Trends In Signal Transduction Research:

Trends in Signal Transduction Research Jennifer N. Meyers, 2007 Signal transduction is any process by which a cell converts one kind of signal or stimulus into another. Processes referred to as signal transduction often involve a sequence of biochemical reactions inside the cell which are carried out by enzymes and linked through second messengers. In many transduction processes an increasing number of enzymes and other molecules become engaged in the events that proceed from the initial stimulus. Responses of cells to environmental signals, toxins, and stressors have profound implications for diverse aspects of human health and disease, including development, cystic fibrosis, diabetes, asthma, heart, autoimmune diseases, and cancer. The delineation of the signal transduction pathways affected in these and other complex human diseases are likely to present new avenues for therapeutic intervention and understanding of human disease mechanisms. **Surface**

New Developments on Signal Transduction Research Masayoshi Yamaguchi, 2013-01-01 Signal transduction plays a pivotal role in cell regulation Hormones cytokines and neurotransmitters bind to their specific receptors in the plasma membranes of cells The receptors of many hormones are coupled to G protein coupled signaling pathways Insulin and growth factors are coupled to receptor linked kinase The second messenger is generated in cells once the first messenger binds to the receptors of plasma membranes Cyclic adenosine monophosphate cyclic AMP inositol 1 3 5 triphosphate IP3 and calcium ion Ca^{2+} have been demonstrated to play a role as a second messenger in cells The pivotal role of Ca^{2+} in cellular regulation was established with the finding of calmodulin and protein kinase C that modulates the effect of Ca^{2+} in the regulation of cellular functions Many receptor classes and their downstream kinases activate Erk Akt Stat Smad NF B and other cascades to regulate gene expression and cellular function This book provides recent research in the study of the new developments in signaling transduction in cells
