Sin embargo son pocos los textos que están especialmente diseñados para la ingeniería informática. Por un lado los textos genéricos de estadística para ingeniería pueden resultar poco atractivos para los estudiantes de informática pues carecen de ejemplos propios de su actividad profesional por lo que resulta difícil situar el contexto de la estadística dentro de la profesión de ingeniería informática. Por otro lado los textos específicos de estadística para informática son en su mayoría extranjeros y no se corresponden con los contenidos que se imparten en la UAL dado que aquí la asignatura de estadística forma parte de las materias básicas y se imparte en primer curso mientras que los textos mencionados suelen centrarse en la aplicación a la ciencia de la computación y se corresponden con un nivel formativo más alto. El objetivo principal de este manual de probabilidad y estadística para ingeniería informática es sintetizar los contenidos correspondientes a la materia básica de estadística de la titulación plasmando la experiencia docente acumulada en algunos casos desde hace casi tres décadas en la materia. Los contenidos teóricos van acompañados de snippets de código en lenguaje R que los estudiantes pueden poner en práctica en sus ordenadores. Se incluyen también numerosos ejercicios resueltos que están enfocados a afianzar los conceptos pero también a permitir la visualización del papel de la materia dentro de la profesión de ingeniero en informática.
