowledge to the learning from other subjects and can enable students to make their own informed contributions to one of the most pressing concerns of the 21st century History and the Climate Crisis makes the case for including an environmental focus in the secondary school history curriculum by locating its arguments within established historiographical and revisionist debates It provides much needed subject knowledge in an area that is new for most history teachers The author considers the disciplinary and pedagogical challenges and demonstrates how including an environmental focus can strengthen students disciplinary knowledge She also builds her argument through the use of many examples and offers practical strategies for use in classrooms including developed enquiries suitable for the secondary history curriculum The book focuses on environmental history within a strong subject bound curriculum and will be relevant to teachers academics and policymakers in the UK and internationally

The Evolving Universe GA Mohr, Richard Sinclair,

Edwin Fear,2014-05 This revolutionary book proposes that the universe did not begin with a Big Bang and that it is slowly converging to an equilibrium state Key features of the book include the modern model of the atom How the Earth and Solar System formed Evolution of life on Earth Nucleosynthesis in stars Recent changes in the Solar System the various entities in the universe including black holes quasars and supernovas the interstellar medium the classical theory of relativity Beunker s alternative theory of relativity the Steady State Universe theory the Big Bang theory of the universe is disproved Redshift is caused by cosmic dust not the Doppler Effect and an expanding universe the universe is flat and infinite Cosmic background radiation comes from the interstellar medium not the Big Bang Alternative scientific theories of the universe including cyclic models Religious and alien design theories of creation Were bacteria from space the first life on Earth the new Evolving Universe towards equilibrium model of the universe based on known changes in the last 10 billion years A simple proof of gravitational deflection of light G A Mohr s large curvature correction for Finite Element Analysis Industry and reader comment has included Some provocative and timely issues A huge topic the legendary John Argyris called G A Mohr The greatest scientist in Australia *Old Physics for New* Thomas E. Phipps,2006 From the author of Heretical Verities a study more sharply focused on the sins of relativity theory Where physicists see transcendent beauty Thomas Phipps finds institutionalized ugliness Where field theorists have eyes only for the glitter of Maxwell and Einstein he commends the subtler attractions of the Cinderella of modern electromagnetic theory Heinrich Hertz BOOK JACKET *Everyday Science and Mechanics* ,1932 **Dialog Concerning the Two Chief World Systems - Ptolemaic and Copernican** Galileo Galilei,Albert Einstein,Stillman Drake,2000-01 **Galilei and einstein** Santo Armenia,2019-01-03 We had studied Einstein s Theory of General relativity starting from elementary phenomena together with the Galileo s principle on free fall of bodies that represent his precondition We underlined the discrepancy of Galileo s principle as the mass of the test body is not being subtract from the mass of the earth and because the reciprocal attraction between the bodies has not been evaluated Furthermore we highlight that the free fall takes place along radial vertical lines that are not parallel Finally we verify the consequence of the shape of solid bodies for Galileo s principle and Einstein s theory Archimedes principle and the weighing mass of the bodies Starting from elementary phenomena we study Einstein s theory of general relativity together with Galileo s principle on free fall of bodies that represent his precondition Galileo s principle estimates that all objects fall at a constant acceleration due to gravity regardless of their mass On the contrary we establish the non effectiveness of that Galileo s principle as the mass of the test body is not being subtract from the mass of the earth incorrectly thought to be constant and moreover for not having been evaluated the reciprocal attraction of the bodies superposition of effects Likewise we highlight that the free fall takes place along radial vertical lines that are not parallel We study the shape of solid bodies for which bodies that have the same mass but different shape except from sphere equilateral cylinder and cube when varying their position on the reference plane they have different weight a body a mass a body infinite weight Therefore we verify the

consequence of the shape of solid bodies according to the Galileo's principle that is not effective and for the confutation of Einstein's theory Archimedes principle and the weighing mass of the bodies Translator Termini Salvatore PUBLISHER TEKTIME

