Why We Need Nuclear Power The Environmental Case:

Why We Need Nuclear Power Michael H. Fox, 2014-03-03 An argument for nuclear power as an environmentally sound option based on real science and written by a radiation biologist A complete scientific analysis of nuclear power Green Energy Futures: A Big Change for the Good David Elliott, 2015-10-08 What will replace fossil fuel Is there a way forward using renewable energy sources while avoiding nuclear power This book argues that nuclear is unlikely to have much of a role in future and shows that the pro and anti nuclear debate has absorbed too much time and energy over the years This has been to the detriment of a more relevant interesting and increasingly urgent debate over what sort of renewable efficiency mix we need This book engages in that debate exploring the implications of shifting to greener cleaner energy sources Importantly David Elliott argues there is no one green future There is a range of possible options of various types and scales we need to choose amongst them This book offers an overview of the technical economic and environmental issues to help scholars professionals and policy makers involved in discussing those options **Rights-Based Ethics** Marcus

Düwell, Johannes Graf Keyserlingk, Philipp Richter, 2025-09-16 Rights based ethics offer a conceptual framework to address the complex ethical issues of our time This volume combines systematic and historical perspectives on rights based ethics with discussions of a broad range of topics in applied ethics to assess the achievements and limits of rights based approaches The normative concepts of fundamental human rights and human dignity play an essential role in considerations about global justice and international politics However these concepts have not been taken up sufficiently in the standard approaches to normative ethics This volume contends that rights based approaches in ethics not only offer a theoretical framework to explain complex normative concepts but they can also offer answers to some of today's most complex moral questions First the book addresses the conceptual and foundational questions of rights based ethics Second it offers historical and cultural perspectives on rights Third it explores how rights based ethics can address applied issues related to climate change health systems global supply chains and the finance industry This volume will be of interest to scholars and graduate students working in ethics political philosophy philosophy of law and the social sciences The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution ShareAlike CC BY SA 4.0 International license This publication was made possible by generous support of the Open Access monograph funds of the university library of the TU Darmstadt and by generous support of the Institute for Philosophy I at the Faculty of Philosophy and Educational Research of the Ruhr University Bochum **Spies in the Congo** Susan Williams, 2016-08-09 Documents

classes races transnational corporations and nations Repeated claims about the tragedy of the commons and the crisis of capitalism have done little to explain this concentration of land encourage solution building to solve resource depletion or address our current socio ecological crisis The Commons in an Age of Uncertainty presents a new explanation vision and action plan based on the idea of commoning the land The book argues that by commoning the land rather than privatising it we can develop the foundation for prosperity without destructive growth and address both local and global challenges Making the land the most fundamental priority of all commons does not only give hope it also opens the doors to a new world in which economy environment and society are decolonised and liberated *Environmental Case for Nuclear Power* Robert C. Morris,2000-07 Morris a retired chemistry teacher argues against opponents of nuclear power saying they overestimate its danger He compares fossil fuels and nuclear power asserting that nuclear power offers a vast potential improvement over toxic pollution by fossil fuel use while arguing that other alternatives like solar power are inadequate in themselves to support the world s current population Annotation copyrighted by Book News Inc Portland OR **The Basics of Mechanics** John O. Konisky,2016-10-07 How Americans make energy choices why they think locally not globally and how this can shape U S energy and climate change policy How do Americans think about energy Is the debate over fossil fuels highly partisan and ideological Does public opinion about fossil fuels and alternative energies divide along the fault between red states and blue states And how much do concerns about climate change weigh on their opinions In *Cheap and Clean* Stephen Ansolabehere and David Konisky show that Americans are more pragmatic than ideological in their opinions about energy alternatives more unified than divided about their main concerns and more local than global in their approach to energy Drawing on extensive surveys they designed and conducted over the course of a decade in conjunction with MIT s Energy Initiative Ansolabehere and Konisky report that beliefs about the costs and environmental harms associated with particular fuels drive public opinions about energy People approach energy choices as consumers and what is most important to them is simply that energy be cheap and clean Most of us want energy at low economic cost and with little social cost that is minimal health risk from pollution The authors also find that although environmental concerns weigh heavily in people s energy preferences these concerns are local and not global Worries about global warming are less pressing to most than worries about their own city s smog and toxic waste With this in mind Ansolabehere and Konisky argue for policies that target both local pollutants and carbon emissions the main source of global warming The local and immediate nature of people s energy concerns can be the starting point for a new approach to energy and climate change policy **Alternative Long-range Energy Strategies** United States. deeply into politics and society To fight for policy based on evidence The full book is available from 12th May 2012 **Let There Be Light!** Robert S. Office of Nuclear Material Safety and Safeguards. Division of Waste Management and Environmental Protection, 1980 A Bill of Rights for the UK?
