Review of the Proposed Risk Assessment Bulletin from the Office of Management and Budget National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review the OMB Risk Assessment Bulletin, 2007-04-16 Risk assessments are often used by the federal government to estimate the risk the public may face from such things as exposure to a chemical or the potential failure of an engineered structure and they underlie many regulatory decisions Last January the White House Office of Management and Budget OMB issued a draft bulletin for all federal agencies which included a new definition of risk assessment and proposed standards aimed at improving federal risk assessments This National Research Council report written at the request of OMB evaluates the draft bulletin and supports its overall goals of improving the quality of risk assessments However the report concludes that the draft bulletin is fundamentally flawed from a scientific and technical standpoint and should be withdrawn Problems include an overly broad definition of risk assessment in conflict with long established concepts and practices and an overly narrow definition of adverse health effects one that considers only clinically apparent effects to be adverse ignoring other biological changes that could lead to health effects The report also criticizes the draft bulletin for focusing mainly on human health risk assessments while neglecting assessments of technology and engineered structures **A Comprehensive Guide to**

Toxicological Risks of Selected Flame-Retardant Chemicals National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Flame-Retardant Chemicals, 2000-07-06 Ignition of upholstered furniture by small open flames from matches cigarette lighters and candles is one of the leading causes of residential fire deaths in the United States These fires accounted for about 16% of civilian fire deaths in 1996 On average each year since

1990 about 90 deaths primarily of children 440 injuries and property losses amounting to 50 million dollars have resulted from fires caused by the ignition of upholstered furniture by small open flames Certain commercial seating products such as aircraft and bus seats are subject to flammability standards and sometimes incorporate FR treated upholstery cover materials but there is no federal government requirement for residential upholstered furniture and it is generally not treated with FR chemicals It is estimated that less than 0.2% of all U.S. residential upholstery fabric is treated with flame retardant FR chemicals The Consumer Product Safety Act of 1972 created the U.S. Consumer Product Safety Commission CPSC as an independent federal regulatory agency whose mission is to protect the public from unreasonable risks of injury and death associated with consumer products CPSC also administers the Flammable Fabrics Act under which it regulates flammability hazards and the Federal Hazardous Substances Act FHSA which regulates hazardous substances including chemicals In 1993 the National Association of State Fire Marshals petitioned CPSC to issue a performance based flammability standard for upholstered furniture to reduce the risk of residential fires The Commission granted that portion of the petition relating to small open flame ignition risks In response to concerns regarding the safety of FR chemicals Congress in the fiscal year 1999 appropriations report for CPSC requested that the National Research Council conduct an independent study of the health risks to consumers posed by exposure to FR chemicals that are likely to be used in residential upholstered furniture to meet a CPSC standard The National Research Council assigned the project to the Committee on Toxicology COT of the Commission on Life Sciences Board on Environmental Studies and Toxicology COT convened the Subcommittee on Flame Retardant Chemicals which prepared this report Subcommittee members were chosen for their recognized expertise in toxicology pharmacology epidemiology chemistry exposure assessment risk assessment and biostatistics Toxicological Risks of Selected Flame Retardant Chemicals is organized into 18 chapters and two appendices Chapter 2 describes the risk assessment process used by the subcommittee in determining the risk associated with potential exposure to the various FR chemicals Chapter 3 describes the method the subcommittee used to measure and estimate the intensity frequency extent and duration of human exposure to FR chemicals Chapters 4-19 provide the subcommittee's review and assessment of health risks posed by exposure to each of the 16 FR chemicals Data gaps and research needs are provided at the end of these chapters
