Ireys, 1985 *Social Integration of Young People with Chronic Diseases* Siety A. Baldew-Visser, 1989 **Self-Management of Young People with Chronic Conditions** Jane N. T. Sattoe, AnneLoes van Staa, Sander R. Hilberink, 2021-01-28 This book focuses on young people 12-25 years old growing up with a chronic somatic condition and/or physical disability facing different challenges during their transition to adulthood and to adult healthcare services. Becoming an adult often proves extra challenging for them because the adaptive tasks related to living with a chronic condition can clash with developmental milestones. Finding a good balance and integrating these tasks in daily life is also referred to as self-management. This book addresses self-management and empowerment of young people with chronic conditions as well as the Positive Youth Development concept. It elaborates on theories and approaches and offers a complete overview of self-management interventions for young people with chronic conditions, emphasizing on the tasks of medical emotion and role management. It also elaborates on the roles and tasks of professionals as well as the patient-provider relationship, the shifting roles between young people and their parents, and the role of peer support. This book is unique in its broad view on self-management, i.e. it goes beyond medical management and focuses on young people achieving their maximum potential and a good quality of life. Furthermore, the book employs a positive youth development approach focusing on empowerment and growth rather than problems or issues. It offers an overview of the state of the art and evidence concerning self-management support for young people with various chronic conditions. As such, it is of benefit for all healthcare professionals working in care for young people but also for researchers interested in this topic.

Chronic Illness in Children and Adolescents Ronald T. Brown, Brian P. Daly, Annette U. Rickel, 2007-01-01 Management of chronic illness in children and adolescents often is a multifaceted challenge that requires the attention and expertise of individuals from a variety of disciplines that include psychology, psychiatry, social work, and medicine. The aim of this book is to provide readers with a practical overview of the definitions, characteristics, theories, and models, diagnostic and treatment indications, and relevant aspects and methods of evidence-based psychosocial treatments for chronic illness in children and adolescents. Although treatments and research for chronic conditions are reviewed in general, particular attention is directed at asthma, cancer, cystic fibrosis, diabetes mellitus, and sickle cell disease due to the high incidence of these chronic diseases among children and adolescents. Case vignettes and suggestions for further reading are provided for the interested reader.

Mothers, Young People and Chronic Illness Clare Williams, 2018-10-24 This title was first published in 2003. Although young people are generally very healthy, it has become clear that many of the health behaviours of young people can have serious consequences later in life. This is particularly so with the management of chronic illness, where poor management can result in serious long-term complications. This book explores how gender differentially affects both the ways in which young people manage chronic illness and the ways in which mothers care for their teenage sons and

daughters Until recently where gender and health have been linked the focus has typically been on women rather than men However there is growing interest in the health of men with the recognition that masculinities and health interact in specific sometimes detrimental ways Most books examine either women s or less commonly men s health but the comparative approach proposed reflects a growing academic and empirical trend which aims to develop new theoretical perspectives both on gender and on the relationship between gender and health The book also challenges assumptions that gender is static by exploring the effects of gender at a specific time of transition in the life course The focus on adolescence is important as it is seen by many to be the time when heterosexual values are most powerfully pursued and enforced thus enabling interactions between gender and health to be thrown into relief The approach adopted takes issue with many current ideas about young people which tend to portray them as autonomous individuals acting independently For example in terms of health care for young people with a chronic illness health professionals generally adopt an individualistic approach stressing the importance of independence for young people Rather than seeing young people as purely autonomous this book relocates them within families in transition between childhood and adulthood and acting interdependently with other family members Little is known about the complex deci