Easy Lessons in Einstein Edwin Emery Slosson, 1920

How Einstein got Relativity Wrong John Keyes, 2012-03-23 Einstein's Theory of Relativity states that c is the maximum speed at which all energy matter and information in the universe can travel The theory holds that c is the speed regardless of the motion of the source or the motion of the observer It should have been obvious that the constancy of the speed of light was incorrect or misunderstood Something was wrong with it The original experiments that led to the belief in the constancy of the speed of light were flawed None of this makes any logical sense that light can always travel at exactly the same speed and somehow manage to reach all observers at exactly that same speed without taking into account the motion of the observers This book will offer a more logical theory as an alternative a new theory of reality which adds up both mathematically and logically It will also shed some light on exactly where Einstein went wrong

What's So Special about Special Relativity? David McComb, 2016-01-18 This is the story of two men Galileo Galilei and Albert Einstein Galileo saw what must be true and expressed it as a rule Einstein saw that there had to be an exception to Galileo's rule and had the courage to say so Galileo's rule is what we now call Relativity while Einstein's modification is what we now know as Special Relativity This book explains the consequences of Special Relativity including time dilation the twins paradox and the mass energy equivalence that accounts for the forces which bind nuclei together It then goes on to introduce General Relativity leading on to Einstein's theory of gravity and the concept of black holes

Breakdown of Einstein's Equivalence Principle Andrei G Lebed, 2022-09-27 An equality between inertial and gravitational masses was established by Galileo Galilei more than 400 years ago and was accepted by Albert Einstein as a key point of his theory of gravitation General Relativity The above mentioned equality is called the Equivalence Principle In this pioneering book some unusual situations are described where the Equivalence Principle is theoretically broken and the possible experiments where such breakdowns can be observed are discussed in a brief It is known that in standard situations the Equivalence Principle is extremely well established on Earth and in space in numerous experiments including experiments during the recent space mission MICROSCOPE Therefore this book suggests a real breakthrough in the better understanding of Einstein's gravitational theory and its relation to quantum mechanics which is a definite step towards the so called Theory of Everything This book is recommended for all readers who are interested in gravitation and General Relativity

Challenging the Unchallengeable John D. Frey, 2018-02-02 John D Frey leads readers on a fascinating journey in this book that seeks to prove that Albert Einstein's theory of special relativity is all wrong He begins by sharing an overview of special relativity including its history principles and how these principles bring about time dilation and length contraction The author examines six experiments that show that the theory's claims and principles can disqualify themselves by producing impossible opposing results He also explains how experiments that supposedly have

verified special relativity and its claims actually help prove that the theory is flawed Behind this book was over 10 years of research by the author concerning every aspect of special relativity In addition the author consulted with over 30 professors of physics concerning his ideas and experiments and their feedback was extremely important in the creation of this book Written in everyday nontechnical language the book will make sense to those without a background in physics No matter what you do for a living you can participate in a vital discussion about our universe and join the author in Challenging the Unchallengeable *Albert Einstein's Philosophical Views and the Theory of Relativity* Дмитрий Прохорович Грибанов,1987

Einstein Walter R. Dolen,2015-07-10 **The Relativistic Deduction** Émile Meyerson,1985-02-28 When the author of Identity and Reality accepted Langevin's suggestion that Meyerson identify the thought processes of Einstein's relativity theory he turned from his assured perspective as historian of the sciences to the risky bias of contemporary philosophical critic But Emile Meyerson the epistemologist as historian could not find a more rigorous test of his conclusions from historical learning than the interpretation of Einstein's work unless perhaps he were to turn from the classical revolution of Einstein's relativity to the non classical quantum theory Meyerson captures our sympathy in all his writings the role of the epistemologist is in following the development of science 250 the study of the evolution of reason leads us to see that man does not experience himself reasoning which is carried on unconsciously and as the summation of his empirical studies of the works and practices of scientists reason behaves in an altogether predictable way first by making the consequent equivalent to the antecedent and then by actually denying all diversity in space 202 If logic and to Meyerson the epistemologist is logician is to understand reason then logic proceeds a posteriori And so we are faced with an empirically based Parmenides and as we shall see with an ineliminable irrational within science Meyerson's story written in 1924 is still exciting 60 years later
